

Figure S2. Translocation of RelA/p65 after TNF α stimulation with/without overexpression of TRIM39 WT or Δ B and Cactin. HEK293T cells were transfected with expression plasmids encoding FLAG-tagged TRIM39 WT or TRIM39 Δ B and Myc-tagged Cactin. Forty-eight h after transfection, the cells were incubated with TNF α (20 ng/ml) for the indicated times. The cytoplasmic extract (Cytosol) and nuclear extract (Nucleus) were fractionated and analyzed by Western blotting with the indicated antibodies.
