

# Postoperative Outcomes After Staged vs. Coordinated Breast Surgery and Bilateral Salpingo-oophorectomy

Benefits of coordinating breast and gynecologic operations in candidates for risk-reducing surgery:

Fewer Surgeries

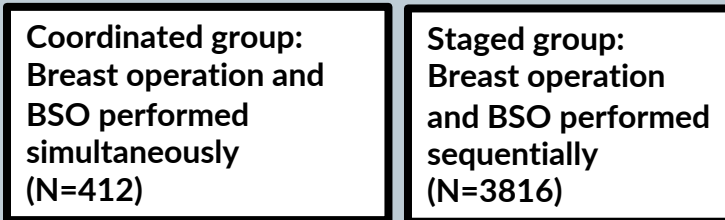

Consolidated Recovery

Less Time Off Work

Are coordinated breast and gynecologic operations safe and cost effective?

Patients in the MarketScan® claims database who underwent both BSO and breast surgery from 2010-2015 (N=4228)

Primary Endpoints:

1. 90-day postoperative complications
2. 2-year postoperative total healthcare charges

Coordinated mastectomy and BSO was associated with:

Higher rates of postoperative complications

Coordinated lumpectomy and BSO was associated with:

Similar rates of postoperative complications

Costs were similar for staged vs coordinated operations
