

Supplementary figure S3

Supplementary figure S3: Phospho-mimicking mutations do not affect TIEG1's ability to homo and heterodimerize. GST pull-down assays were carried out using bacterially expressed GST, or the indicated GST-TIEG1(DBD) mutants, and *in vitro* translated either GFP-TIEG1(DBD) (**A**), full-length HA-Sp1 (**B**), full-length HA-KLF4 (**C**), or full-length HA-KLF11 (**D**). Autoradiographs are presented in the upper panels whereas Coomassie brilliant blue stained SDS-polyacrylamide gels are shown in the lower panels.
