

Table S4. Confusion matrix showing the agreement between the coders (open-ended comments), and the participants' self-report (multiple choice question) for smell loss, i.e. anosmia and hyposmia (S1 and S2 combined). The cross-table shows how many comments were coded as indicating a certain smell disorder (Coder: 1) or not (Coder: 0), and the overlap with the participants' report of having a certain smell disorder (Self-report: 1) or not (Self-report: 0). All "None"-entries were excluded from the analysis.

	Coder: 0	Coder: 1
Self-report: 0	323	530
Self-report: 1	250	987
