

Supplemental Figure S4. Anti-IL-18BP Ab induced immunogenic memory response in E0771 tumor model. (A) E0771 tumor cells were inoculated in C57Bl/6 mice. At tumor volume of 250mm³, mice were randomized (n=10 per group) and either treated with anti-IL-18BP Ab or isotype control (15mg/kg) twice a week for total of 6 treatments. Two months after primary tumor inoculation, mice with no evident residual tumors and tumor-naïve aged-matched mice were re-inoculated with E0771 tumor cells. Representative experiment out of 2 is shown. (B) Individual tumors measurements for each mouse are depicted. (C) Number of CD19⁺ cells per mg spleen. (D) percent of CD44⁺CD62L⁻CD8⁺ effector T cells. Bar graphs show the mean ± SEM; P<0.05* by two-tailed t test.
