

**Table S1. Multivariate Cox incorporating multiple prognostic signatures.**

	95 % Conf.			Hazard =	
	Coefficient	(±)	Std.Error	P	Exp(Coef.)
<i>Kessler gene expression dataset</i>					
essential	-0.037	0.129	0.066	0.57	0.964
70-gene	-0.017	0.177	0.09	0.85	0.983
GGI	0.378	0.204	0.104	<b>0.00028</b>	1.46
<i>Pereira gene expression dataset</i>					
essential	-0.028	0.105	0.053	0.6	0.973
70-gene	-0.053	0.154	0.078	0.5	0.949
GGI	0.401	0.188	0.096	<b>0.000028</b>	1.494
<i>Staaf gene expression dataset</i>					
essential	0.277	0.061	0.031	<b>0.0000011</b>	1.32
70-gene	-0.292	0.061	0.031	<b>0.00000091</b>	0.747
GGI	-0.096	0.06	0.031	<b>0.0019</b>	0.909

essential signature, the 264 genes featured in the present study; 70-gene signature from van't Veer et al. (PMID:11823860); GGI, Genomic Grade Index signature, from Loi et al. (PMID:17401012). For each signature, signature scores are normalized to standard deviations from the median. Adverse event for Kessler dataset is distant metastasis-free survival; for Pereira, disease-specific survival; for Staaf, overall survival.
