

Data in Fig. S2A

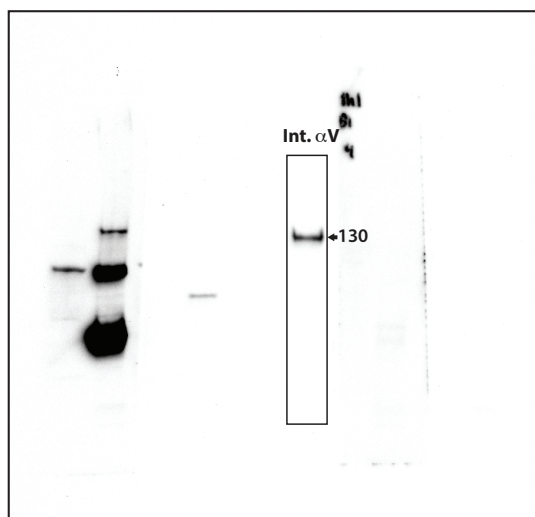

Total protein stain - Amido black
Right after gel transfer. before antibody staining

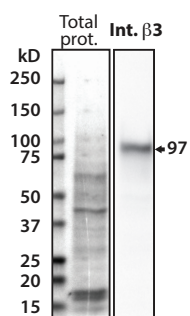

Membrane before exposition,
after antibody staining

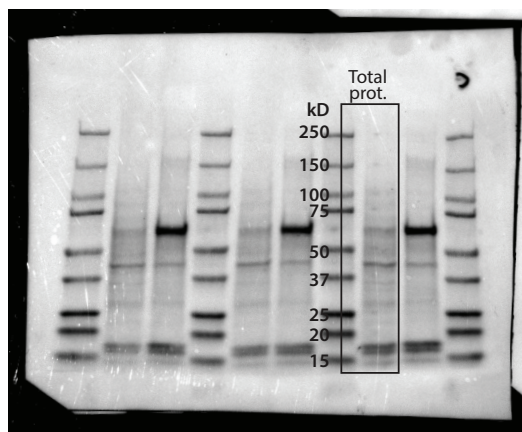

Chemiluminescence

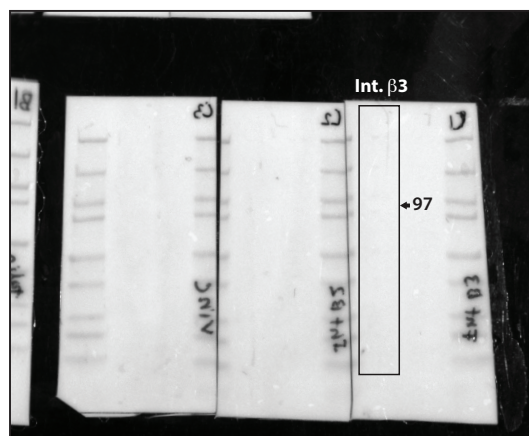

Data in Fig. S2A

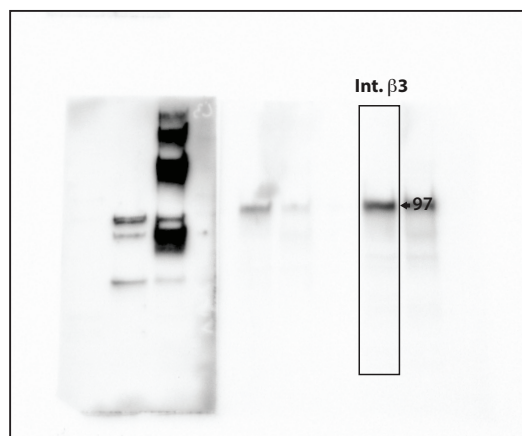

Total protein stain - Amido black
Right after gel transfer. before antibody staining

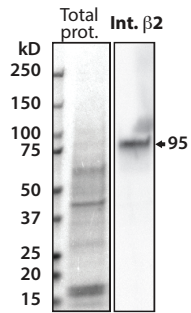

Membrane before exposition,
after antibody staining

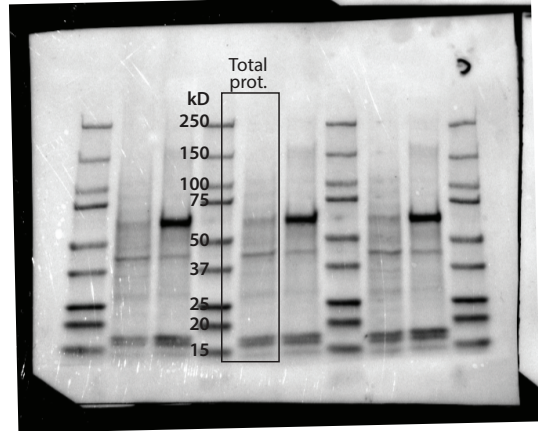

Chemiluminescence

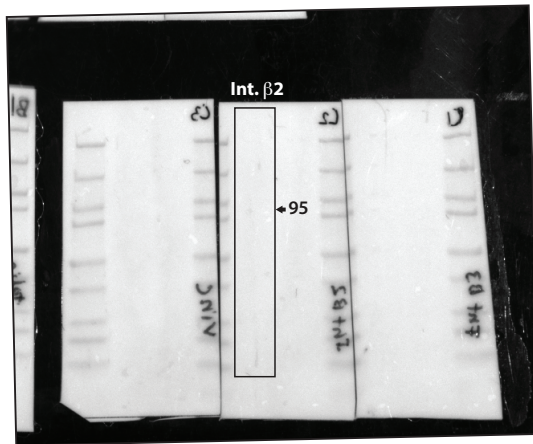

Data in Fig. S2A

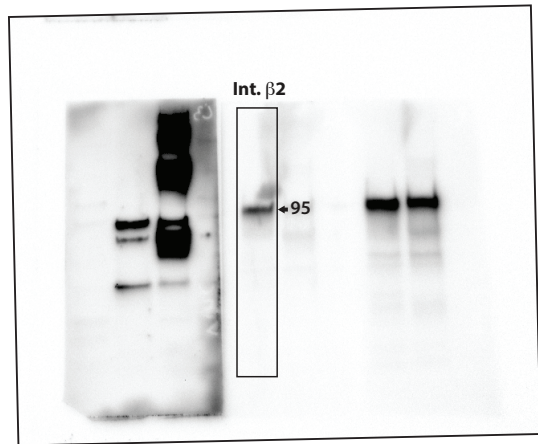

Total protein stain - Amido black
Right after gel transfer. before antibody staining

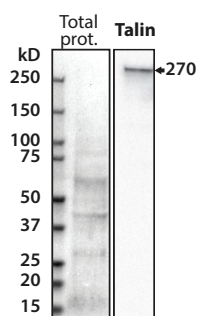

Membrane before exposition,
after antibody staining

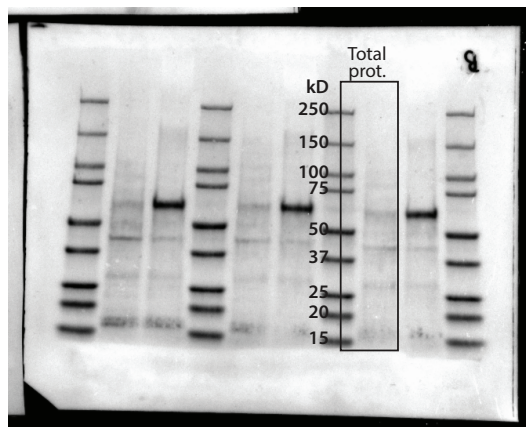

Chemiluminescence

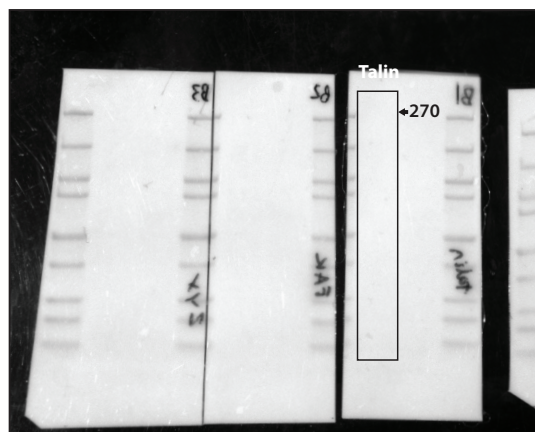

Data in Fig. S2A

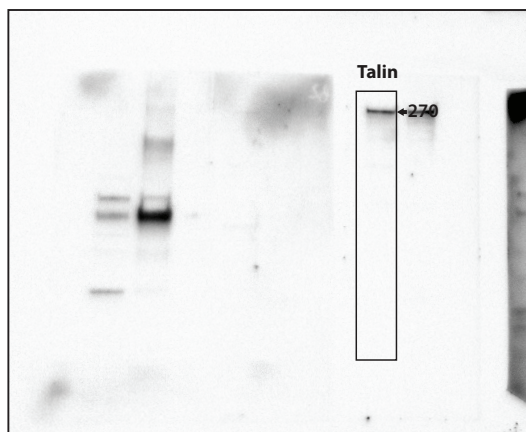

Total protein stain - Amido black
Right after gel transfer. before antibody staining

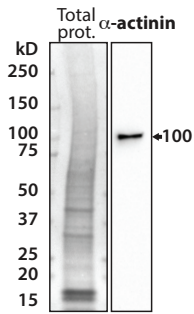

Membrane before exposition,
after antibody staining

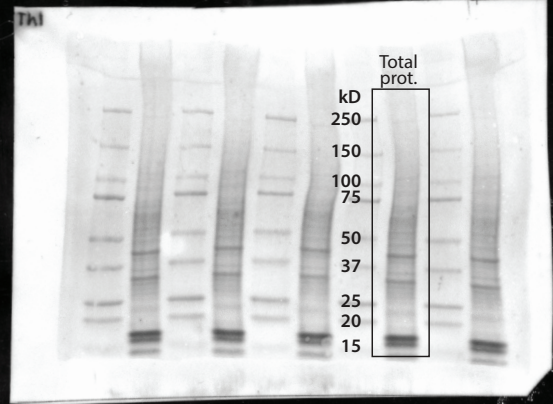

Chemiluminescence

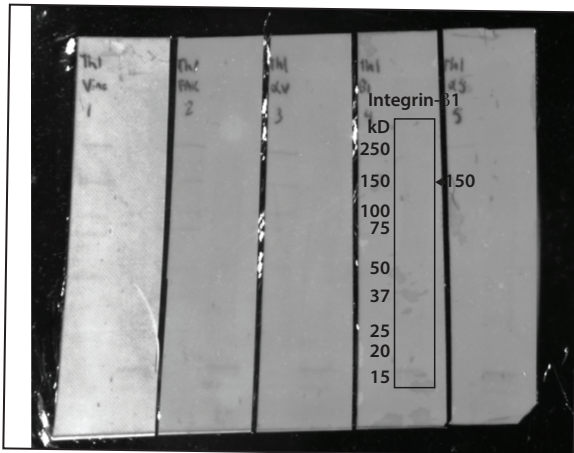

Data in Fig. S2A

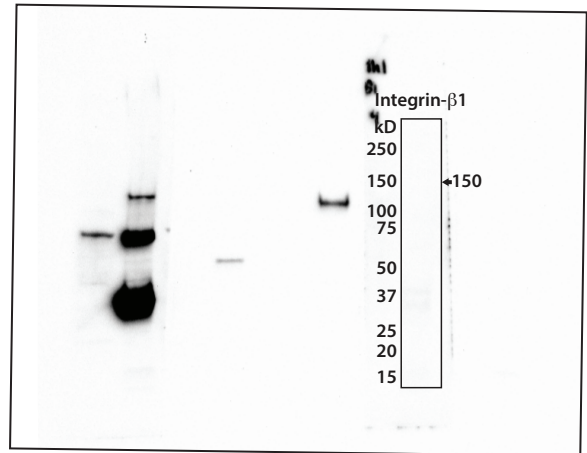

Total protein stain - Amido black
Right after gel transfer. before antibody staining

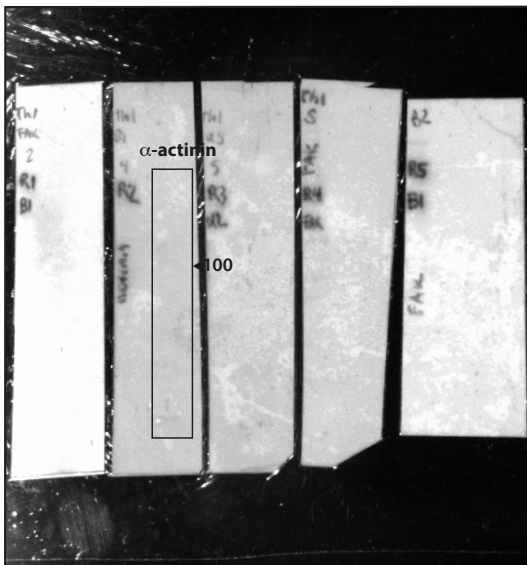

1st blotting- Membrane before exposition,
after antibody staining (for Integrin- β 1)

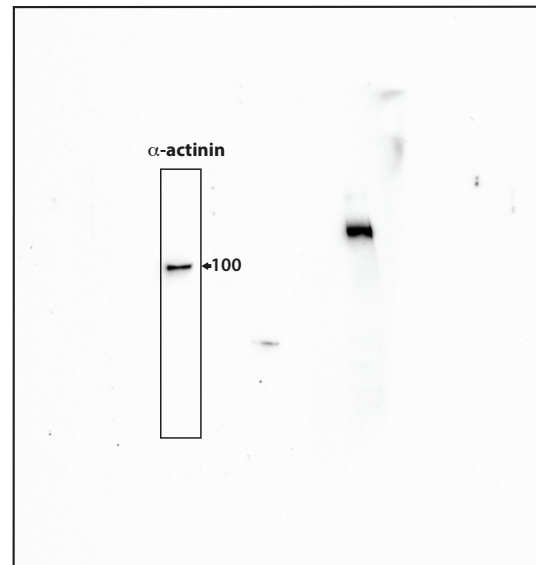

1st blotting-Chemiluminescence
No signal

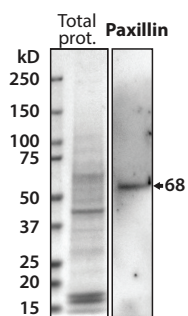

Reblotting- Membrane before exposition,
after stripping and antibody staining

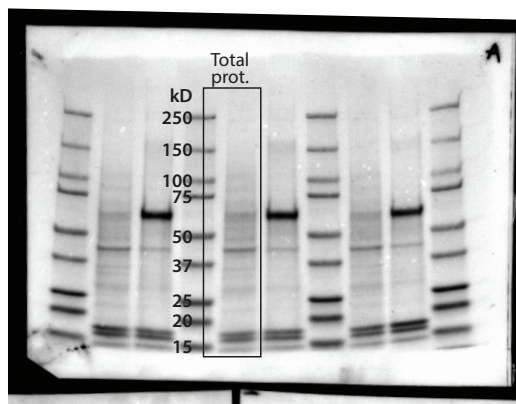

Reblotting-Chemiluminescence

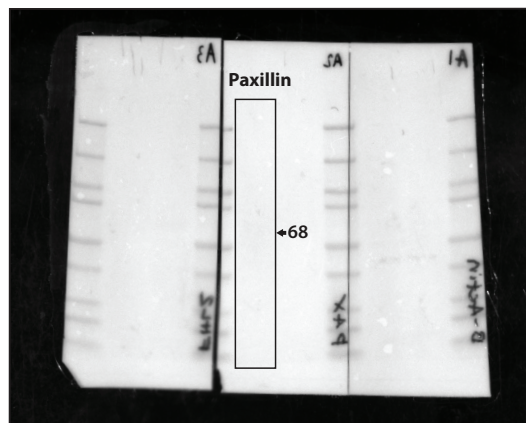

Data in Fig. S2A

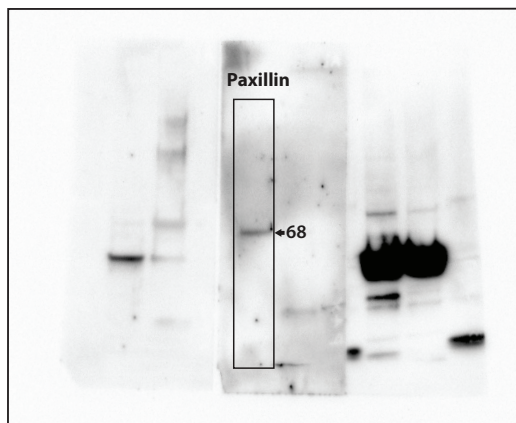

Total protein stain - Amido black
Right after gel transfer. before antibody staining

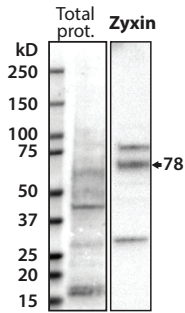

Membrane before exposition,
after antibody staining

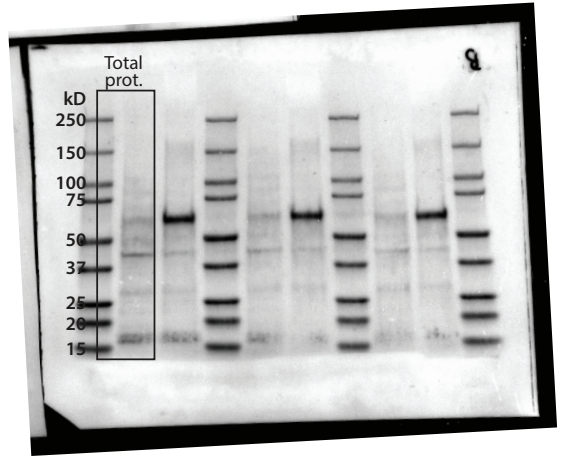

Chemiluminescence

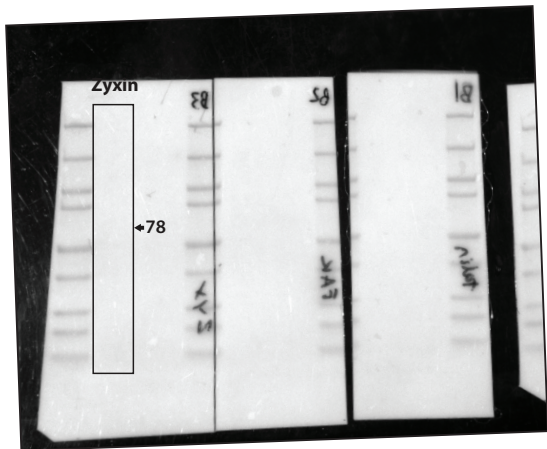

Data in Fig. S2A

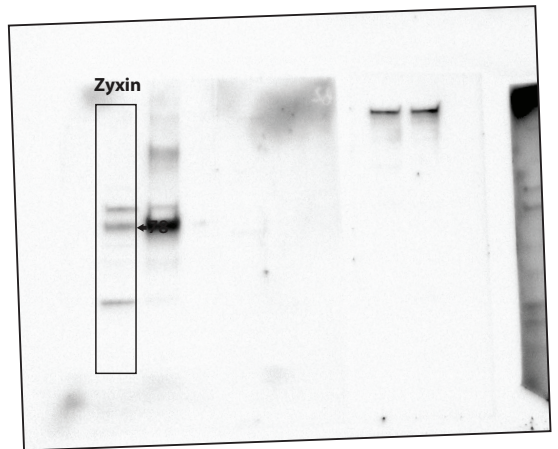

Total protein stain - Amido black
Right after gel transfer. before antibody staining

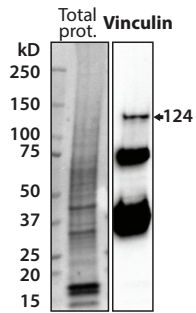

Membrane before exposition,
after antibody staining

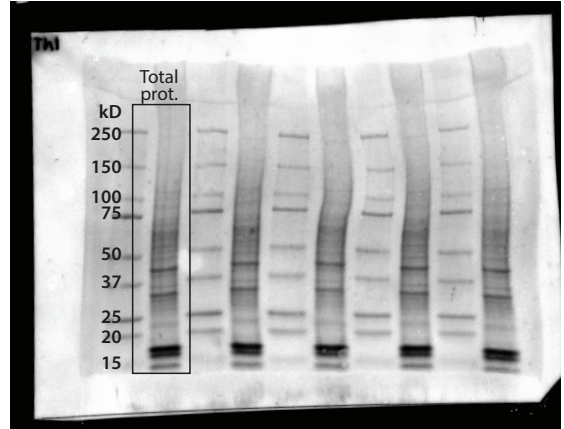

Chemiluminescence

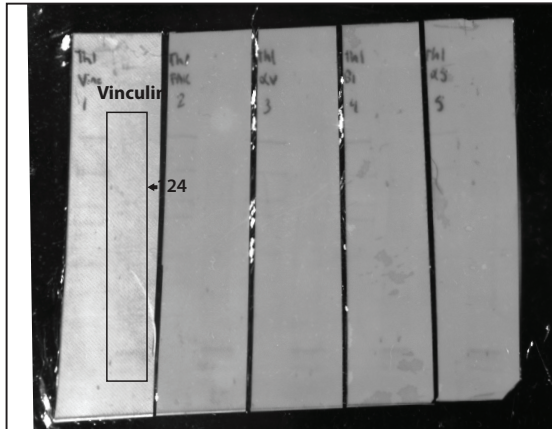

Data in Fig. S2A

Total protein stain - Amido black
Right after gel transfer. before antibody staining

Membrane before exposition,
after antibody staining

Chemiluminescence
