

**Association of triglyceride-glucose index and its related parameters with
atherosclerotic cardiovascular disease: evidence from a 15-year follow-up of
Kailuan cohort**

^a Cox proportional hazard regression model, adjusted for age, gender, monthly income, education level, marital status, current smoking, current drinking, physical activity, and family history of atherosclerotic cardiovascular diseases.

Abbreviations: ASCVD, atherosclerotic cardiovascular diseases; BMI, body mass index; HR (95%CI), hazard ratio (95% confidence interval); IQR, interquartile range; TyG, triglyceride-glucose; WC, waist circumference; WHtR, Waist-to-Height ratio.

Supplementary Table 5. Subgroup analyses of TyG and its related parameters with atherosclerotic cardiovascular disease.

Abbreviations: ASCVD, atherosclerotic cardiovascular disease; BMI, body mass index; HR (95%CI), hazard ratio (95% confidence interval); IQR, interquartile range; TyG, triglyceride-glucose; WC, waist circumference; WHtR, Waist-to-Height ratio.

Supplementary Figure 1. Flow chart of participants included and excluded in the analyses.

Abbreviations: ASCVD, atherosclerotic cardiovascular disease.

Supplementary Figure 2. Restricted cubic spline curves of the association of triglyceride-glucose and its related parameters with atherosclerotic cardiovascular disease and its subtypes.

Abbreviations: ASCVD, atherosclerotic cardiovascular disease; BMI, body mass index; HR (95%CI), hazard ratio (95% confidence interval); IQR, interquartile range; TyG, triglyceride-glucose; WC, waist circumference; WHtR, Waist-to-Height ratio.
