

Supplementary Figure 1 - B-cell lineage percentages

Supplementary Figure 1. Boxplots visualizing the difference in the proportions (%) of B cell lineages between vaccinated (red) and non-vaccinated (blue) patients. **A)** The difference in transitional B cells, naïve B cells and memory B cells. **B)** The difference in Non-isotype switch memory B cells, isotype switch memory B cells, plasmablasts and MZ-like B cells. P-values were calculated using Mann-Whitney U tests and displayed at the top of the boxplots.
* $P < 0.05$
