Reporting Summary

Nature Portfolio wishes to improve the reproducibility of the work that we publish. This form provides structure for consistency and transparency in reporting. For further information on Nature Portfolio policies, see our <u>Editorial Policies</u> and the <u>Editorial Policy Checklist</u>.

For all statistical analyses, confirm that the following items are present in the figure legend, table legend, main text, or Methods section.

<u> </u>				
۲t	at	151	t۱í	$\neg c$

n/a	Со	nfirmed
	X	The exact sample size (n) for each experimental group/condition, given as a discrete number and unit of measurement
	X	A statement on whether measurements were taken from distinct samples or whether the same sample was measured repeatedly
×		The statistical test(s) used AND whether they are one- or two-sided Only common tests should be described solely by name; describe more complex techniques in the Methods section.
x		A description of all covariates tested
x		A description of any assumptions or corrections, such as tests of normality and adjustment for multiple comparisons
	X	A full description of the statistical parameters including central tendency (e.g. means) or other basic estimates (e.g. regression coefficient) AND variation (e.g. standard deviation) or associated estimates of uncertainty (e.g. confidence intervals)
	×	For null hypothesis testing, the test statistic (e.g. <i>F</i> , <i>t</i> , <i>r</i>) with confidence intervals, effect sizes, degrees of freedom and <i>P</i> value noted <i>Give P values as exact values whenever suitable.</i>
x		For Bayesian analysis, information on the choice of priors and Markov chain Monte Carlo settings
×		For hierarchical and complex designs, identification of the appropriate level for tests and full reporting of outcomes
x		Estimates of effect sizes (e.g. Cohen's d , Pearson's r), indicating how they were calculated

Our web collection on <u>statistics for biologists</u> contains articles on many of the points above.

Software and code

Policy information about availability of computer code

Data collection

Data collection and analysis was performed using the following software as detailed in the manuscript and supplementary information. Rate calculations were performed using Microsoft Excel (2016), data was visualized with RStudio version 4.1.3 and Matlab version 2017b. Mass spectrometry data was analyzed using ionOS v.4.04, Look@NanoSIMS version 2018-02-18, and Matlab version 2017b. Metagenomic and metatranscriptomic analysis were performed using trim galore version 0.6.5, MEGAHIT version 1.2.9, anvi'o version 7.1, prodigal version 2.6.3, checkM version 1.2.2, GTDB-tk version 2.2.6, coverM version 0.6.1, minimap2 version 2.2.4, GTDB version 207, IQtree version 2.1.2/2.2.2.7, hmmer version 3.3.2, phyloFlash version 3.3b2, SILVA database (release 138), SPAdes assembler version 3.11.1.

Data analysis

Data collection and analysis was performed using the following software as detailed in the manuscript and supplementary information. Rate calculations were performed using Microsoft Excel (2016), data was visualized with RStudio version 4.1.3 and Matlab version 2017b. Mass spectrometry data was analyzed using ionOS v.4.04, Look@NanoSIMS version 2018-02-18, and Matlab version 2017b. Metagenomic and metatranscriptomic analysis were performed using trim galore version 0.6.5, MEGAHIT version 1.2.9, anvi'o version 7.1, prodigal version 2.6.3, checkM version 1.2.2, GTDB-tk version 2.2.6, coverM version 0.6.1, minimap2 version 2.24, GTDB version 207, IQtree version 2.1.2/2.2.2.7, hmmer version 3.3.2, phyloFlash version 3.3b2, SILVA database (release 138), SPAdes assembler version 3.11.1.

For manuscripts utilizing custom algorithms or software that are central to the research but not yet described in published literature, software must be made available to editors and reviewers. We strongly encourage code deposition in a community repository (e.g. GitHub). See the Nature Portfolio <u>guidelines for submitting code & software</u> for further information.

Data

Policy information about availability of data

All manuscripts must include a data availability statement. This statement should provide the following information, where applicable:

- Accession codes, unique identifiers, or web links for publicly available datasets
- A description of any restrictions on data availability
- For clinical datasets or third party data, please ensure that the statement adheres to our policy

The metagenomics and metatranscriptomic datasets generated in this study have been deposited in the NCBI database under under Bioproject number PRJNA977988 (https://www.ncbi.nlm.nih.gov/bioproject/PRJNA977988/). Publicly available sequences used for phylogenetic tree construction as presented in Supplementary Dataset 1 can be found under their respective accession numbers at NCBI. Source data are provided with this paper.

Additional supplementary datasets include Methylococcales 16S rRNA gene phylogenetic tree, containing partial, metagenome assembled 16S rRNA gene sequences (Supplementary Dataset 1), statistics on methane oxidation and denitrification rates (Supplementary Dataset 2), metagenome-assembled 16S rRNA gene sequences from Lake Zug (Supplementary Dataset 3), raw phyloflash results (Supplementary Dataset 4) and list of genes related to methane oxidation, denitrification and fermentation analyzed in metatranscriptomic and metagenomic datasets (Supplementary Dataset 5).

Research involving human participants, their data, or biological material

Policy information about studies with <u>human participants or human data</u>. See also policy information about <u>sex, gender (identity/presentation), and sexual orientation</u> and <u>race, ethnicity and racism</u>.

Reporting on sex and gender

Use the terms sex (biological attribute) and gender (shaped by social and cultural circumstances) carefully in order to avoid confusing both terms. Indicate if findings apply to only one sex or gender; describe whether sex and gender were considered in study design; whether sex and/or gender was determined based on self-reporting or assigned and methods used.

Provide in the source data disaggregated sex and gender data, where this information has been collected, and if consent has been obtained for sharing of individual-level data; provide overall numbers in this Reporting Summary. Please state if this information has not been collected.

Report sex- and gender-based analyses where performed, justify reasons for lack of sex- and gender-based analysis.

Reporting on race, ethnicity, or other socially relevant groupings

Please specify the socially constructed or socially relevant categorization variable(s) used in your manuscript and explain why they were used. Please note that such variables should not be used as proxies for other socially constructed/relevant variables (for example, race or ethnicity should not be used as a proxy for socioeconomic status).

Provide clear definitions of the relevant terms used, how they were provided (by the participants/respondents, the researchers, or third parties), and the method(s) used to classify people into the different categories (e.g. self-report, census or administrative data, social media data, etc.)

Please provide details about how you controlled for confounding variables in your analyses.

Population characteristics

Describe the covariate-relevant population characteristics of the human research participants (e.g. age, genotypic information, past and current diagnosis and treatment categories). If you filled out the behavioural & social sciences study design questions and have nothing to add here, write "See above."

Recruitment

Describe how participants were recruited. Outline any potential self-selection bias or other biases that may be present and how these are likely to impact results.

Ethics oversight

Identify the organization(s) that approved the study protocol.

Note that full information on the approval of the study protocol must also be provided in the manuscript.

Field-specific reporting

Please select the one below that is the best fit for your research. If you are not sure, read the appropriate sections before making your selection.

Life sciences

Behavioural & social sciences

Ecological, evolutionary & environmental sciences

For a reference copy of the document with all sections, see nature.com/documents/nr-reporting-summary-flat.pdf

Life sciences study design

All studies must disclose on these points even when the disclosure is negative.

Sample size

Describe how sample size was determined, detailing any statistical methods used to predetermine sample size OR if no sample-size calculation was performed, describe how sample sizes were chosen and provide a rationale for why these sample sizes are sufficient.

Data exclusions

Describe any data exclusions. If no data were excluded from the analyses, state so OR if data were excluded, describe the exclusions and the rationale behind them, indicating whether exclusion criteria were pre-established.

Replication

Describe the measures taken to verify the reproducibility of the experimental findings. If all attempts at replication were successful, confirm this OR if there are any findings that were not replicated or cannot be reproduced, note this and describe why.

Randomization

Describe how samples/organisms/participants were allocated into experimental groups. If allocation was not random, describe how covariates were controlled OR if this is not relevant to your study, explain why.

Blinding

Describe whether the investigators were blinded to group allocation during data collection and/or analysis. If blinding was not possible, describe why OR explain why blinding was not relevant to your study.

Behavioural & social sciences study design

All studies must disclose on these points even when the disclosure is negative.

Study description

Briefly describe the study type including whether data are quantitative, qualitative, or mixed-methods (e.g. qualitative cross-sectional, quantitative experimental, mixed-methods case study).

Research sample

State the research sample (e.g. Harvard university undergraduates, villagers in rural India) and provide relevant demographic information (e.g. age, sex) and indicate whether the sample is representative. Provide a rationale for the study sample chosen. For studies involving existing datasets, please describe the dataset and source.

Sampling strategy

Describe the sampling procedure (e.g. random, snowball, stratified, convenience). Describe the statistical methods that were used to predetermine sample size OR if no sample-size calculation was performed, describe how sample sizes were chosen and provide a rationale for why these sample sizes are sufficient. For qualitative data, please indicate whether data saturation was considered, and what criteria were used to decide that no further sampling was needed.

Data collection

Provide details about the data collection procedure, including the instruments or devices used to record the data (e.g. pen and paper, computer, eye tracker, video or audio equipment) whether anyone was present besides the participant(s) and the researcher, and whether the researcher was blind to experimental condition and/or the study hypothesis during data collection.

Timing

Indicate the start and stop dates of data collection. If there is a gap between collection periods, state the dates for each sample cohort.

Data exclusions

If no data were excluded from the analyses, state so OR if data were excluded, provide the exact number of exclusions and the rationale behind them, indicating whether exclusion criteria were pre-established.

Non-participation

State how many participants dropped out/declined participation and the reason(s) given OR provide response rate OR state that no participants dropped out/declined participation.

Randomization

If participants were not allocated into experimental groups, state so OR describe how participants were allocated to groups, and if allocation was not random, describe how covariates were controlled.

Ecological, evolutionary & environmental sciences study design

All studies must disclose on these points even when the disclosure is negative.

Study description

Study to assess the activity of aerobic methane-oxidizing bacteria in the anoxic hypolimnion of a deep, meromictic lake (Lake Zug) in Switzerland. Stable isotope incubation experiments (using 13C-methane and 15N-nitrate) were conducted to measure the potential for methane oxidation in three water depths at and below the oxic-anoxic interface in three consecutive years. These experiments were linked to single cell imaging mass spectrometry using nanoSIMS to identify the microorganisms involved in methane oxidation. Metagenomic and metatranscriptomic datasets from the same water depths as used for the incubation experiments were analyzed for potential metabolic pathways involved in methane oxidation under oxygen-deficient conditions.

Research sample

Water column samples from the anoxic hypolimnion of Lake Zug in Switzerland.

Sampling strategy

Water samples for water column chemistry analysis, stable isotope incubations as well as metagenomic and metatranscriptomic analyses were collected with Niskin bottles that were deployed together with a CTD profiler to record oxygen distributions.

Data collection

Data was collected on board our boat from subsequent CTD/Niskin bottle deployments at different depths by Sina Schorn, Jon S. Graf, Philipp F. Hach, Carsten J. Schubert, and Jana Milucka. For detailed description please refer to the individual sections of the manuscript.

Timing and spatial scale

Sampling was conducted on the 27th of September 2017, the 18th of October 2018, and the 6th of May 2019 and included water sampling from the anoxic hypolimnion (below 120 meters) of Lake Zug.

Data exclusions

The final time point (12 days of incubation) for the methane oxidation stable isotope incubation experiments was excluded from the presented rate calculations due to the exponential nature of the rate, likely due to biological growth within the incubation bottles.

Reproducibility

Incubation experiments were performed in three consecutive years and reflected biological variability in terms of bulk methane oxidation and methane carbon assimilation into biomass.

Randomization	No randomization was performed.		
Blinding	No blinding was used.		
Did the study involve field	work? 🗶 Yes No		
ield work, collect	ion and transport		
Field conditions	Sampling was carried out in September 2017, October 2018, and May 2019, for which day-trips to the lake were conducted. On each of these days the weather was calm allowing sampling on the lake.		
Location	Sampling was conducted on Lake Zug, a meromictic freshwater lake located in Central Switzerland. The exact sampling location was at the deepest point of the lake, located at 47°05'39.1"N 8°28'56.3"E.		
Access & import/export	The lake was accessed with a boat provided by the Swiss Federal Institute of Aquatic Science and Technology (Eawag).		
Disturbance	The sampling included no disturbance other than using the CTD and Niskin bottles to sample the individual water depths.		
Reporting for specific materials, systems and methods require information from authors about some types of materials, experimental systems and methods used in many studies. Here, indicate whether each material, stem or method listed is relevant to your study. If you are not sure if a list item applies to your research, read the appropriate section before selecting a response. Materials & experimental systems Methods Involved in the study Antibodies ChIP-seq Eukaryotic cell lines Palaeontology and archaeology MRI-based neuroimaging Clinical data Dual use research of concern			
□ Plants Antibodies			
Antibodies used	Describe all antibodies used in the study; as applicable, provide supplier name, catalog number, clone name, and lot number.		
Validation	Describe the validation of each primary antibody for the species and application, noting any validation statements on the manufacturer's website, relevant citations, antibody profiles in online databases, or data provided in the manuscript.		
ukaryotic cell line	es es		
olicy information about <u>ce</u>	Il lines and Sex and Gender in Research		
Cell line source(s)	State the source of each cell line used and the sex of all primary cell lines and cells derived from human participants or vertebrate models.		
Authentication	Describe the authentication procedures for each cell line used OR declare that none of the cell lines used were authenticated.		
Mycoplasma contamination	Confirm that all cell lines tested negative for mycoplasma contamination OR describe the results of the testing for mycoplasma contamination OR declare that the cell lines were not tested for mycoplasma contamination.		
Commonly misidentified I (See ICLAC register)			

Palaeontology and Archaeology

Specimen provenance

Provide provenance information for specimens and describe permits that were obtained for the work (including the name of the issuing authority, the date of issue, and any identifying information). Permits should encompass collection and, where applicable, export.

Specimen deposition	Indicate where the specimens have been deposited to permit free access by other researchers.
	7
Dating methods	If new dates are provided, describe how they were obtained (e.g. collection, storage, sample pretreatment and measurement), where they were obtained (i.e. lab name), the calibration program and the protocol for quality assurance OR state that no new dates are provided.
Tick this box to confi	m that the raw and calibrated dates are available in the paper or in Supplementary Information.
thics oversight	Identify the organization(s) that approved or provided guidance on the study protocol, OR state that no ethical approval or guidance was required and explain why not.
e that full information on	the approval of the study protocol must also be provided in the manuscript.
nimals and othe	er research organisms
	tudies involving animals; ARRIVE guidelines recommended for reporting animal research, and Sex and Gender in
aboratory animals	For laboratory animals, report species, strain and age OR state that the study did not involve laboratory animals.
/ild animals	Provide details on animals observed in or captured in the field; report species and age where possible. Describe how animals were caught and transported and what happened to captive animals after the study (if killed, explain why and describe method; if released, say where and when) OR state that the study did not involve wild animals.
eporting on sex	Indicate if findings apply to only one sex; describe whether sex was considered in study design, methods used for assigning sex. Provid data disaggregated for sex where this information has been collected in the source data as appropriate; provide overall numbers in this Reporting Summary. Please state if this information has not been collected. Report sex-based analyses where performed, justify reasons for lack of sex-based analysis.
eld-collected samples	For laboratory work with field-collected samples, describe all relevant parameters such as housing, maintenance, temperature, photoperiod and end-of-experiment protocol OR state that the study did not involve samples collected from the field.
hics oversight	Identify the organization(s) that approved or provided guidance on the study protocol, OR state that no ethical approval or guidance
	was required and explain why not. the approval of the study protocol must also be provided in the manuscript.

Experiments of concern

Doe	s the work involve any of these experiments of concern:
No	Yes
	Demonstrate how to render a vaccine ineffective
	Confer resistance to therapeutically useful antibiotics or antiviral agents
	Enhance the virulence of a pathogen or render a nonpathogen virulent
	Increase transmissibility of a pathogen
	Alter the host range of a pathogen
	Enable evasion of diagnostic/detection modalities
	Enable the weaponization of a biological agent or toxin
	Any other potentially harmful combination of experiments and agents

Plants

Seed stocks

Report on the source of all seed stocks or other plant material used. If applicable, state the seed stock centre and catalogue number. If plant specimens were collected from the field, describe the collection location, date and sampling procedures.

Novel plant genotypes

Describe the methods by which all novel plant genotypes were produced. This includes those generated by transgenic approaches, gene editing, chemical/radiation-based mutagenesis and hybridization. For transgenic lines, describe the transformation method, the number of independent lines analyzed and the generation upon which experiments were performed. For gene-edited lines, describe the editor used, the endogenous sequence targeted for editing, the targeting guide RNA sequence (if applicable) and how the editor

Authentication

was applied. Describe any authentication procedures for each seed stock used or novel genotype generated. Describe any experiments used to assess the effect of a mutation and, where applicable, how potential secondary effects (e.g. second site T-DNA insertions, mosiacism, off-target gene editing) were examined.

ChIP-seq

Data deposition

Confirm that both raw and final processed data have been deposited in a public database such as <u>GEO</u> .		
Confirm that you have deposited or provided access to graph files (e.g. BED files) for the called peaks.		
Data access links May remain private before publication.	For "Initial submission" or "Revised version" documents, provide reviewer access links. For your "Final submission" document, provide a link to the deposited data.	
Files in database submission	Provide a list of all files available in the database submission.	

Genome browser session (e.g. <u>UCSC</u>)

Provide a link to an anonymized genome browser session for "Initial submission" and "Revised version" documents only, to enable peer review. Write "no longer applicable" for "Final submission" documents.

Methodology

Replicates Describe the experimental replicates, specifying number, type and replicate agreement. Describe the sequencing depth for each experiment, providing the total number of reads, uniquely mapped reads, length of reads and Sequencing depth whether they were paired- or single-end. Antibodies Describe the antibodies used for the ChIP-seq experiments; as applicable, provide supplier name, catalog number, clone name, and Peak calling parameters Specify the command line program and parameters used for read mapping and peak calling, including the ChIP, control and index files used. Describe the methods used to ensure data quality in full detail, including how many peaks are at FDR 5% and above 5-fold enrichment. Data quality Software Describe the software used to collect and analyze the ChIP-seq data. For custom code that has been deposited into a community

repository, provide accession details.

Flow Cytometry

Plots	
Confirm that:	
The axis labels state the marke	er and fluorochrome used (e.g. CD4-FITC).
The axis scales are clearly visib	ole. Include numbers along axes only for bottom left plot of group (a 'group' is an analysis of identical markers).
All plots are contour plots with	h outliers or pseudocolor plots.
A numerical value for number	of cells or percentage (with statistics) is provided.
Methodology	
Sample preparation	Describe the sample preparation, detailing the biological source of the cells and any tissue processing steps used.
Instrument	Identify the instrument used for data collection, specifying make and model number.
	Describe the software used to collect and analyze the flow cytometry data. For custom code that has been deposited into a community repository, provide accession details.
	Describe the abundance of the relevant cell populations within post-sort fractions, providing details on the purity of the samples and how it was determined.
	Describe the gating strategy used for all relevant experiments, specifying the preliminary FSC/SSC gates of the starting cell population, indicating where boundaries between "positive" and "negative" staining cell populations are defined.
Tick this box to confirm that a	figure exemplifying the gating strategy is provided in the Supplementary Information.
Magnetic resonance in	naging
Experimental design	
Design type	Indicate task or resting state; event-related or block design.
Design specifications	Specify the number of blocks, trials or experimental units per session and/or subject, and specify the length of each trial or block (if trials are blocked) and interval between trials.
Behavioral performance measure	State number and/or type of variables recorded (e.g. correct button press, response time) and what statistics were used to establish that the subjects were performing the task as expected (e.g. mean, range, and/or standard deviation across subjects).
Acquisition	
Imaging type(s)	Specify: functional, structural, diffusion, perfusion.
Field strength	Specify in Tesla
Sequence & imaging parameters	Specify the pulse sequence type (gradient echo, spin echo, etc.), imaging type (EPI, spiral, etc.), field of view, matrix size, slice thickness, orientation and TE/TR/flip angle.
Area of acquisition	State whether a whole brain scan was used OR define the area of acquisition, describing how the region was determined.
Diffusion MRI Used	☐ Not used
Preprocessing	
, 0	Provide detail on software version and revision number and on specific parameters (model/functions, brain extraction, segmentation, smoothing kernel size, etc.).
	If data were normalized/standardized, describe the approach(es): specify linear or non-linear and define image types used for transformation OR indicate that data were not normalized and explain rationale for lack of normalization.
	Describe the template used for normalization/transformation, specifying subject space or group standardized space (e.g. original Talairach, MNI305, ICBM152) OR indicate that the data were not normalized.
	Describe your procedure(s) for artifact and structured noise removal, specifying motion parameters, tissue signals and physiological signals (heart rate, respiration).

Define your software and/or method and criteria for volume censoring, and state the extent of such censoring.

otatistical modeling a line	chec
Model type and settings	Specify type (mass univariate, multivariate, RSA, predictive, etc.) and describe essential details of the model at the first and second levels (e.g. fixed, random or mixed effects; drift or auto-correlation).
Effect(s) tested	Define precise effect in terms of the task or stimulus conditions instead of psychological concepts and indicate whether ANOVA or factorial designs were used.
Specify type of analysis:	Whole brain ROI-based Both
Statistic type for inference	Specify voxel-wise or cluster-wise and report all relevant parameters for cluster-wise methods.
(See Eklund et al. 2016)	
Correction	Describe the type of correction and how it is obtained for multiple comparisons (e.g. FWE, FDR, permutation or Monte Carlo).
Models & analysis	
n/a Involved in the study Functional and/or effect Graph analysis	tive connectivity
Multivariate modeling of	or predictive analysis

mutual information).

etc.).

Multivariate modeling and predictive analysis

Functional and/or effective connectivity

Graph analysis

Specify independent variables, features extraction and dimension reduction, model, training and evaluation metrics.

Report the measures of dependence used and the model details (e.g. Pearson correlation, partial correlation,

Report the dependent variable and connectivity measure, specifying weighted graph or binarized graph,

subject- or group-level, and the global and/or node summaries used (e.g. clustering coefficient, efficiency,
