Reporting Summary

Nature Portfolio wishes to improve the reproducibility of the work that we publish. This form provides structure for consistency and transparency in reporting. For further information on Nature Portfolio policies, see our <u>Editorial Policies</u> and the <u>Editorial Policy Checklist</u>.

For	all st	atistical analyses, confirm that the following items are present in the figure legend, table legend, main text, or Methods section.
n/a	Cor	nfirmed
	\boxtimes	The exact sample size (n) for each experimental group/condition, given as a discrete number and unit of measurement
	\boxtimes	A statement on whether measurements were taken from distinct samples or whether the same sample was measured repeatedly
\boxtimes		The statistical test(s) used AND whether they are one- or two-sided Only common tests should be described solely by name; describe more complex techniques in the Methods section.
\times		A description of all covariates tested
\boxtimes		A description of any assumptions or corrections, such as tests of normality and adjustment for multiple comparisons
	\boxtimes	A full description of the statistical parameters including central tendency (e.g. means) or other basic estimates (e.g. regression coefficient) AND variation (e.g. standard deviation) or associated estimates of uncertainty (e.g. confidence intervals)
\boxtimes		For null hypothesis testing, the test statistic (e.g. F , t , r) with confidence intervals, effect sizes, degrees of freedom and P value noted Give P values as exact values whenever suitable.
\times		For Bayesian analysis, information on the choice of priors and Markov chain Monte Carlo settings
\times		For hierarchical and complex designs, identification of the appropriate level for tests and full reporting of outcomes
\times		Estimates of effect sizes (e.g. Cohen's d, Pearson's r), indicating how they were calculated
		Our web collection on <u>statistics for biologists</u> contains articles on many of the points above.

Software and code

Policy information about availability of computer code

Data collection

NMR experiments were carried out at 298K on Varian INOVA 600 and 900 MHz spectrometers at the UC Denver NMR Core facility. MST experiments were performed using a Monolith NT.115 instrument. Fluorescence spectra were recorded on a Fluoromax-3 spectrofluorometer. X-ray diffraction data were collected at the ALS 4.2.2 beamline, Berkeley administrated by the Molecular Biology Consortium.

Data analysis

NMRPipe and other software listed in the Methods section. Software for structure determination include iMosflm, CCP4 software suite 7, PHASER and PHENIX v.1.18 as listed in Method section. MST software for calculation of Kd include MO Affinity Analysis as listed in Method section.

For manuscripts utilizing custom algorithms or software that are central to the research but not yet described in published literature, software must be made available to editors and reviewers. We strongly encourage code deposition in a community repository (e.g. GitHub). See the Nature Portfolio guidelines for submitting code & software for further information.

Data

Policy information about availability of data

All manuscripts must include a data availability statement. This statement should provide the following information, where applicable:

- Accession codes, unique identifiers, or web links for publicly available datasets
- A description of any restrictions on data availability
- For clinical datasets or third party data, please ensure that the statement adheres to our policy

The data that support this study are available from the corresponding author upon reasonable request. Coordinates and structure factors have been deposited in the Protein Data Bank under the accession code 8U77 [http://doi.org/10.2210/pdb8U77/pdb].

Research involving human participants, their data, or biological material

Policy information about studies with <u>human participants or human data</u>. See also policy information about <u>sex, gender (identity/presentation)</u>, <u>and sexual orientation</u> and <u>race, ethnicity and racism</u>.

Reporting on sex and gender

Use the terms sex (biological attribute) and gender (shaped by social and cultural circumstances) carefully in order to avoid confusing both terms. Indicate if findings apply to only one sex or gender; describe whether sex and gender were considered in study design; whether sex and/or gender was determined based on self-reporting or assigned and methods used. Provide in the source data disaggregated sex and gender data, where this information has been collected, and if consent has been obtained for sharing of individual-level data; provide overall numbers in this Reporting Summary. Please state if this information has not been collected.

Report sex- and gender-based analyses where performed, justify reasons for lack of sex- and gender-based analysis.

Reporting on race, ethnicity, or other socially relevant groupings

Please specify the socially constructed or socially relevant categorization variable(s) used in your manuscript and explain why they were used. Please note that such variables should not be used as proxies for other socially constructed/relevant variables (for example, race or ethnicity should not be used as a proxy for socioeconomic status).

Provide clear definitions of the relevant terms used, how they were provided (by the participants/respondents, the researchers, or third parties), and the method(s) used to classify people into the different categories (e.g. self-report, census or administrative data, social media data, etc.)

Please provide details about how you controlled for confounding variables in your analyses.

Population characteristics

Describe the covariate-relevant population characteristics of the human research participants (e.g. age, genotypic information, past and current diagnosis and treatment categories). If you filled out the behavioural & social sciences study design questions and have nothing to add here, write "See above."

Recruitment

Describe how participants were recruited. Outline any potential self-selection bias or other biases that may be present and how these are likely to impact results.

Ethics oversight

Identify the organization(s) that approved the study protocol.

Note that full information on the approval of the study protocol must also be provided in the manuscript.

Field-specific reporting

Life sciences study design

Please select the one below that is the best fit for your research. If you are not sure, read the appropriate sections before making your selection.				
☐ Life sciences	Behavioural & social sciences	Ecological, evolutionary & environmental sciences		
For a reference copy of the document with all sections, see nature.com/documents/nr-reporting-summary-flat.pdf				

All studies must disclose on these points even when the disclosure is negative.

Sample size	present in relevant figure legends
Data exclusions	no data exclusions
Replication	present in relevant figure legends
Randomization	no randomization
Blinding	no blinding

Reporting for specific materials, systems and methods

We require information from authors about some types of materials, experimental systems and methods used in many studies. Here, indicate whether each material, system or method listed is relevant to your study. If you are not sure if a list item applies to your research, read the appropriate section before selecting a response.

Materials & experimental systems Methods n/a Involved in the study n/a Involved in the study			
Policy information about ce	ell lines	and Sex and Gender in Research	
Cell line source(s)		Yeast BY4741 yng1 I120D-TAP and BY4741sas3 I118D-TAP cell lines were generated from WT BY4741 purchased from Open Biosystems.	
Authentication		The cell lines used were not authenticated.	
Mycoplasma contaminati	on	Cell lines were not validated.	
Commonly misidentified lines (See ICLAC register)		No commonly misidentified cell lines were used.	
Plants			
Seed stocks		on the source of all seed stocks or other plant material used. If applicable, state the seed stock centre and catalogue number. If pecimens were collected from the field, describe the collection location, date and sampling procedures.	
gene editing, chemical/radiation-based muto number of independent lines analyzed and th the editor used, the endogenous sequence to was applied. Authentication Describe any authentication procedures for e		the the methods by which all novel plant genotypes were produced. This includes those generated by transgenic approaches, diting, chemical/radiation-based mutagenesis and hybridization. For transgenic lines, describe the transformation method, the per of independent lines analyzed and the generation upon which experiments were performed. For gene-edited lines, describe it to used, the endogenous sequence targeted for editing, the targeting guide RNA sequence (if applicable) and how the editor	
		be any authentication procedures for each seed stock used or novel genotype generated. Describe any experiments used to the effect of a mutation and, where applicable, how potential secondary effects (e.g. second site T-DNA insertions, mosiacism,	
ChIP-seq			
Data deposition Confirm that both raw and final processed data have been deposited in a public database such as GEO.			
Confirm that you have deposited or provided access to graph files (e.g. BED files) for the called peaks.			
Data access links May remain private before publication.		ChIP-exo peak files for Taf14, Yng1 and Sas3 generated using Saccharomyces cerevisiae TAP-tagged strains in BY4741 background were downloaded from the gene expression omnibus, accession number GSE147927. ChIPseeker was used to obtain genomic distributions and gene annotations of binding sites in peak list for each factor. gProfiler was then used to identify GO and KEGG enrichments in the list of genes with promoters co-bound by Taf14 and Yng1.	
Files in database submiss	ion	Provide a list of all files available in the database submission.	
Genome browser session (e.g. <u>UCSC</u>)		Provide a link to an anonymized genome browser session for "Initial submission" and "Revised version" documents only, to enable peer review. Write "no longer applicable" for "Final submission" documents.	

Methodology

Replicates

Describe the experimental replicates, specifying number, type and replicate agreement.

Sequencing depth

Describe the sequencing depth for each experiment, providing the total number of reads, uniquely mapped reads, length of reads and whether they were paired- or single-end.

Antibodies

Describe the antibodies used for the ChIP-seq experiments; as applicable, provide supplier name, catalog number, clone name, and lot number.

Peak calling parameters | Specify the command line program and parameters used for read mapping and peak calling, including the ChIP, control and index files used

Data quality Describe the methods used to ensure data quality in full detail, including how many peaks are at FDR 5% and above 5-fold enrichment.

Software Describe the software used to collect and analyze the ChIP-seq data. For custom code that has been deposited into a community repository, provide accession details.
