**Table S4.1: Model Comparison by AICM** (Akaike Information Criterion by MCMC), evaluated with the model selection criterion by AIC of Fabozzi et al., (2014). Best fit model for the data set after AICM is the optimised relaxed clock, birth-death model (in bold).

Model	AICM likelihood	+/-	burn- in	bootstrap replicates	delta AICM
<b>Optimised relaxed clock/Birth-death</b>	<b>432312.4507</b>	<b>2.5475</b>	<b>10</b>	<b>1000</b>	<b>0</b>
Optimised relaxed clock/ Yule	432319.0708	2.5574	10	1000	6.6201
Strict clock/ Birth-death	437771.8470	1.6389	10	1000	5459.3963
Strict clock/ Yule	437764.7433	1.5339	10	1000	5452.2926

**Table S4.2: Comparison divergence-time estimations of major Orchidaceae lineages (subfamilies), the tribe Cymbidieae and subtribe Dipodiinae.** Best fit model for the data set after AICM is the optimised relaxed clock, birth-death model (in bold). Absolute ages in ‘million years ago’ (Ma). MRCA: Most common recent ancestor; HDP: Highest posterior density interval.

MRCA	relaxed clock, Birth-death			relaxed clock, Yule		
	mean ages	95% HDP	95% HDP	mean ages	95% HDP	95% HDP
		lower bound	upper bound		lower bound	upper bound
Orchidaceae	<b>126.35</b>	<b>100.56</b>	<b>155.60</b>	124.24	100.49	152.42
Apostasioideae	<b>101.96</b>	<b>98.01</b>	<b>105.82</b>	101.96	98.18	105.95
Vanilloideae	<b>93.26</b>	<b>89.27</b>	<b>97.05</b>	93.23	89.38	97.13
Cypripedioideae	<b>88.33</b>	<b>84.44</b>	<b>92.37</b>	88.30	84.33	92.37
Orchidoideae	<b>77.71</b>	<b>74.15</b>	<b>81.52</b>	77.71	73.83	81.22
Epidendroideae	<b>77.71</b>	<b>74.15</b>	<b>81.52</b>	77.71	73.83	81.22
