## Supplementary data for adult men with Hodgkin lymphoma treated with chemotherapy and a valid FLZMb-sex questionnaire:

Mean age at diagnosis: 26, range 18-39  
Mean age at inclusion: 27, range 18-41  
Mean follow-up since diagnosis in months: 11, range 2-40

NB: The mean follow-up is 11 months with a range of 2-40 months. All survivors had to have completed primary treatment according to the study inclusion criteria. However, few lymphoma survivors will have completed treatment within two months. Follow-up is stated by survivors themselves, why confusion about date of diagnosis and date of completed treatment can have happened (suggested by the lead author).
