

Supplementary Material 2. Scoping Review Data Extraction Tool

Adapted from the JBI Scoping Review Data Extraction tool²⁰

Scoping Review Details	
Scoping Review title:	Health Professionals implicit bias of patients with low socioeconomic status (SES) and its effects on clinical decision-making: A Systematic Scoping Review
Review objective/s:	To scope the reported impact of HP bias about SES on clinical decision making and its effect on the care for people with lower SES in wider literature
Review question/s:	<ul style="list-style-type: none"> • RQ1: What has been published about implicit SES bias and HP attitudes or behaviours when deciding/providing care. • RQ2: How does SES effect the dynamics of the HP and patient relationship? • RQ3: What recommendations for practice have been postulated, implemented, or evaluated to address HP implicit bias related to SES.
Inclusion/Exclusion Criteria	
Population: Adults	
Concept: SES	
Context: HP decision making	
Types of publication or evidence source	
Evidence source Details and Characteristics	
Citation details (e.g., author/s, date, title, journal, volume, issue, pages)	
Country	
Context – professional group	
Disease group (if applicable)	
Participants (details e.g., age/sex and number)	
SES Terminology used.	
Details/Results extracted from source of evidence	
SES effect on HP and patient relationship	

Page 2 of 2

Implicit biases, attitudes or behaviours that connect SES and decision making	
Healthcare professionals' decision making, and the impact of the decisions made Types of Healthcare professionals, care context and/or setting	
Recommendations for practice to mitigate bias	
Identify how SES was measured in the included papers.
