

Supplementary Figure 1. Comparison of anti-GFP immunofluorescence across LNP GFP injected and control retinas. (A) Anti-GFP immunofluorescence was visualized in flatmounted adult mouse retinas using DAPI (blue) and anti-GFP immunostaining (green) of mouse retinas injected with LNP EGFP 6T, 1xPBS (Diluent), or LNP CRE-recombinase (Control), and of uninjected retinas (No injection). (B) Anti-GFP immunofluorescence was visualized in cross sections of adult mouse retinas using DAPI and anti-GFP immunostaining of mouse retinas injected with LNP GFP 2T, LNP GFP 6T, 1xPBS (Diluent), and of uninjected retinas (No injection). (scale bar: 50 μ m)
