HR, hazard ratio; CI, confidence interval; CA19-9, carbohydrate antigen 19-9; RPC, resectable pancreatic cancer; BRPC, borderline resectable pancreatic cancer.

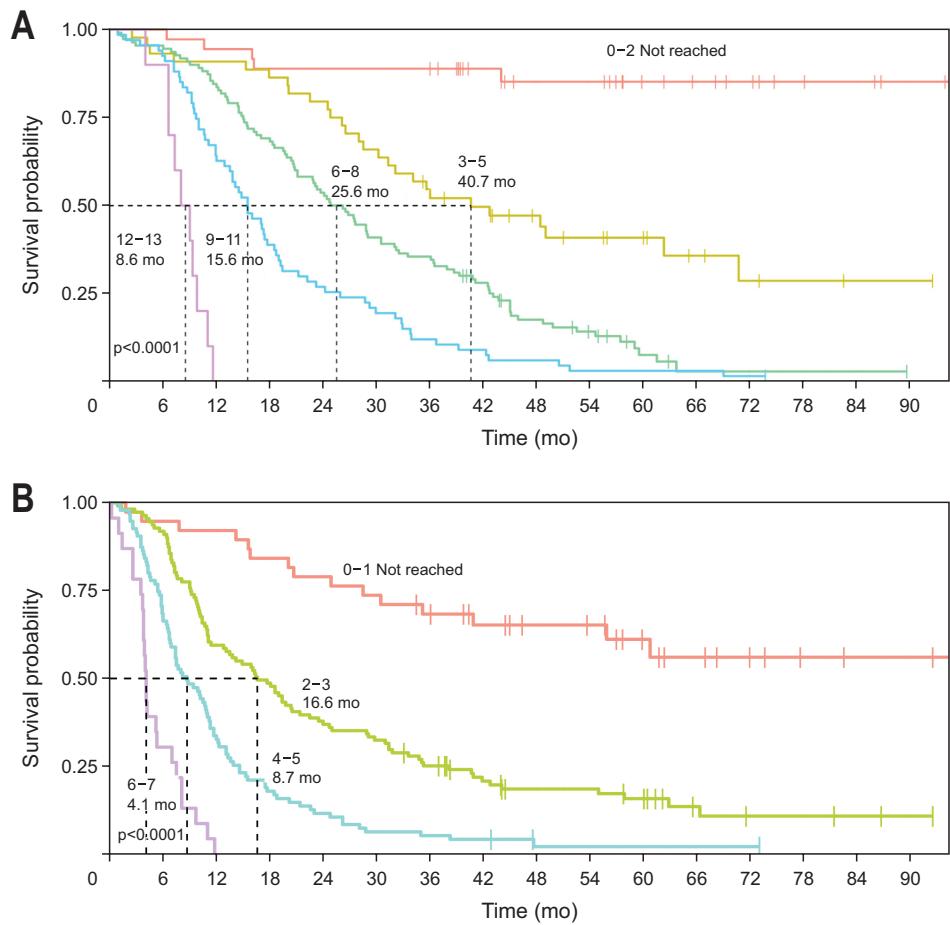

*T and N stage were assessed based on the 8th edition of American Joint Committee on Cancer staging system; [†]Harrell's c-index by bootstrap validation (resampling, n=1,500)=0.709; [‡]The weighted scores were calculated by dividing each β coefficient by the smallest [§]β coefficient (0.477) and rounding to the nearest integer.

Supplementary Table 4. Changes in the Score of the Survival Prediction Score for Recurrence-Free Survival between Two Periods

Total score	3.55±1.74	3.09±1.58	3.30±1.67	0.028

Data are presented as mean±SD.

*T and N stage were assessed based on the 8th edition of American Joint Committee on Cancer staging system.

Supplementary Fig. 1. Survival analysis of patients with pancreatic cancer who underwent upfront surgery in terms of the subgroup according to the total survival prediction score. Kaplan-Meier survival curves for single-center data. (A) Overall survival and (B) recurrence-free survival by subgroup according to the total survival prediction score. For both log-rank tests, p-values were <0.001.
