

IHC-defined subtypes

PAM50 subtypes

Supplementary Figure 1. Expression of G1/S-phase cell cycle genes and transcriptional regulators with basal-like/TNBCs.

The expression of HER2 and ER (ESR1) were evaluated as internal controls for the TNBC subtype. Gene expression analysis of G1/S-phase cell cycle genes cyclin D (CCND1), CDK4, CDK6 and transcriptional regulators CDK7/cyclin H (CCNH) and CDK9/cyclin T (CCNT1) were stratified according to their IHC-defined (top panels) and PAM50 (bottom panels) subtypes (see Figure 1). All *P*-values are compared against the TNBC or Basal-like subtype.
