Table 1. Ingredients of the Investigational Tobacco Products

ITP Name	Dominant Nicotine Form	–(–)Nicotine (mg/g)	Flavoring	Benzoic acid (mg/g)	Glycerol (mg/g)	Propylene Glycol (mg/g)
T5FB	Freebase	50	Tobacco (Ghost Town ^b)	None	700	300
T5NS	Salt-based ^a			37.65		
T1FB	Freebase	10		None		
T1NS	Salt-based			7.53		
M5FB	Freebase	50	Menthol (Yeti ^a)	None	700	300
M5NS	Salt-based			37.65		
M1FB	Freebase	10		None		
M1NS	Salt-based			7.53		

^a Nicotine was protonated with a 2% molar excess of benzoic acid

^b Ghost Town and Yeti are brand names for the ITPs provided to us by Flagship Vapor.

Table 2. Theoretical and measured ingredients in the investigational tobacco products; mean (standard deviation) for replicates (n=3) except for freebase fraction (n=1 pH determination)

Sample ID	Nicotine (% w/w) ^{a,b}		Freebase Nicotine (% of Total Nicotine) ^c		Propylene Glycol (% w/w) ^b		Glycerol (% w/w) ^b		Menthol (% w/w) ^b

M1FB	1.00	1.01 (0.00)	100	95.7	30.00	29.88 (0.22)	60.00	62.45 (0.20)	1.00	0.97 (0.00)
M1NS	1.00	0.98 (0.00)	0	0.3	30.00	29.47 (0.08)	60.00	61.55 (0.26)	1.00	0.70 (0.03)

^a % (w/w) = weight of chemical / weight of e-liquid.

^b Analyzed using quantitative nuclear magnetic resonance as described in Crenshaw et al., 2016.¹

^c 10g of HPLC grade deionized water was added to 1g of e-liquid solution. The mixture was stirred for 15 minutes and the pH was measured. The freebase fraction was calculated using the Henderson-Hasselbalch equation.

ND = not detected

eTable 3. Participant Characteristics and Tobacco Use History by Number of Visit Preference

	5 Visits (n=21)	9 Visits (n=66)	
	Mean (SD) or No. (%)	Mean (SD) or No. (%)	p-value
Age	21.9 (1.0)	22.5 (1.4)	0.05
Female sex assigned at birth	12 (57.1%)	39 (59.1%)	0.87
Race/ethnicity ^a			0.91
Hispanic	1 (4.8%)	5 (7.6%)	
Non-Hispanic Black	1 (4.8%)	3 (4.6%)	
Non-Hispanic White	16 (76.2%)	52 (78.8%)	
Other (e.g., multiple races)	3 (14.3%)	6 (9.1%)	
E-cigarette use characteristics			
Days of use during the past 30 days	28.6 (3.2)	27.0 (6.8)	0.71
Years of regular e-cigarette use ^b	3.4 (2.2)	3.3 (2.1)	0.74
Current regular e-cigarette use ^b	21 (100.0%)	63 (96.9%)	1.00
Average Puffs per Day	68.8 (42.3)	82.8 (104.6)	0.74

Tobacco	0 (0.0%)	0 (0.0%)	
Menthol or Mint	10 (47.6%)	24 (36.9%)	
Other flavor	11 (52.4%)	41 (63.1%)	
Nicotine Form ^c			0.59
Nicotine Salts	15 (71.4%)	51 (77.3%)	
Unknown	6 (28.6%)	15 (22.7%)	
Nicotine Concentration, % ^c			
Other tobacco use characteristics			
Ever smoking of a cigarette	20 (95.2%)	55 (83.3%)	0.28
Ever regular cigarette smoking ^a	4 (19.1%)	16 (24.6%)	0.77
Ever use of a cigar	14 (66.7%)	31 (47.7%)	0.13
Ever use of a pipe	5 (23.8%)	11 (16.9%)	0.52
Ever use of cigarillos	5 (23.8%)	30 (46.2%)	0.07
Ever use of little cigars	2 (9.5%)	7 (10.8%)	1.00
Ever use of smokeless tobacco	5 (23.8%)	17 (26.2%)	0.83
Ever use of snus	0 (0.0%)	6 (9.2%)	0.33
Ever use of hookah	11 (52.4%)	36 (55.4%)	0.81

^aEthnicity was self-reported as ‘Hispanic or Latino’ or ‘Not Hispanic or Latino’. Race was self-reported as ‘American Indian/Alaskan Native,’ ‘Asian,’ ‘Black or African American,’ ‘Native Hawaiian or Other Pacific Islander,’ ‘White or Caucasian,’ and ‘Other,’ with multiple choices allowed. The ‘Other’ category includes non-Hispanic American Indian, Asian, and Pacific Islander. ^bThe regular use of a product was defined as using it for at least once a week, for at least a month. ^cCharacteristics of e-liquids brought to visit 1. The research staff determined the nicotine form by examining pictures of the participants’ usual e-cigarette brands. Brands using cartridges or pods filled with nicotine salts, such as JUUL, Hyde, Elf bar and Breeze Pro, were categorized as nicotine salts, whereas devices designed for user-supplied e-liquid, such as Vapresso and Caliburn, were categorized as unknown.

eTable 4. Participant Characteristics and Tobacco Use History

	All Enrolled (n=87)	Used study e-liquids ^a (n=72)	Did not use study e-liquids ^a (n=15)	p-value
	Mean (SD) or No. (%)	Mean (SD) or No. (%)	Mean (SD) or No. (%)

5 Visits	21 (24.1%)	19 (26.4%)	2 (13.3%)	
9 Visits	66 (75.9%)	53 (73.6%)	13 (86.7%)	

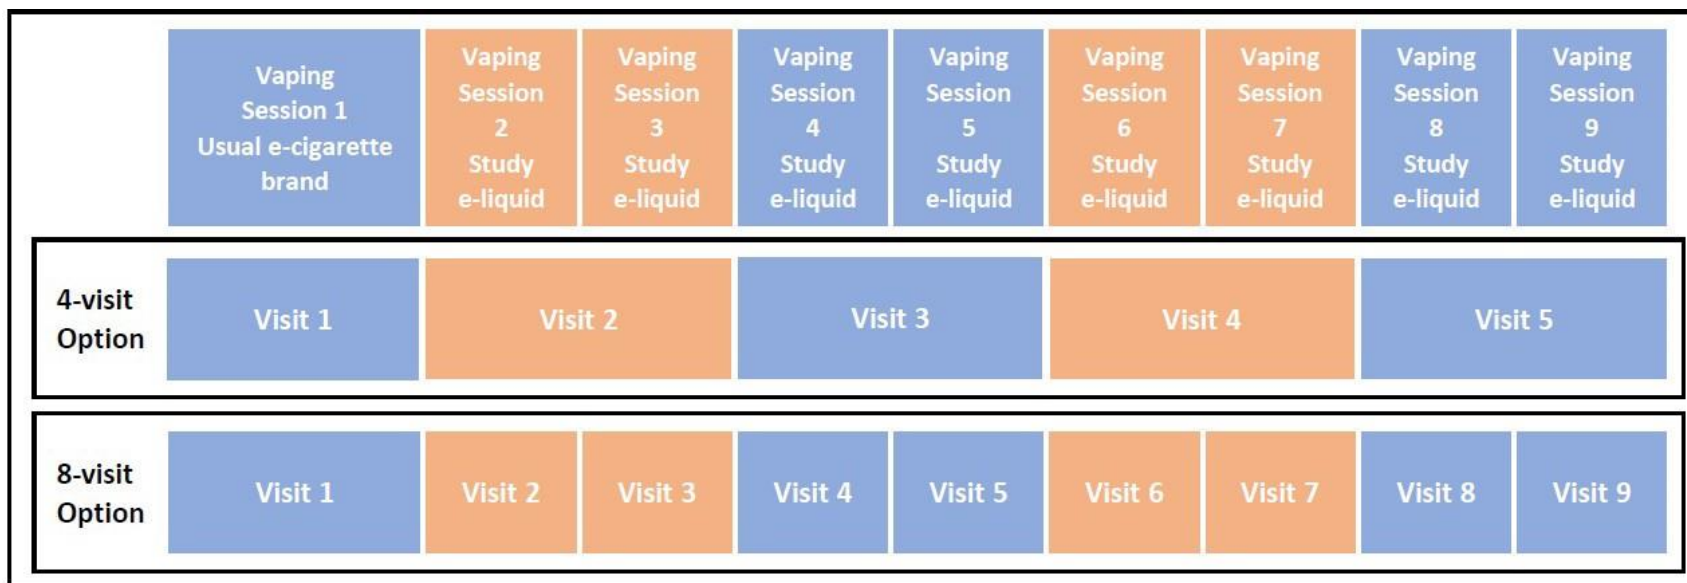

^a72 participants completed the second visit and used at least one study e-liquid, comprising the analytic sample. 15 participants completed only a baseline visit and did not try any study e-liquids. ^bEthnicity was self-reported as 'Hispanic or Latino' or 'Not Hispanic or Latino'. Race was self-reported as 'American Indian/Alaskan Native,' 'Asian,' 'Black or African American,' 'Native Hawaiian or Other Pacific Islander,' 'White or Caucasian,' and 'Other,' with multiple choices allowed. The 'Other' category includes non-Hispanic American Indian, Asian, and Pacific Islander. ^cThe regular use of a product was defined as using it for at least once a week, for at least a month. ^dCharacteristics of e-liquids brought to visit 1. The research staff determined the nicotine form by examining pictures of the participants' usual e-cigarette brands. Brands using cartridges or pods filled with nicotine salts, such as JUUL, Hyde, Elf bar and Breeze Pro, were categorized as nicotine salts, whereas devices designed for user-supplied e-liquid, such as Vaporesso and Caliburn, were categorized as unknown.

eFigure 1. Study device (Evolv Reflex)

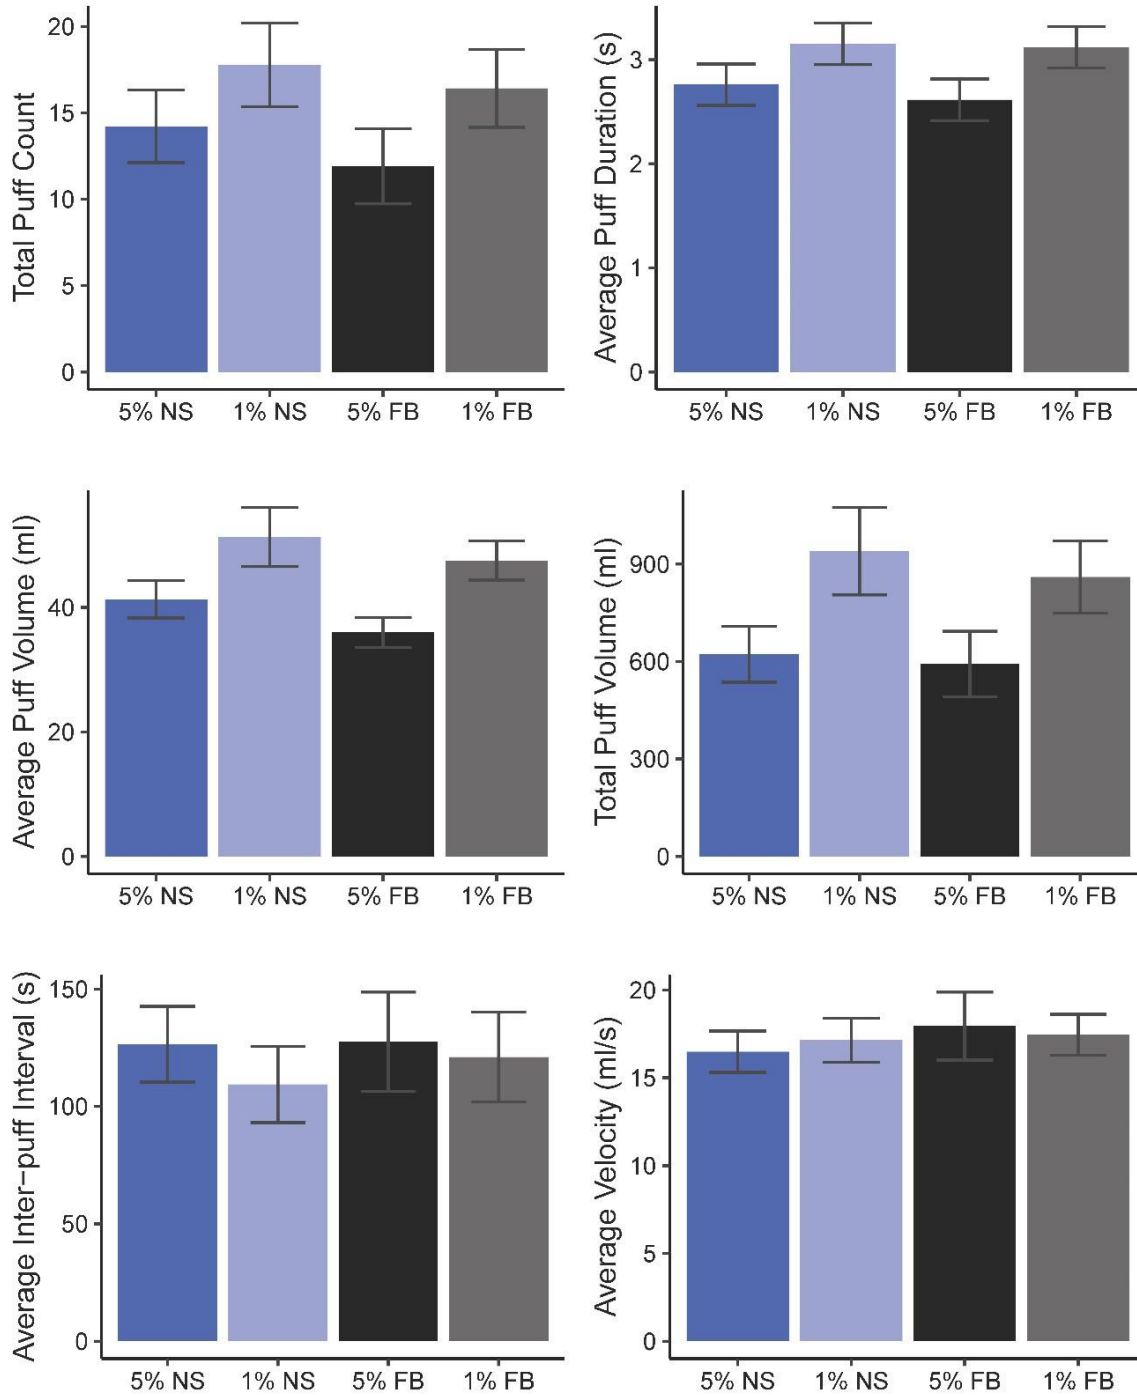

The Evolv Reflex was selected for its ability to vape lab-prepared e-liquids and its design similarity to currently available cartridge/pod type e-cigarette devices. The device has been fully characterized and includes puff actuation, 750 mAh battery, 3-25 watt range, 0.5 ohm coil resistance, and 2 mL pod capacity. Emissions testing demonstrated that its nicotine yield under normal use conditions was comparable to typical cigarette yields.

eFigure 2. Study sequence

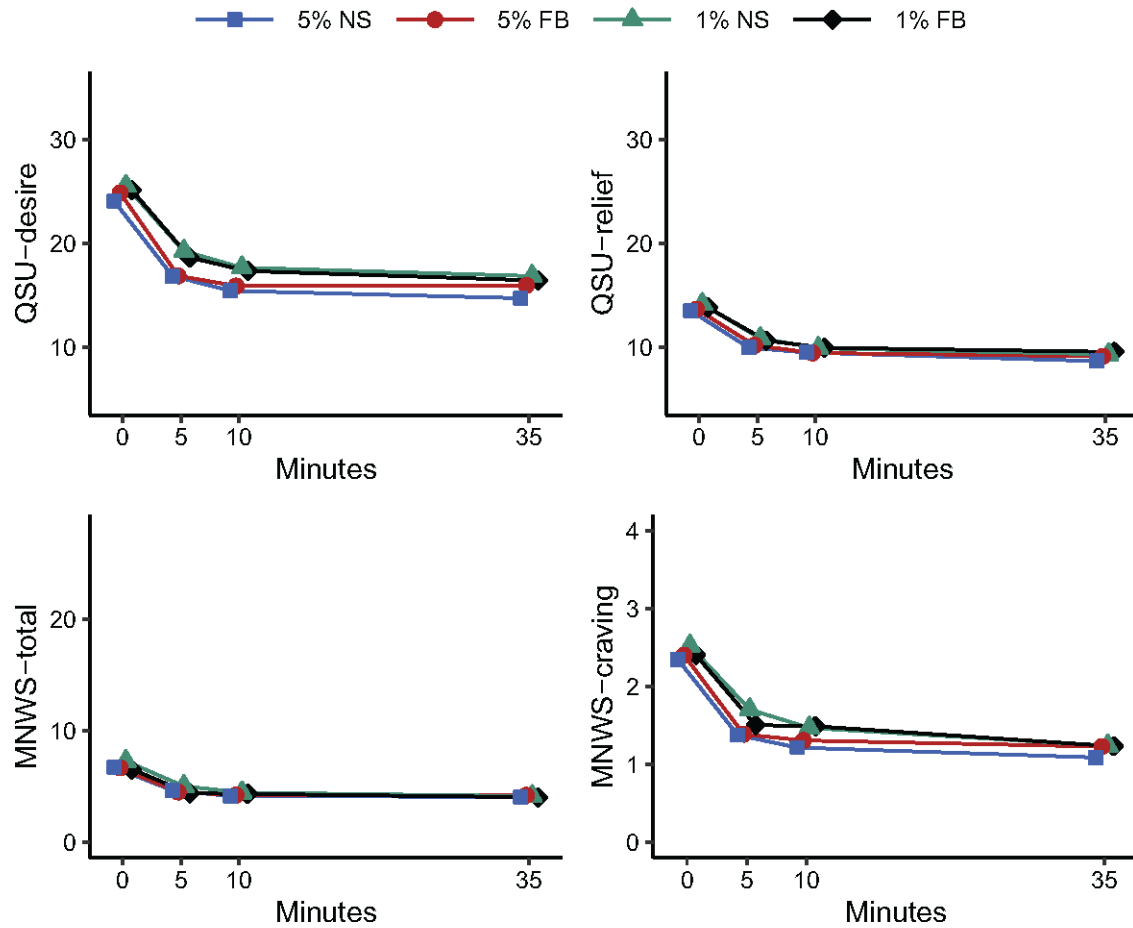

Note: Participants were required to abstain from nicotine for at least 12 hours before each study visit, with visits separated by a minimum of 48 hours. During the first visit, participants used their usual brand of e-cigarettes. Participants were then given two options for completing the subsequent eight vaping sessions: either in four or eight lab visits based on their preference. For these sessions, the Evolv Reflex e-cigarette device was used, which was set to a constant constant wattage of 8W, and prefilled with one of the eight study e-liquids. The e-liquids varied in nicotine form (freebase vs. salt-based nicotine), nicotine concentration (1% vs. 5% w/w), and flavor (menthol vs. tobacco) and were administered in a randomly assigned order.

eFigure 3. Topography during the 30-minute ad libitum vaping session by nicotine concentration and form.

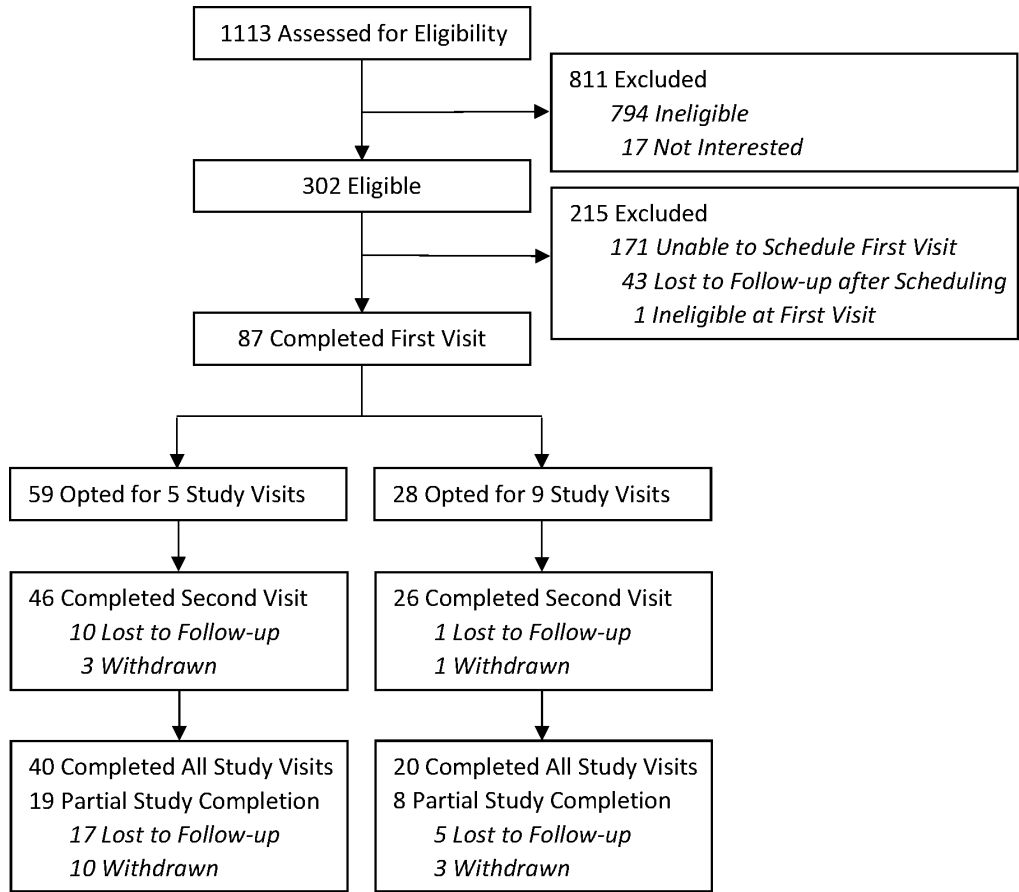

VAS: visual analog scale; NS: nicotine salts; FB: freebase nicotine. The boxes represent the means, and the lines represent the 95% confidence intervals. The unit measures were n for total puff count, seconds for average puff duration, and milliliters (ml) for the average puff volume and total puff volume.

eFigure 4. Urges and cravings for vaping

QSU: Questionnaire of Smoking Urges; MNWS: Minnesota Nicotine Withdrawal Scale. QSU-desire and QSU-relief ranged from 1 to 35. MNWS-total ranged from 0 to 32. MNWS-craving ranged from 0 to 4.
