Supplementary Table 2. Propensity score matching for age was used to create matched cohorts in the different groups of VD with an absolute standardized differences <10%

	Overall population	Isolated TR	TR + severe MR	TR + severe AS	TR+ severe AR	Absolute standardized difference
Number of patients	1183	423 (36%)	599 (51%)	132 (11%)	29 (2%)	
Mean Age (years)		82	67	62	74	25%
Propensity age exact						
Number of patients	975	356 (37%)	466 (48%)	131 (13%)	22 (2%)	
Mean Age (years)		81	73	76	78	9%
