

Supplementary Table 5. Univariate and multivariable hazard ratio of severe TR for the outcomes.

		All-cause death		HF hospitalization + valvular intervention	
		HR (95% CI)	p-value	HR (95% CI)	p-value
Univariate	Severe TR	1.18 (0.82-1.71)	0.364	2.36 (1.27-3.52)	0.008
Multivariate analysis	Severe TR	NA		1.12 (0.78-1.58)	0.447

Multivariate analysis– Adjusted for Age, NYHA class, Charlson index, LVEF, PASP
