nature portfolio

Corresponding author(s): Johannes H. Hegemann

Last updated by author(s): Aug 6, 2024

Reporting Summary

Nature Portfolio wishes to improve the reproducibility of the work that we publish. This form provides structure for consistency and transparency in reporting. For further information on Nature Portfolio policies, see our Editorial Policies and the Editorial Policy Checklist.

Statistics

For all statistical analyses, confirm that the following items are present in the figure legend, table legend, main text, or Methods section.

n/a	Confirmed	
☐	☒	The exact sample size (*n*) for each experimental group/condition, given as a discrete number and unit of measurement
☐	☒	A statement on whether measurements were taken from distinct samples or whether the same sample was measured repeatedly
☐	☒	The statistical test(s) used AND whether they are one- or two-sided *Only common tests should be described solely by name; describe more complex techniques in the Methods section.*
☒	☐	A description of all covariates tested
☒	☐	A description of any assumptions or corrections, such as tests of normality and adjustment for multiple comparisons
☐	☒	A full description of the statistical parameters including central tendency (e.g. means) or other basic estimates (e.g. regression coefficient) AND variation (e.g. standard deviation) or associated estimates of uncertainty (e.g. confidence intervals)
☐	☒	For null hypothesis testing, the test statistic (e.g. *F*, *t*, *r*) with confidence intervals, effect sizes, degrees of freedom and *P* value noted *Give P values as exact values whenever suitable.*
☒	☐	For Bayesian analysis, information on the choice of priors and Markov chain Monte Carlo settings
☒	☐	For hierarchical and complex designs, identification of the appropriate level for tests and full reporting of outcomes
☒	☐	Estimates of effect sizes (e.g. Cohen's *d*, Pearson's *r*), indicating how they were calculated

Our web collection on statistics for biologists contains articles on many of the points above.

Software and code

Policy information about availability of computer code

Data collection	Data were collected as described in Materials and Methods.
Data analysis	NIS Element Software and Fiji 1.54f software was used to quantify fulorescence signal of microscopic picture, using a custome code which is available on GitHub (https://github.com/SHaensch/2023_GUVQuant). CCP4 Suite (Aimless), XDS package, COOT and Phenix v. 1.19.2 were used for structure determination via crystallization. ATSAS Software package (version 3.0.5) was used for analysis of SAXS measurements. GeneAnalyzer 23.1.1 was used to quantify WesternBlots.

For manuscripts utilizing custom algorithms or software that are central to the research but not yet described in published literature, software must be made available to editors and reviewers. We strongly encourage code deposition in a community repository (e.g. GitHub). See the Nature Portfolio guidelines for submitting code & software for further information.

Data

Policy information about availability of data

All manuscripts must include a data availability statement. This statement should provide the following information, where applicable:

- Accession codes, unique identifiers, or web links for publicly available datasets
- A description of any restrictions on data availability
- For clinical datasets or third party data, please ensure that the statement adheres to our policy

We uploaded the SAXS data to the Small-Angle X-ray Scattering Biological Data Bank (SASBDB)[70], with the following accession codes:
SASDTQ5 [https://www.sasbdb.org/data/SASDTQ5] (SemDΔAPH),
SASDTR5 [https://www.sasbdb.org/data/SASDTR5] (BR-GBD),
SASDTS5 [https://www.sasbdb.org/data/SASDTS5] (SNX9-SH3),
SASDTT5 [https://www.sasbdb.org/data/SASDTT5] (SemDΔAPH + SNX9-SH3) and SASDTU5 [https://www.sasbdb.org/data/SASDTU5] (SemDΔAPH + BR-GBD). The crystal structures were deposited in the Protein Data Bank (PDB) with the accession codes 8S5R [https://doi.org/10.2210/pdb8s5r/pdb] (SemDΔAPH) and 8S5T [https://doi.org/10.2210/pdb8s5t/pdb] (SemDΔAPH+ BR-GBD). Further, the cited structures in this paper can be found with the following accession codes:
1QWE [https://doi.org/10.2210/pdb1qwe/pdb] (C-SRC SH3 + APP12)
2JMA [https://doi.org/10.2210/pdb2jma/pdb] (R21A Spc-SH3:P41 complex)
2DRK [https://doi.org/10.2210/pdb8s5r/pdb] (SH3 + Acan125)
2KXC [https://doi.org/10.2210/pdb8s5r/pdb] (IRTKS-SH3 + ExpFu-R47)
1CEE [https://doi.org/10.2210/pdb8s5r/pdb] (Cdc42 + WASP)
The authors declare that the data supporting the findings of this study are available within the paper and its extended data files. Data underlying Figs. 3d, 4a, b, e, f, 5c, 6a, Supp. Figs. 2a, 4a, b, c, d, 5a are provided as Source Data files. All other data are available from the corresponding author upon reasonable request.

Research involving human participants, their data, or biological material

Policy information about studies with human participants or human data. See also policy information about [sex, gender (identity/presentation), and sexual orientation](sex, gender) and race, ethnicity and racism.

Reporting on sex and gender	*Use the terms sex (biological attribute) and gender (shaped by social and cultural circumstances) carefully in order to avoid confusing both terms. Indicate if findings apply to only one sex or gender; describe whether sex and gender were considered in study design; whether sex and/or gender was determined based on self-reporting or assigned and methods used.* *Provide in the source data disaggregated sex and gender data, where this information has been collected, and if consent has been obtained for sharing of individual-level data; provide overall numbers in this Reporting Summary. Please state if this information has not been collected.* *Report sex- and gender-based analyses where performed, justify reasons for lack of sex- and gender-based analysis.*
Reporting on race, ethnicity, or other socially relevant groupings	*Please specify the socially constructed or socially relevant categorization variable(s) used in your manuscript and explain why they were used. Please note that such variables should not be used as proxies for other socially constructed/relevant variables (for example, race or ethnicity should not be used as a proxy for socioeconomic status).* *Provide clear definitions of the relevant terms used, how they were provided (by the participants/respondents, the researchers, or third parties), and the method(s) used to classify people into the different categories (e.g. self-report, census or administrative data, social media data, etc.)* *Please provide details about how you controlled for confounding variables in your analyses.*
Population characteristics	*Describe the covariate-relevant population characteristics of the human research participants (e.g. age, genotypic information, past and current diagnosis and treatment categories). If you filled out the behavioural & social sciences study design questions and have nothing to add here, write "See above."*
Recruitment	*Describe how participants were recruited. Outline any potential self-selection bias or other biases that may be present and how these are likely to impact results.*
Ethics oversight	*Identify the organization(s) that approved the study protocol.*

Note that full information on the approval of the study protocol must also be provided in the manuscript.

Field-specific reporting

Please select the one below that is the best fit for your research. If you are not sure, read the appropriate sections before making your selection.

[x] Life sciences   [ ] Behavioural & social sciences   [ ] Ecological, evolutionary & environmental sciences

For a reference copy of the document with all sections, see nature.com/documents/nr-reporting-summary-flat.pdf

Life sciences study design

All studies must disclose on these points even when the disclosure is negative.

Sample size	Present in the relevant figure legends and methods section.
Data exclusions	No data were excluded from the analysis.
Replication	All atempts of replication were successful and are included in the manuscript.
Randomization	This is not relevant to this study.
Blinding	Blinding is not applicable to this study. In order to assure the functionality of each assay, a positive and negative control in every sample size had to be used.

Reporting for specific materials, systems and methods

We require information from authors about some types of materials, experimental systems and methods used in many studies. Here, indicate whether each material, system or method listed is relevant to your study. If you are not sure if a list item applies to your research, read the appropriate section before selecting a response.

Materials & experimental systems

n/a	Involved in the study
☐	☒ Antibodies
☒	☐ Eukaryotic cell lines
☒	☐ Palaeontology and archaeology
☒	☐ Animals and other organisms
☒	☐ Clinical data
☒	☐ Dual use research of concern
☒	☐ Plants

Methods

n/a	Involved in the study
☒	☐ ChIP-seq
☒	☐ Flow cytometry
☒	☐ MRI-based neuroimaging

Antibodies

Antibodies used	anti-penta-His from Quiagen (#34660), dilution: 1:2500 Anti-Cdc42 from BD Transduction Laboratories (#610929), dilution: 1:1000 Anti-GST from SantaCruz (sc-374171), dilution: 1:500 anti-mouse coupled to alkaline phosphatase from Sigma-Aldrich (#A3562), dilution: 1:30000
Validation	The applications of all antibodies used in this study were validated by the manufacturers (Statements are available on the according websites).

Plants

Seed stocks	*Report on the source of all seed stocks or other plant material used. If applicable, state the seed stock centre and catalogue number. If plant specimens were collected from the field, describe the collection location, date and sampling procedures.*
Novel plant genotypes	*Describe the methods by which all novel plant genotypes were produced. This includes those generated by transgenic approaches, gene editing, chemical/radiation-based mutagenesis and hybridization. For transgenic lines, describe the transformation method, the number of independent lines analyzed and the generation upon which experiments were performed. For gene-edited lines, describe the editor used, the endogenous sequence targeted for editing, the targeting guide RNA sequence (if applicable) and how the editor was applied.*
Authentication	*Describe any authentication procedures for each seed stock used or novel genotype generated. Describe any experiments used to assess the effect of a mutation and, where applicable, how potential secondary effects (e.g. second site T-DNA insertions, mosiacism, off-target gene editing) were examined.*
