

A**B****C****D****E****Figure S1. DOX caused cardiomyocytes ferroptosis and reduced the expression of CREG1**

A. The effect of DOX (0, 2, 5 and 10 μ M) on the viability of HL-1 cardiomyocytes was examined using by CCK8 assay.

B. The effect of different cell death inhibitor on the cell viability of HL-1 cells induced by DOX (5 μ M).

C. The mRNA of *Creg1* and *Ptgs2* in the NMCMs with DOX treatment.

D-E. Western blotting of CREG1 and ferroptosis-related proteins in the NMCMs with DOX treatment. n = 3 for each group. Z-VAD-FMK: apoptosis inhibitor, 40 μ M; CQ: chloroquine, autophagy inhibitor, 10 μ M; Fer-1: ferrostatin-1, ferroptosis inhibitor, 10 μ M; Nec-1: Necrostatin-1, necroptosis inhibitor, 30 μ M. DOX: doxorubicin, NMCMs: neonatal mouse cardiomyocytes. *p<0.05, **p<0.01 vs. control; ##p<0.01 vs. DOX group; &&p < 0.01 vs. Fer-1+DOX group.

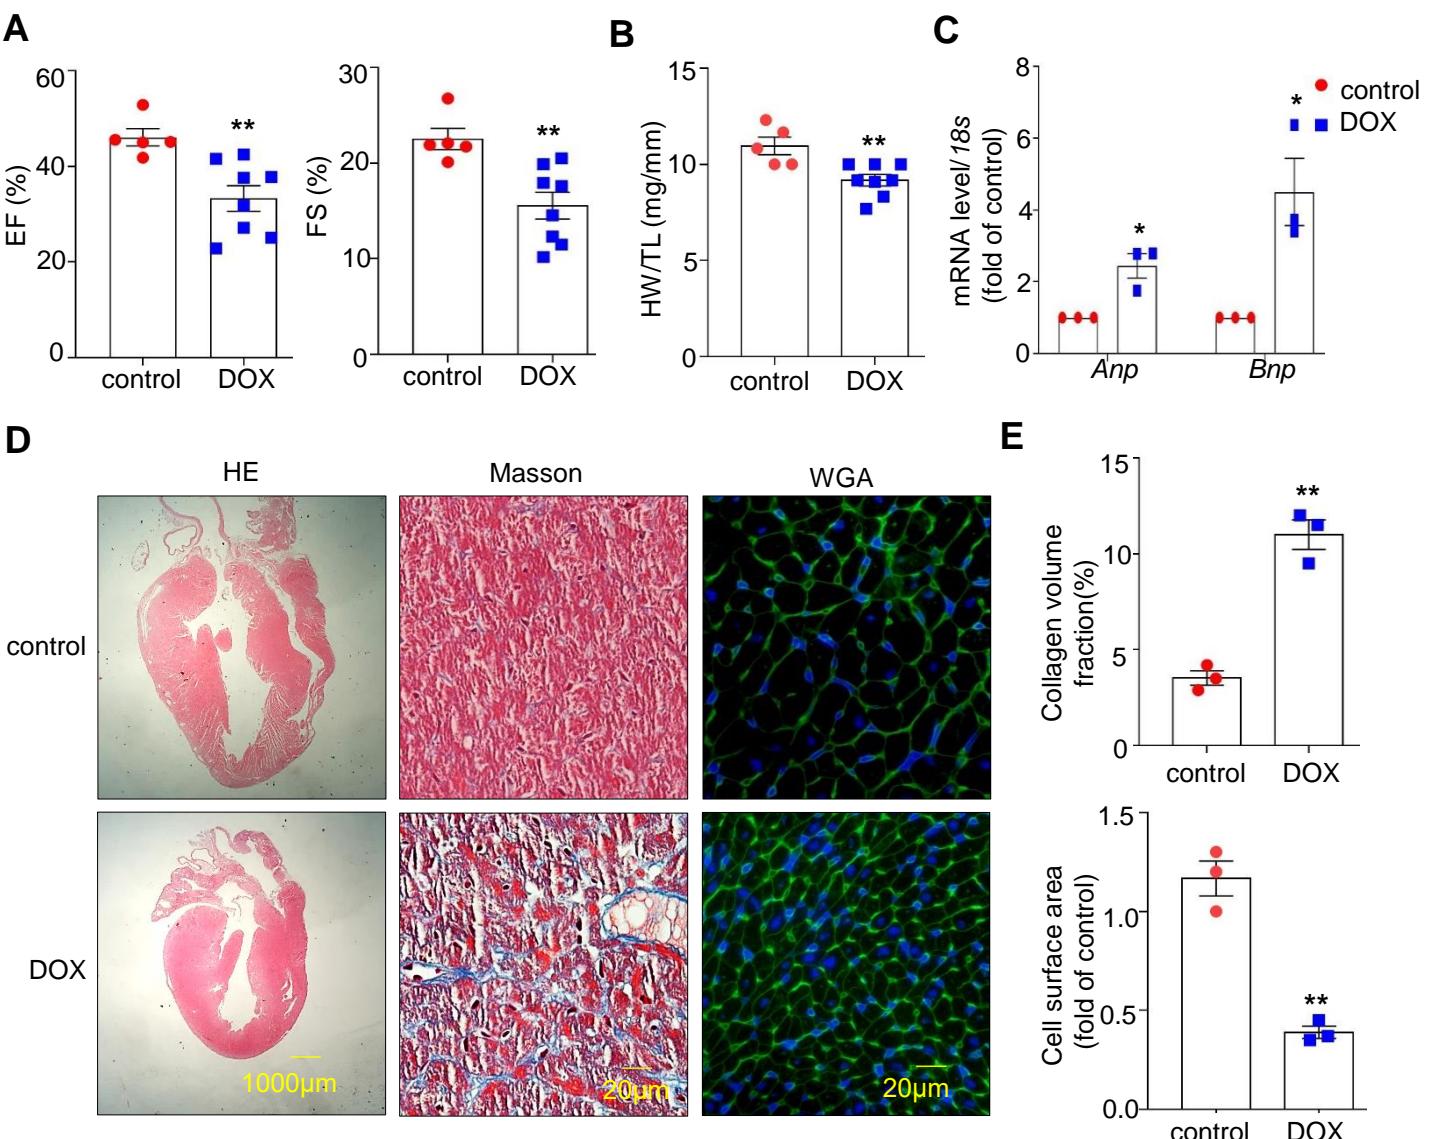

Figure S2. The establishment of DOX-induced cardiotoxicity

A. EF% and FS% in the control and DOX group of C57BL/6J mice ($n = 5$ for control group, $n = 8$ for DOX group). **B.** The ratio of heart weight (HW) to tibial length (TL) in the control and DOX group of C57BL/6J mice ($n = 5$ for control group, $n = 8$ for DOX group). **C.** The mRNA of *Anp* and *Bnp* in the myocardium after DOX treatment ($n = 3$). **D-E.** HE staining, Masson's trichrome staining, and WGA staining in the control and DOX group of C57BL/6J mice ($n = 3$). DOX: doxorubicin, $*p < 0.05$, $**p < 0.01$ vs. control.

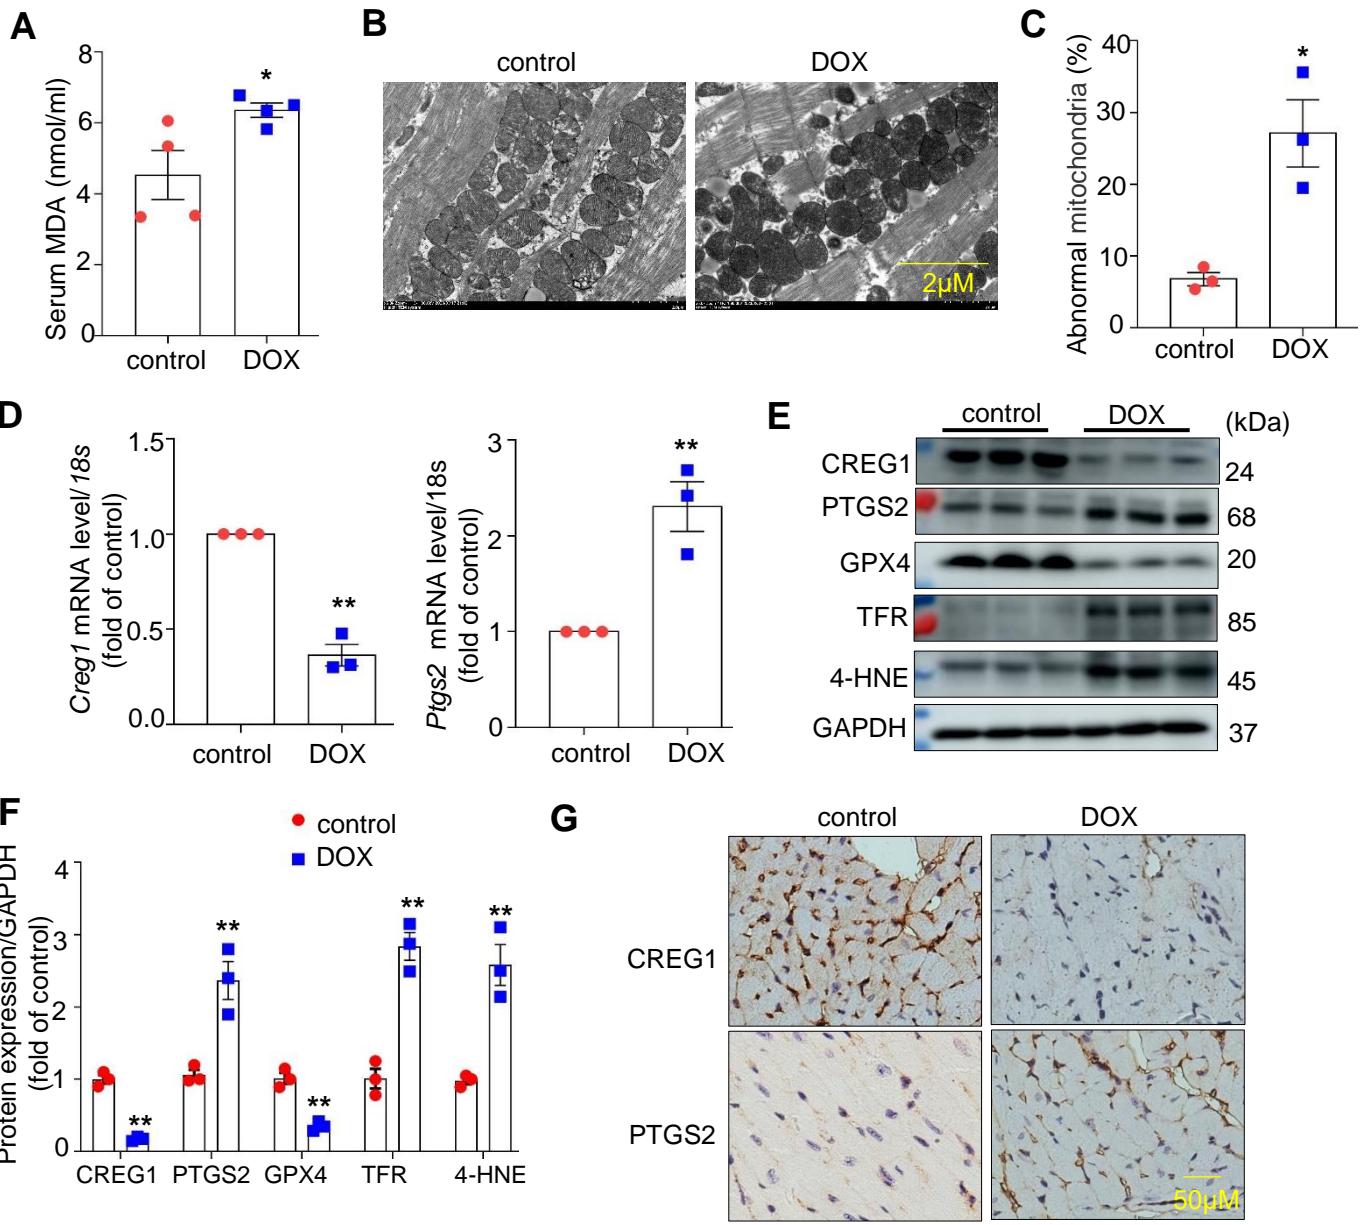

Figure S3. CREG1 expression was reduced in the myocardium after DOX treatment

A. Serum MDA content in DOX-treated C57BL/6J mice. **B-C.** Transmission electron microscope for mitochondria in the myocardium of DOX-treated C57BL/6J mice. **D.** The mRNA of *Creg1* and *Ptgs2* in the myocardium of DOX-treated C57BL/6J mice. **E-F.** Western blotting of CREG1 and ferroptosis-related proteins in the myocardium of DOX-treated C57BL/6J mice. **G.** Immunohistochemical staining of CREG1 and PTGS2 in the myocardium of DOX-treated C57BL/6J mice. n = 3 for each group. DOX: doxorubicin, MDA: Malondialdehyde. *p<0.05, **p<0.01 vs. control.

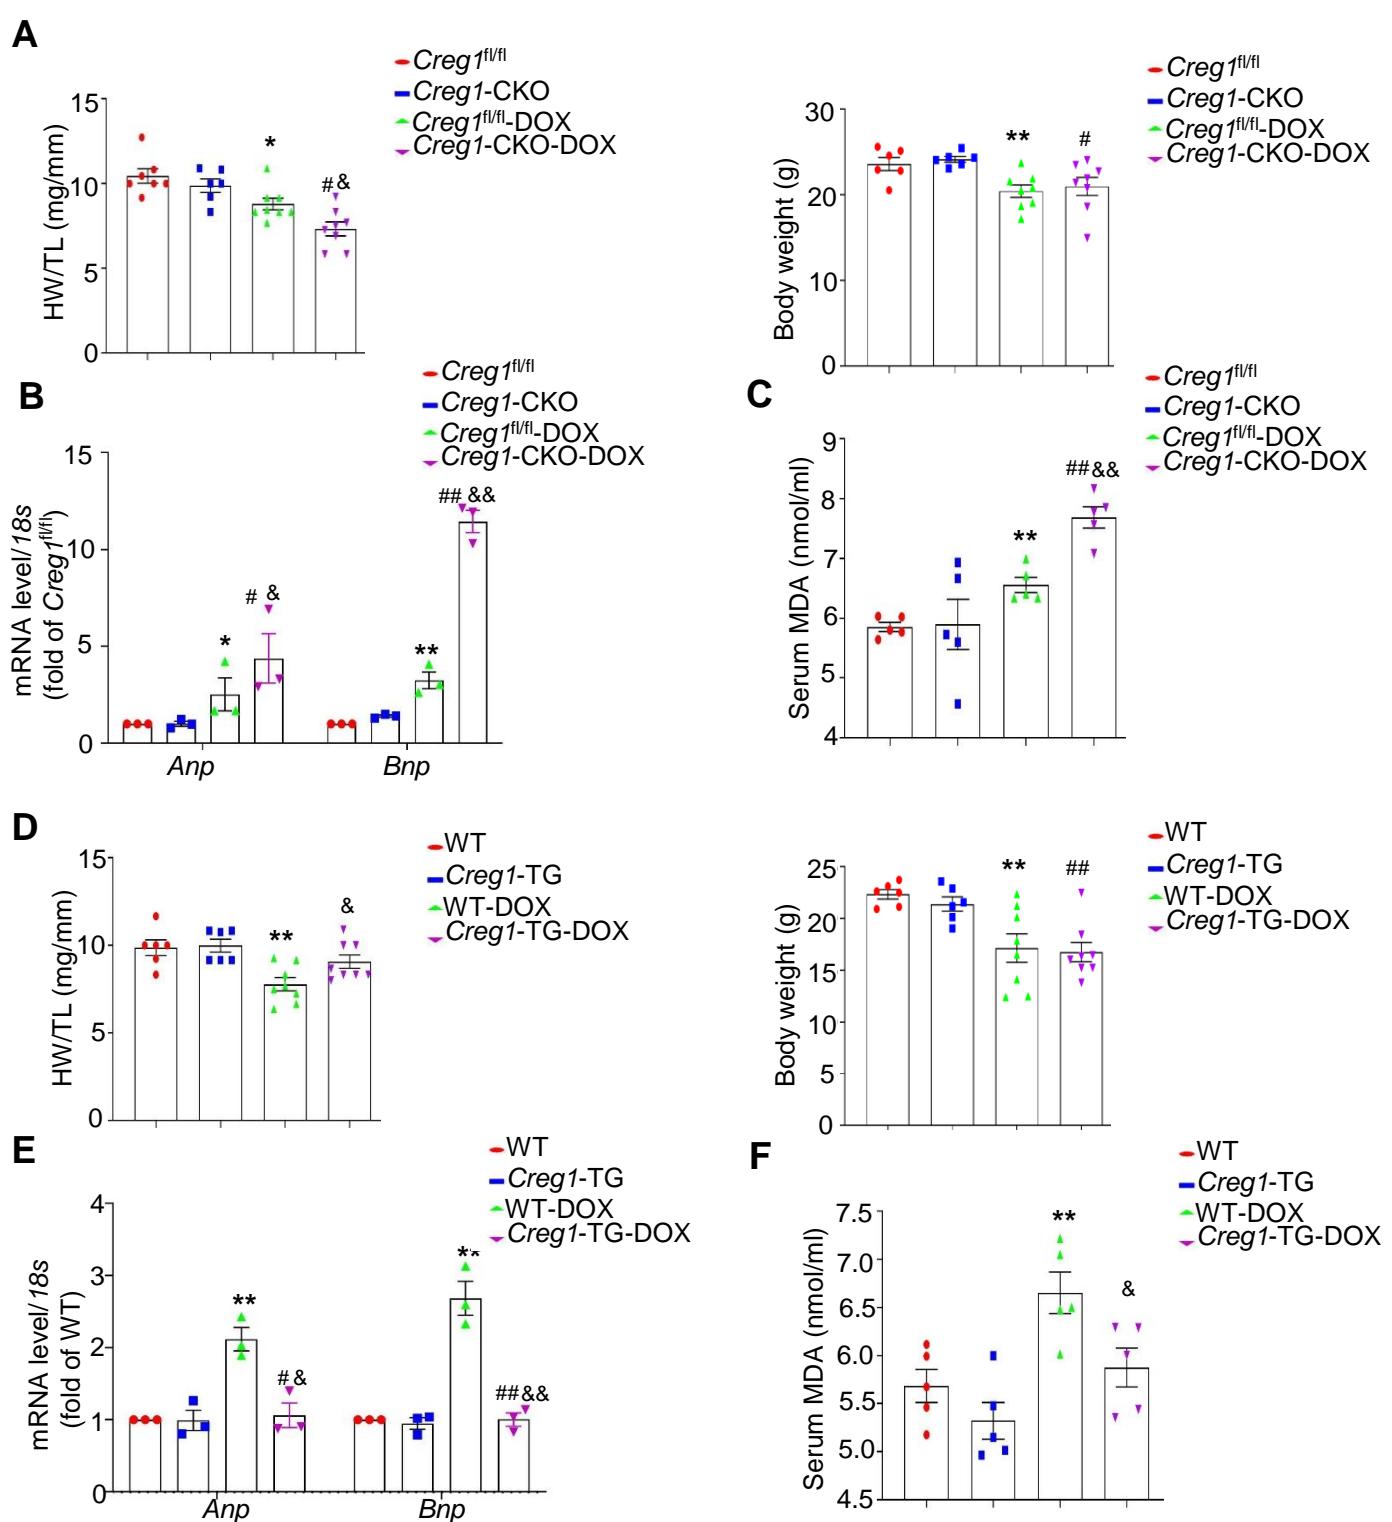

Figure S4. CREG1 deficiency aggravated DOX-induced cardiotoxicity and CREG1 overexpression alleviated DOX-induced cardiotoxicity

A. The ratio of heart weight (HW) to tibial length (TL) and body weight in the *Creg1*-CKO mice after DOX treatment ($n = 6$ for the control group, $n = 8$ for the DOX group). **B.** The mRNA of *Anp* and *Bnp* in the myocardium of *Creg1*-CKO mice after DOX treatment ($n = 3$). **C.** Serum MDA content in *Creg1*-CKO mice after DOX treatment ($n = 5$). **D.** The ratio of HW to TL and body weight in the *Creg1*-TG mice after DOX treatment ($n = 6$ for the control group, $n = 8$ for the DOX group). **E.** The mRNA of *Anp* and *Bnp* in the myocardium of *Creg1*-TG mice after DOX treatment ($n = 3$). **F.** Serum MDA content in *Creg1*-TG mice after DOX treatment ($n = 5$). DOX: doxorubicin; *Creg1*-CKO: *Creg1* cardiac-specific knockout mice; *Creg1^{fl/fl}* mice: littermate control mice. *Creg1*-TG: *Creg1* transgenic mice; WT mice: wild type mice. * $p < 0.05$, ** $p < 0.01$ vs. *Creg1^{fl/fl}* mice or WT mice; # $p < 0.05$, ## $p < 0.01$ vs. *Creg1*-CKO or *Creg1*-TG; && $p < 0.01$ vs. *Creg1^{fl/fl}*-DOX or WT-DOX.

Figure S5. Ferroptosis inhibitor attenuated the effect of CREG1 knockdown on cardiomyocytes ferroptosis

A. The effect of CREG1 knockdown on the fluorescence intensity of MitoSOX-stained cells was examined using a full-wavelength enzyme-linked immunosorbent assay reader ($n = 7$). **B-C.** Western blotting of CREG1 and ferroptosis-related proteins in the CREG1-knockdown NMCMs after ferroptosis inhibitor Fer-1 treatment ($n = 3$). **D-E.** Effects of Fer-1 on mitochondrial oxidation in the CREG1-knockdown HL-1 cardiomyocytes using by MitoSOX staining ($n = 5$). DOX: doxorubicin, NMCMs: neonatal mouse cardiomyocytes. * $p < 0.05$, ** $p < 0.01$ vs. si-control group or si-control+DOX group; # $p < 0.05$, ## $p < 0.01$ vs. si-control+DOX group or si-Creg1+DOX group; & $p < 0.05$, && $p < 0.01$ vs. si-control+Fer-1+DOX group.

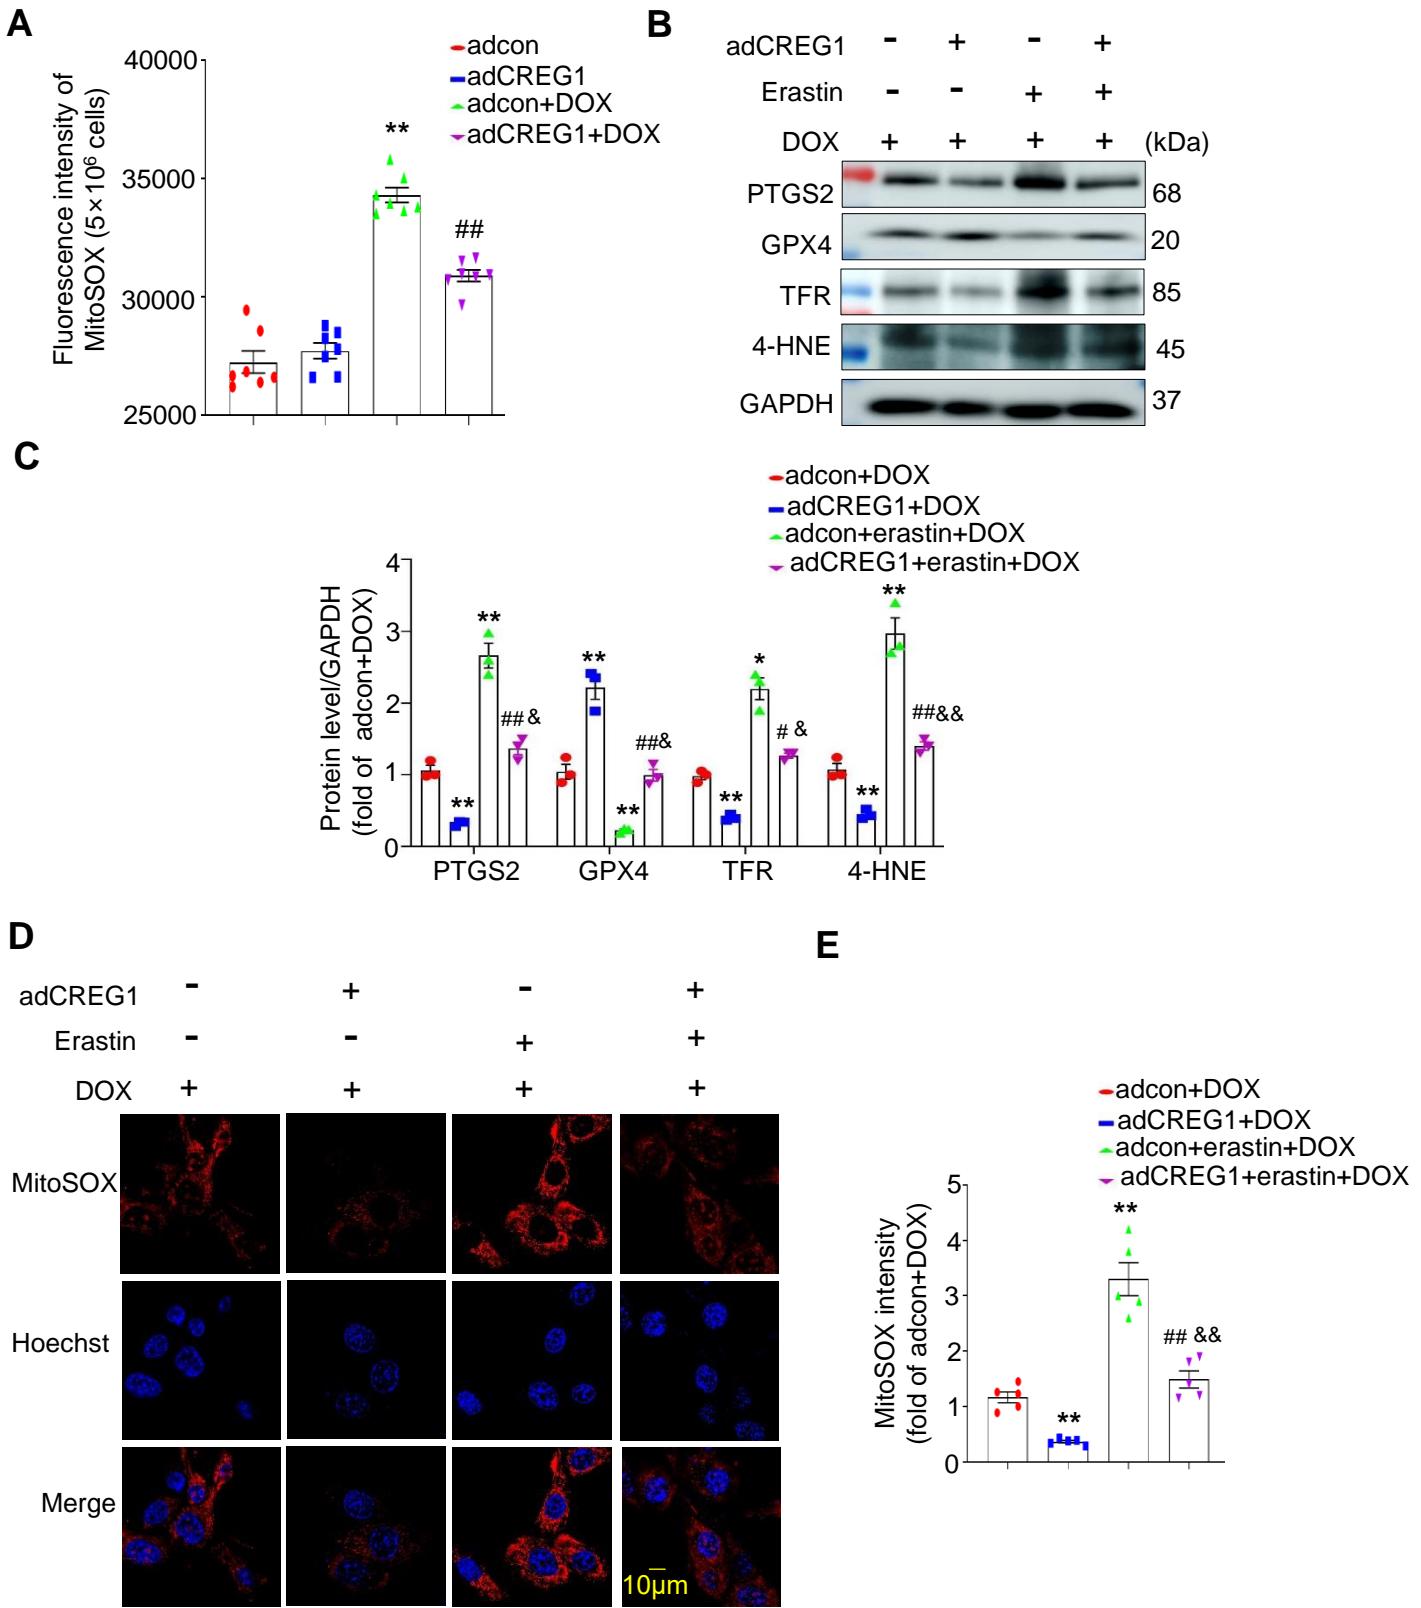

Figure S6. Ferroptosis inducer attenuated the effect of CREG1 overexpression on cardiomyocytes ferroptosis

A. The effect of CREG1 overexpression on the fluorescence intensity of MitoSOX-stained cells was examined using a full-wavelength enzyme-linked immunosorbent assay reader ($n = 7$). B-C. Western blotting of CREG1 and ferroptosis-related proteins in the CREG1-overexpressed NMCMs after ferroptosis inducer erastin treatment ($n = 3$). D-E. Effects of erastin on mitochondrial oxidation in the CREG1-overexpressed HL-1 cardiomyocytes using by MitoSOX staining ($n = 5$). DOX: doxorubicin, NMCMs: neonatal mouse cardiomyocytes. * $p < 0.05$, ** $p < 0.01$ vs. adcon group or adcon+DOX group; # $p < 0.05$, ## $p < 0.01$ vs. adcon+DOX group or adCREG1+DOX group; & $p < 0.05$, && $p < 0.01$ vs. adcon+erastin+DOX group.

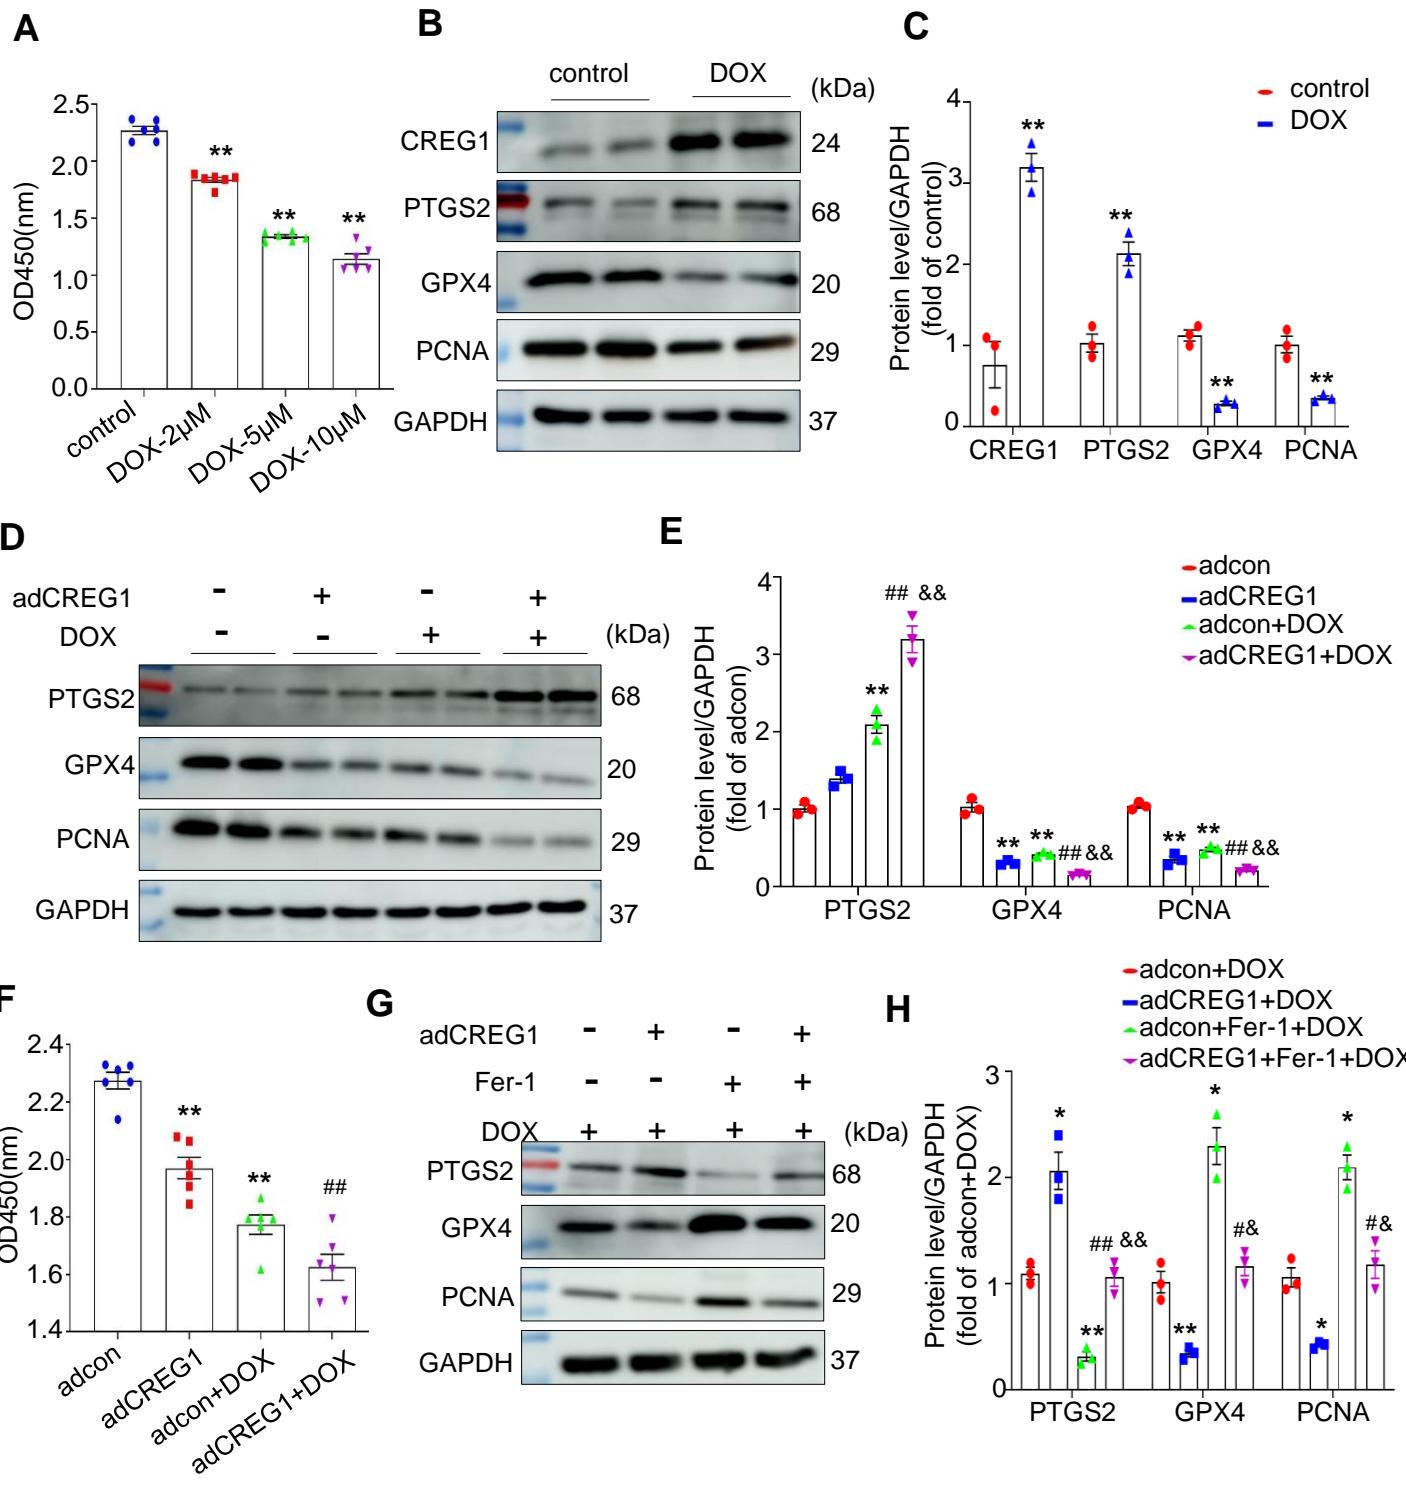

Figure S7. CREG1 inhibited the proliferation of breast cancer cell by regulating the ferroptosis

A. The effect of DOX (0, 2, 5 and 10 μ M) on the proliferation of MDA-MB-231 cells was examined using by CCK8 assay. B-C. The effect of DOX (5 μ M) on the expressions of CREG1, ferroptosis-related protein and PCNA in MDA-MB231 cells were examined by western blotting. D-E. Effects of CREG1 overexpression on ferroptosis and PCNA in MDA-MB-231 cells were examined by western blotting. F. The effect of CREG1 overexpression on the proliferation of MDA-MB-231 cells was examined using by CCK8 assay. G-H. Effects of Fer-1 on the ferroptosis and PCNA in MDA-MB-231 cells were examined by western blotting. n = 3. MDA-MB-231: breast cancer cell, DOX: doxorubicin. Fer-1: ferroptosis inhibitor. **p<0.01 vs. control or adcon group or adcon+DOX group; #p<0.05, ##p<0.01 vs. adCREG1 group or adCREG1+DOX group; *p<0.05, &p<0.01 vs. adcon+DOX group or adcon+Fer-1+DOX group.

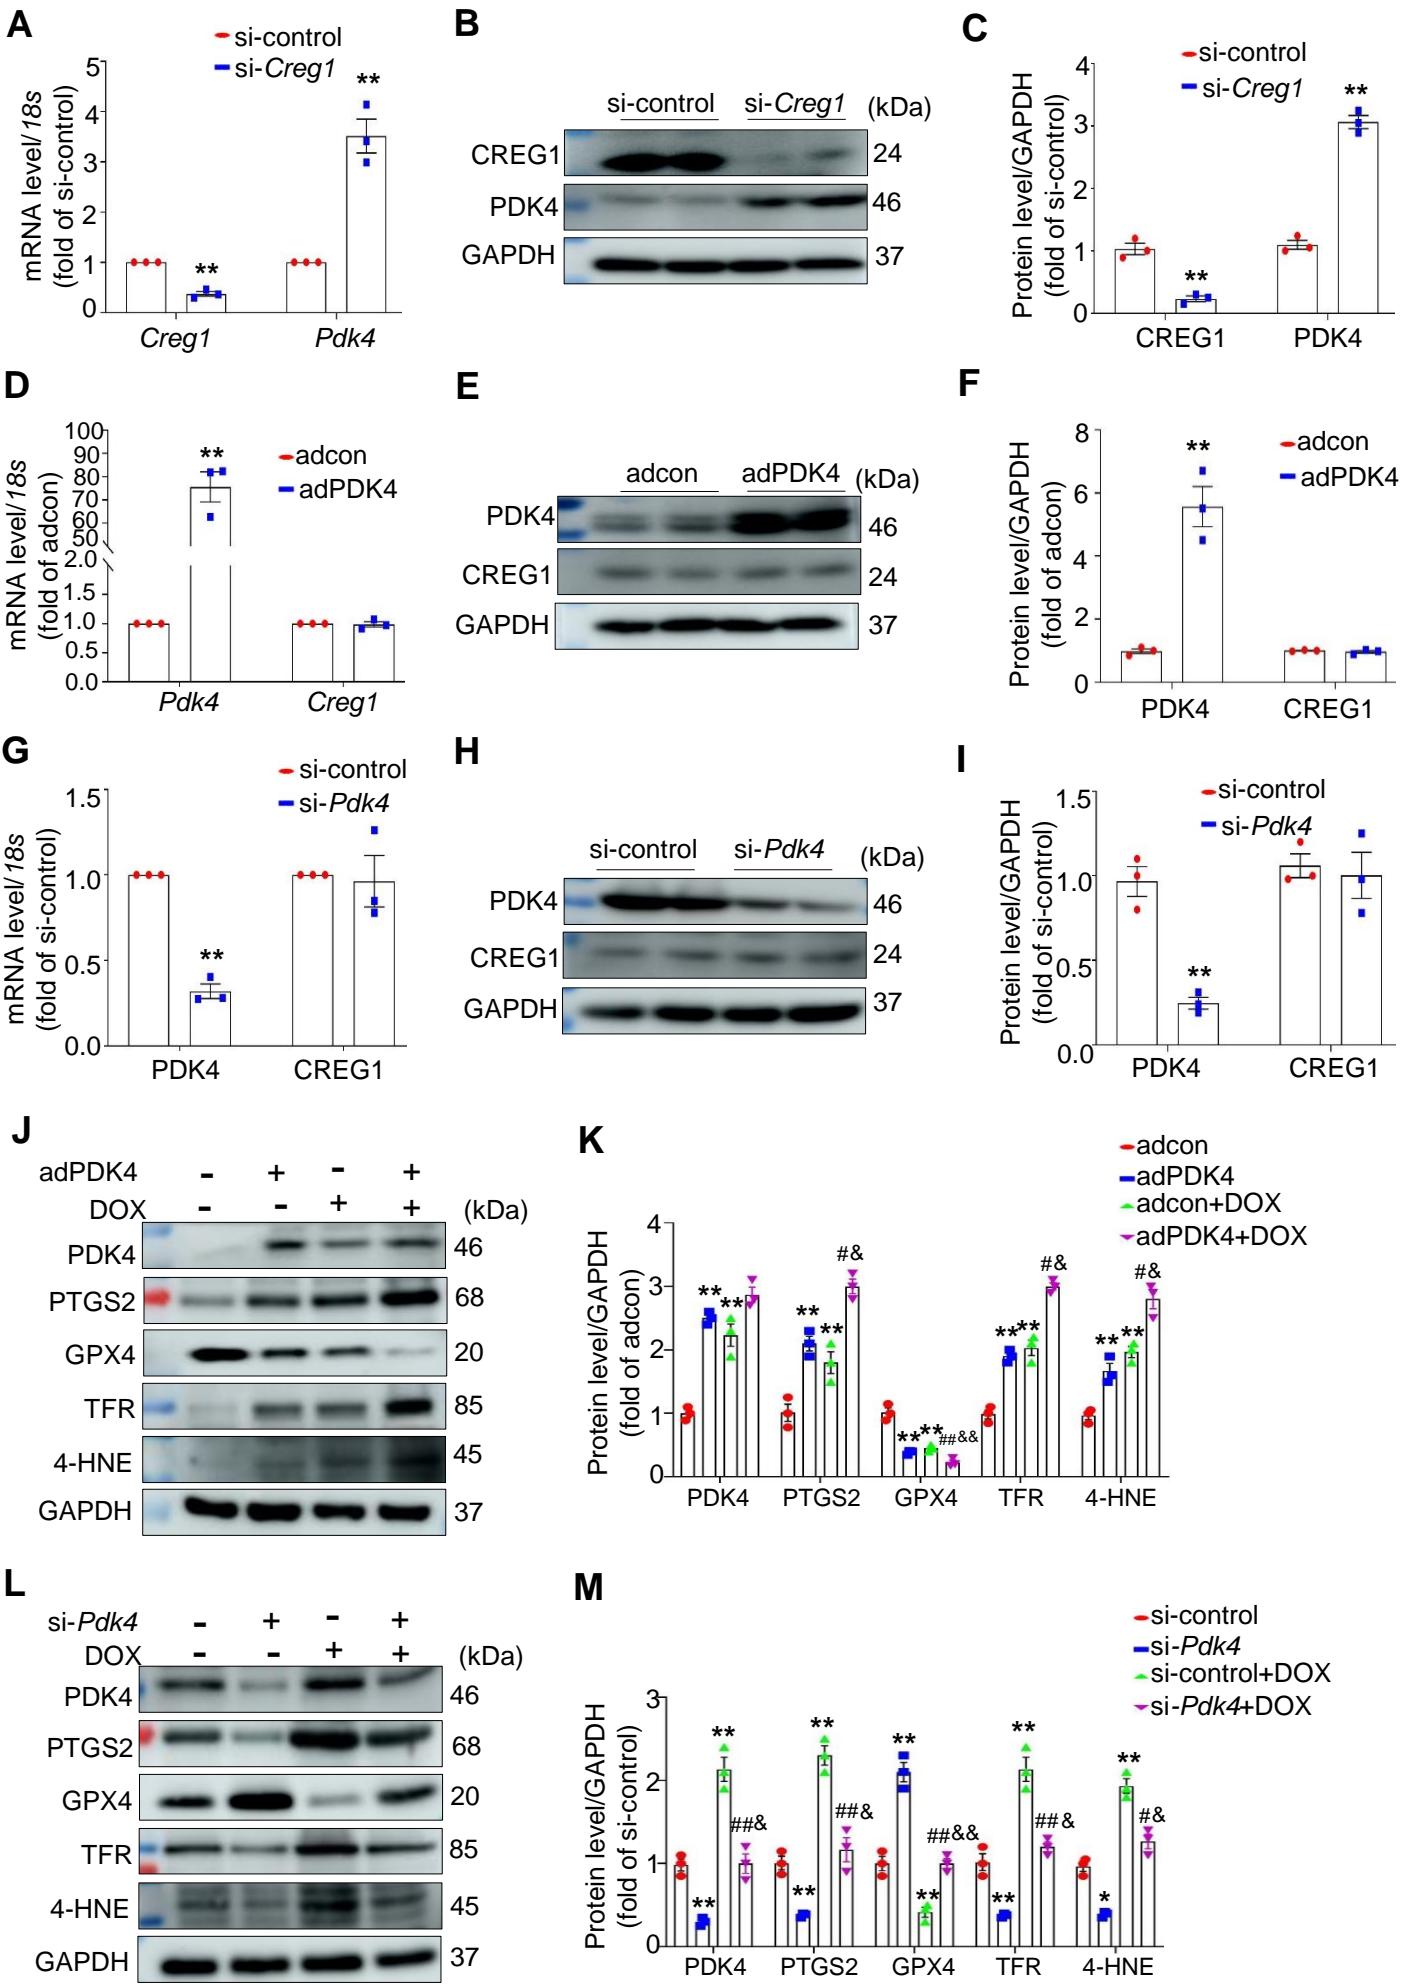

Figure S8. CREG1 knockdown increased the PDK4 expression in cardiomyocytes

A-C. Real-time PCR and western blotting analysis of PDK4 expression in CREG1-knockdown NMCMs. **D-F.** Real-time PCR and western blotting analysis of CREG1 expression in PDK4-overexpressed NMCMs. **G-I.** Real-time PCR analysis of CREG1 expression in PDK4-knockdown NMCMs. **J-K.** Effects of PDK4 overexpression on the expression of ferroptosis-related proteins in NMCMs, as determined by western blotting. **L-M.** Effects of PDK4 knockdown on the expression of ferroptosis-related proteins in NMCMs, as determined by western blotting. n = 3 for each group. DOX: doxorubicin, NMCMs: neonatal mouse cardiomyocytes. *p<0.05, **p<0.01 vs. adcon or si-control group; #p<0.05, ##p<0.01 vs. adPDK4 or si-Pdk4 group; ^p<0.05, &&p<0.01 vs. adcon+DOX or si-control+DOX group.

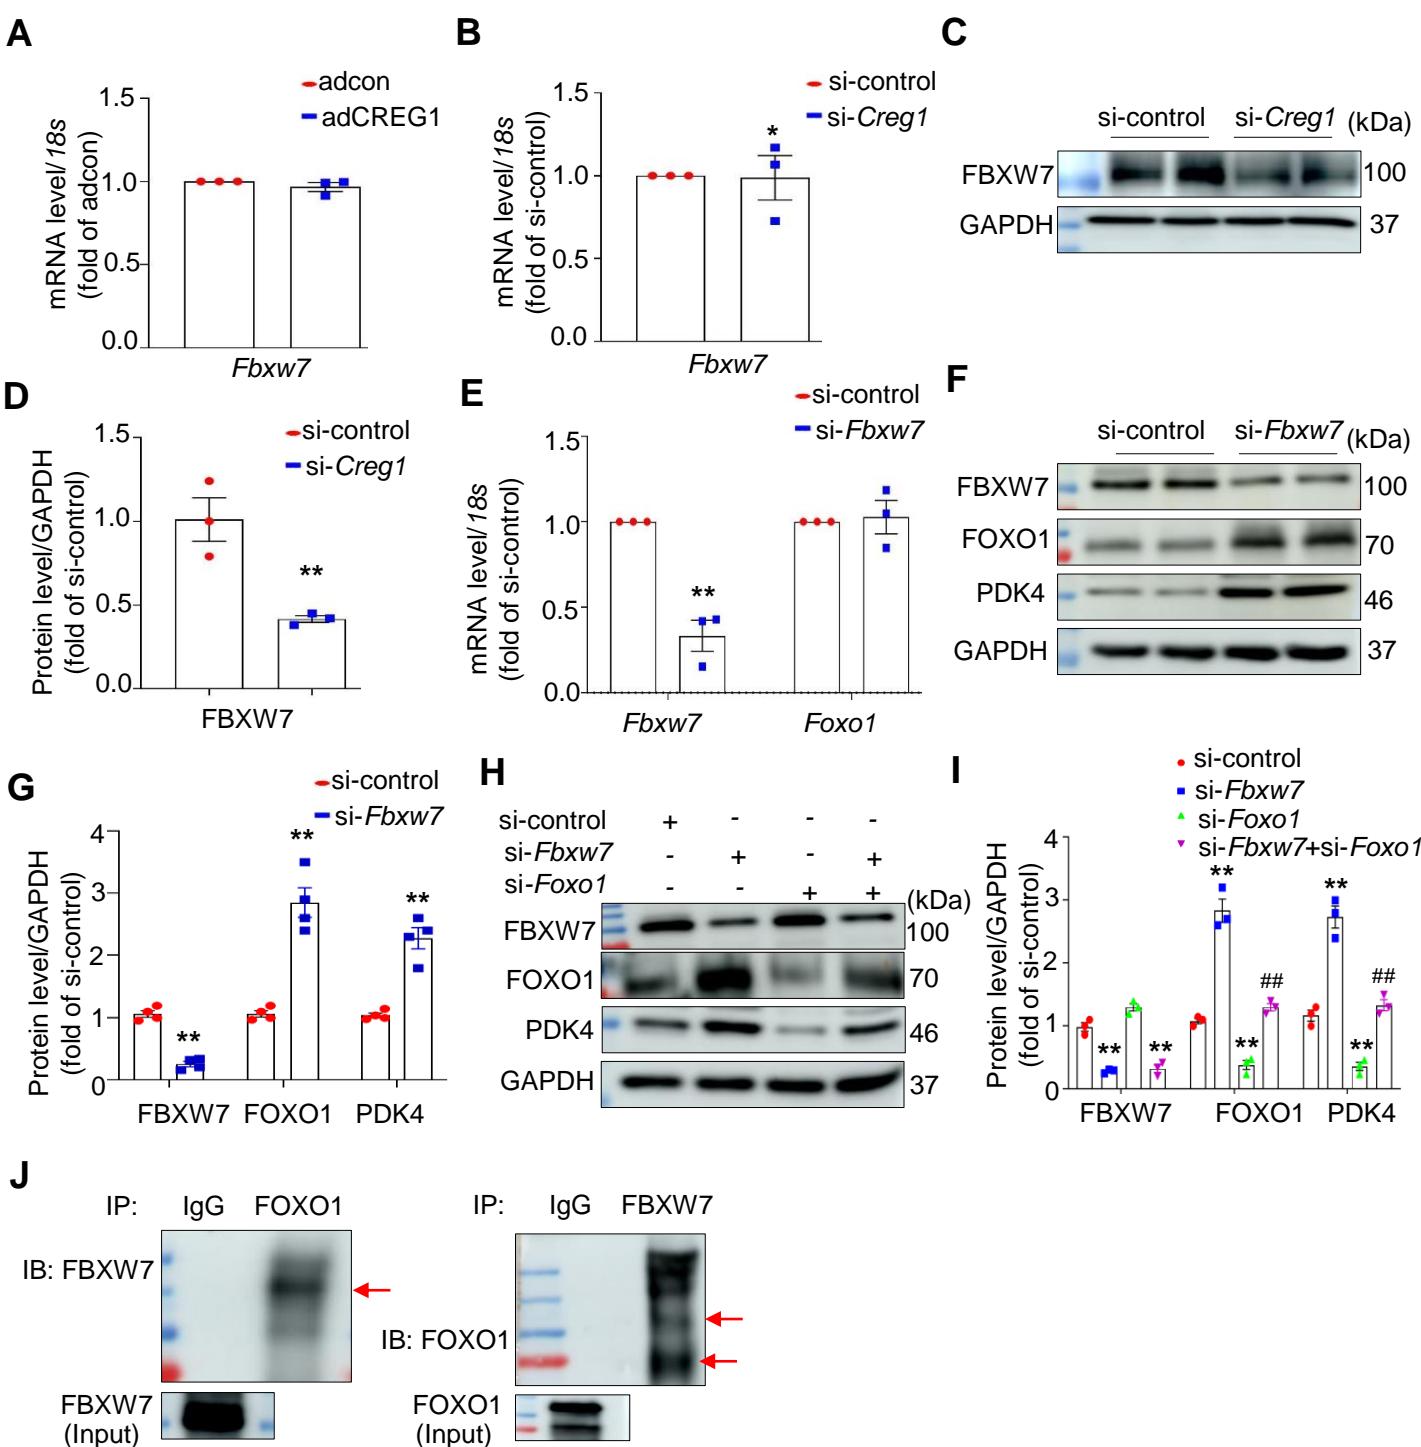

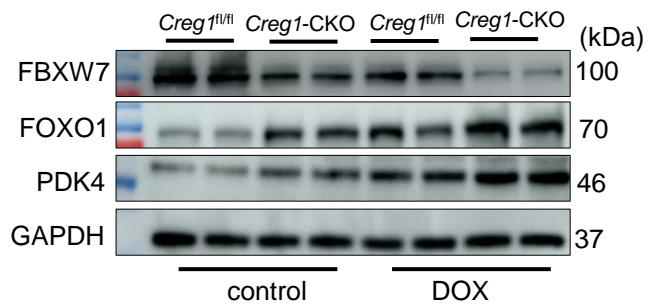

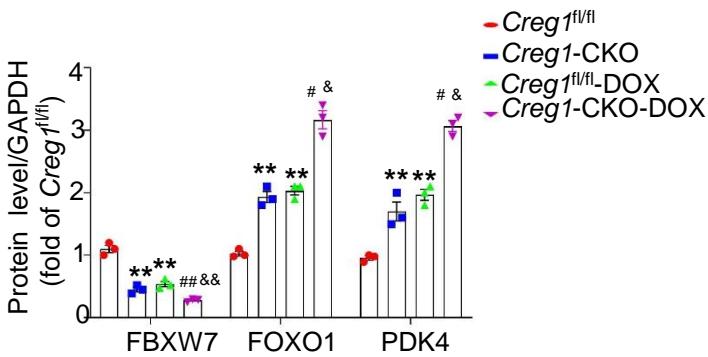

Figure S9. FBXW7 knockdown increased the protein expression of FOXO1 in cardiomyocytes

A. Real-time PCR analysis of *Fbxw7* mRNA expression in CREG1-overexpressed NMCMs ($n = 3$). B-D. Real-time PCR and western blotting analysis of FBXW7 expression in CREG1-knockdown NMCMs ($n = 3$). E. Real-time PCR of FOXO1 expression in FBXW7-knockdown NMCMs ($n = 3$). F-G. Western blotting of FOXO1 and PDK4 expression in FBXW7-knockdown NMCMs ($n = 4$). H-I. Western blotting of FOXO1 and PDK4 expression in FBXW7-knockdown together with FOXO1 knockdown NMCMs ($n = 3$). J. IP assays of the binding regions of FBXW7 and FOXO1 in HEK293T cells. NMCMs: neonatal mouse cardiomyocytes. * $p < 0.05$, ** $p < 0.01$ vs. si-control group; ## $p < 0.01$ vs. si-*Fbxw7*.

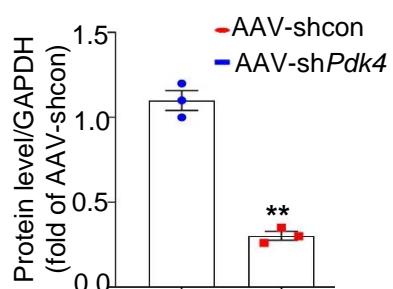

Figure S10. CREG1 overexpression inhibited PDK4 protein expression by regulating FBXW7-FOXO1 pathway

A-B. Western blotting of FBXW7, FOXO1 and PDK4 in the Creg1-CKO mice after DOX treatment ($n = 3$). **C-D.** Western blotting of FBXW7, FOXO1 and PDK4 in the Creg1-TG mice after DOX treatment ($n = 3$). **E.** Schematic diagram depicting the experimental strategy of PDK4 knockdown in Creg1^{fl/fl} mice and Creg1-CKO mice. **F.** Real-time PCR analysis of Pdk4 mRNA expression in the myocardium of Creg1^{fl/fl} mice after 21days of AAV-shPdk4 virus injection ($n = 3$). **G-H.** Western blotting of PDK4 protein in the myocardium of Creg1^{fl/fl} mice after 21days of AAV-shPdk4 virus injection ($n = 3$). DOX: doxorubicin, Creg1-CKO: Creg1 cardiac-specific knockout mice; Creg1^{fl/fl} mice: littermate control mice; Creg1-TG: Creg1 transgenic mice; WT mice: wild type mice. ** $p < 0.01$ vs. Creg1^{fl/fl} mice or WT mice or AAV-shcon; # $p < 0.05$, ## $p < 0.01$ vs. Creg1-CKO or Creg1-TG; & $p < 0.05$, && $p < 0.01$ vs. WT-DOX or Creg1^{fl/fl}-DOX.

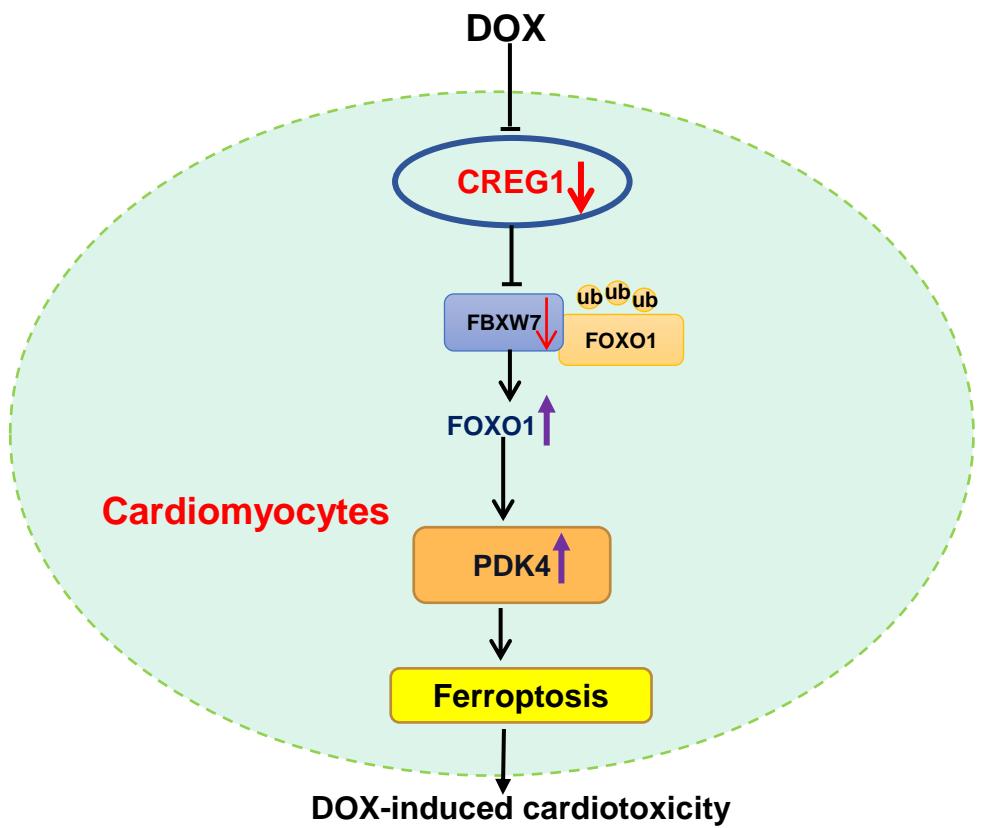

Figure S11. Mechanism diagram of CREG1 in DOX-induced cardiotoxicity

Table S1. Primers for real-time PCR

Primer name	Forward Primer (5'-3')	Reverse Primer (5'-3')
<i>Creg1</i>	CTTCGCGGACATCATCTCAAT	GTCAGCGTAGCCTCTGGATT
<i>Ptgs2</i>	CTGCGCCTTTCAAGGATGG	GGGGATACACCTCTCCACCA
<i>Pdk4</i>	CCGCTTAGTGAACACTCCTTC	TGACCAGCGTGTCTACAAACT
<i>Foxo1</i>	GGGTCCCACAGCAACGATG	CACCAGGGAATGCACGTCC
<i>Fbxw7</i>	GTTCCGCTGCCTAATCTTCCT	CCCTTCAGGGATTCTGTGCC
<i>Anp</i>	ACCTGCTAGACCACCTGGAG	CCTTGGCTGTTATCTCGGTACCGG
<i>Bnp</i>	GAGGTCACTCCTATCCTCTGG	GCCATTCCTCCGACTTTCTC
<i>18s</i>	TTGACGGAAGGGCACCAACAG	GCACCAACCACCCACGGAATCG
