

Supplementary Table 1 NMR chemical shifts of the Vpr-(52–96) protein in 30% C²H₃CN/70% water at 303 K, pH 3, calibrated to water
 Chemical shifts at 2 mM concentration might not be exactly the same as those observed in heteronuclear experiments. This is due to a slight difference in acetonitrile concentration.

Residues	¹⁵ N	NH	α H	β H	Others
D52		7.81	4.31	2.89, 2.94	
T53	114.18	8.33	4.16	3.93	γ CH ₃ 0.97
W54		7.93	4.47	3.22	2H 7.21; 4H 7.45; 5H 6.94; 6H 7.09; 7H 7.36; NH 9.97
