

Supplementary Figure 3

Supplementary figure 3. Association between the percentage change in *SUMO1* mRNA level and different white blood cell populations in peripheral blood of lung cancer patients. (A-D) The absolute counts of white blood cell (WBC), neutrophils (NEU), monocytes (MON) and lymphocytes (LYM) were compared among different groups based on the percentage change of *SUMO1*. (E-H) The percentages of lymphocyte subsets were compared among different groups based on the percentage change of *SUMO1*. Student's paired t-test, * $P < 0.05$.
