Abbreviations: ITT, Intent-to-Treat Analysis set; N, number of randomized subjects; n, number of subjects within each category;

Outcome definition, Reduction from baseline in SES-CD score \geq 50% and Harvey Bradshaw Index decrease \geq 3 points.

Proc Logistic used to generate Odds Ratios and P-values.

Variables included in the full model: Prior Crohn's Treatment Strata, Age, Sex, Age at diagnosis, disease phenotype, extraintestinal manifestations, C-Reactive Protein, Fecal Calprotectin, Albumin, EuroQoL-5D Health Questionnaire Score.

Variables not significant at the 0.15 level were removed from the model by backwards elimination. Effect estimations for each variable kept in the model after backwards elimination are reported.
