Supplementary Figure 14. TLR5 expression in ER+ cells from normal and cancer samples.

(a) Meta-analysis of published scRNA-seq experiments. The heat map shows the relative level of expression of the indicated genes (rows; gene of interest: TLR5; and marker of indicated cell types) across different populations. (b) Box plots showing the normalized expression values of the TLR5 gene across different cancer types, in bulk-RNA-seq samples from the TCGA.
