*- best fitting model for each antigen for each district; λ_0 - estimated seroconversion - Model 1, estimated seroconversion rate prior to the timepoint of change - Model 2; γ - proportional decline in transmission over time; ρ - seroreversion rate; λ_1 - seroconversion rate after timepoint of change for Model 2; TC- timepoint of change (years ago) where significant seroconversion rate decline was detected; GR- Gelman-Rubin statistic; ESS- effective sample size; LL- log-likelihood; DIC- deviance information criteria.; -ip- indicates that a previously published informative prior for γ and/or ρ was applied to this model.
