Last updated by author(s):	Ying li

Reporting Summary

Nature Portfolio wishes to improve the reproducibility of the work that we publish. This form provides structure for consistency and transparency in reporting. For further information on Nature Portfolio policies, see our <u>Editorial Policies</u> and the <u>Editorial Policy Checklist</u>.

$C \perp \sim$:
Sta	411	IST.	IC'S

For	all statistical analyses, confirm that the following items are present in the figure legend, table legend, main text, or Methods section.
n/a	Confirmed
	The exact sample size (n) for each experimental group/condition, given as a discrete number and unit of measurement
	A statement on whether measurements were taken from distinct samples or whether the same sample was measured repeatedly
	The statistical test(s) used AND whether they are one- or two-sided Only common tests should be described solely by name; describe more complex techniques in the Methods section.
	A description of all covariates tested
	A description of any assumptions or corrections, such as tests of normality and adjustment for multiple comparisons
	A full description of the statistical parameters including central tendency (e.g. means) or other basic estimates (e.g. regression coefficient) AND variation (e.g. standard deviation) or associated estimates of uncertainty (e.g. confidence intervals)
	For null hypothesis testing, the test statistic (e.g. <i>F</i> , <i>t</i> , <i>r</i>) with confidence intervals, effect sizes, degrees of freedom and <i>P</i> value noted <i>Give P values as exact values whenever suitable.</i>
	For Bayesian analysis, information on the choice of priors and Markov chain Monte Carlo settings
	For hierarchical and complex designs, identification of the appropriate level for tests and full reporting of outcomes
	Estimates of effect sizes (e.g. Cohen's <i>d</i> , Pearson's <i>r</i>), indicating how they were calculated
	Our web collection on <u>statistics for biologists</u> contains articles on many of the points above.

Software and code

Policy information about availability of computer code

Data collection

No software was used

Data analysis

All experimental data are expressed as means \pm standard deviation. One-way ANOVA was performed using SPSS 25.0 software, and the least significant difference method was used to compare different groups, with P < 0.05 indicating that the difference between them was statistically significant.

For manuscripts utilizing custom algorithms or software that are central to the research but not yet described in published literature, software must be made available to editors and reviewers. We strongly encourage code deposition in a community repository (e.g. GitHub). See the Nature Portfolio guidelines for submitting code & software for further information.

Data

Policy information about availability of data

All manuscripts must include a data availability statement. This statement should provide the following information, where applicable:

- Accession codes, unique identifiers, or web links for publicly available datasets
- A description of any restrictions on data availability
- For clinical datasets or third party data, please ensure that the statement adheres to our policy

Provide your data availability statement here.

Research invo	lving hui	man participants, their data, or biological material	
Policy information about		ith <u>human participants or human data</u> . See also policy information about <u>sex, gender (identity/presentation),</u> thnicity and racism.	
Reporting on sex an	sex and gender Not applicable		
Reporting on race, e other socially releva groupings		Not applicable	
Population characte	characteristics Not applicable		
Recruitment		Not applicable	
Ethics oversight		No human participants, data and biological material were involved	
Note that full informatio	n on the appro	oval of the study protocol must also be provided in the manuscript.	
Field-spec	ific re	porting	
Please select the one	below that is	the best fit for your research. If you are not sure, read the appropriate sections before making your selection.	
X Life sciences	В	ehavioural & social sciences Ecological, evolutionary & environmental sciences	
For a reference copy of the	document with a	all sections, see <u>nature.com/documents/nr-reporting-summary-flat.pdf</u>	
Life scienc	ces stu	ıdy design	
All studies must disclo	se on these	points even when the disclosure is negative.	
	This study focused on designing an animal model to investigate the effects of different types of peptides. A total of 40 mice were divided into five groups of ten mice each, including normal group, model group, anchovy peptide group, soybean peptide group, respectively.		
Data exclusions N	No date were excluded from the analyses		
Replication TI	The experimental data are set up with five parallel		
Randomization Ra	Randomised grouping of experimental animals		
Blinding	This study does not involve investigators		
Reporting for specific materials, systems and methods			
We require information from authors about some types of materials, experimental systems and methods used in many studies. Here, indicate whether each material, system or method listed is relevant to your study. If you are not sure if a list item applies to your research, read the appropriate section before selecting a response.

Antibodies

Antibodies used

Plants

Clinical data

Dual use research of concern

Describe all antibodies used in the study; as applicable, provide supplier name, catalog number, clone name, and lot number.

Eukaryotic cell lines

Policy information about cell lines and Sex and Gender in Research

Cell line source(s)

State the source of each cell line used and the sex of all primary cell lines and cells derived from human participants or

Describe the authentication procedures for each cell line used OR declare that none of the cell lines used were authenticated. Authentication

Confirm that all cell lines tested negative for mycoplasma contamination OR describe the results of the testing for Mycoplasma contamination mycoplasma contamination OR declare that the cell lines were not tested for mycoplasma contamination.

Commonly misidentified lines (See ICLAC register)

Name any commonly misidentified cell lines used in the study and provide a rationale for their use.

Palaeontology and Archaeology

Specimen provenance

Provide provenance information for specimens and describe permits that were obtained for the work (including the name of the issuing authority, the date of issue, and any identifying information). Permits should encompass collection and, where applicable, export.

Specimen deposition Indicate where the specimens have been deposited to permit free access by other researchers.

Dating methods If new dates are provided, describe how they were obtained (e.g. collection, storage, sample pretreatment and measurement), where they were obtained (i.e. lab name), the calibration program and the protocol for quality assurance OR state that no new dates are

provided.

 \rceil Tick this box to confirm that the raw and calibrated dates are available in the paper or in Supplementary Information.

Ethics oversight Identify the organization(s) that approved or provided guidance on the study protocol, OR state that no ethical approval or guidance was required and explain why not.

Note that full information on the approval of the study protocol must also be provided in the manuscript.

Animals and other research organisms

Policy information about studies involving animals; ARRIVE guidelines recommended for reporting animal research, and Sex and Gender in Research

C57BL/6 mice, female, 6 weeks old Laboratory animals

Wild animals This study did not involve wild animals

Female mice were used in this study for better control of variables Reporting on sex

Field-collected samples This study did not involve samples from the field

College of Food Science and Technology, Ocean University China Ethics oversight

Note that full information on the approval of the study protocol must also be provided in the manuscript.

Clinical data

Policy information about clinical studies

All manuscripts should comply with the ICMJE guidelines for publication of clinical research and a completed CONSORT checklist must be included with all submissions.

Provide the trial registration number from ClinicalTrials.gov or an equivalent agency. Clinical trial registration

Note where the full trial protocol can be accessed OR if not available, explain why. Study protocol

Describe the settings and locales of data collection, noting the time periods of recruitment and data collection. Data collection

Outcomes Describe how you pre-defined primary and secondary outcome measures and how you assessed these measures.

Dual use research of concern

Policy information about <u>dual use research of concern</u>

Hazards

Could the accidental, del in the manuscript, pose a	iberate or reckless misuse of agents or technologies generated in the work, or the application of information presented a threat to:	
No Yes Public health National security Crops and/or lives Ecosystems Any other significa		
Experiments of conce		
No Yes Demonstrate how Confer resistance Enhance the virule Increase transmiss Alter the host rang Enable evasion of Enable the weapo	to render a vaccine ineffective to therapeutically useful antibiotics or antiviral agents ence of a pathogen or render a nonpathogen virulent sibility of a pathogen ge of a pathogen diagnostic/detection modalities nization of a biological agent or toxin ally harmful combination of experiments and agents	
Seed stocks	Report on the source of all seed stocks or other plant material used. If applicable, state the seed stock centre and catalogue number. If plant specimens were collected from the field, describe the collection location, date and sampling procedures.	
Novel plant genotypes Authentication	Describe the methods by which all novel plant genotypes were produced. This includes those generated by transgenic approaches, gene editing, chemical/radiation-based mutagenesis and hybridization. For transgenic lines, describe the transformation method, the number of independent lines analyzed and the generation upon which experiments were performed. For gene-edited lines, describe the editor used, the endogenous sequence targeted for editing, the targeting guide RNA sequence (if applicable) and how the editor was applied. Describe any authentication procedures for each seed stock used or novel genotype generated. Describe any experiments used to assess the effect of a mutation and, where applicable, how potential secondary effects (e.g. second site T-DNA insertions, mosiacism, off-target gene editing) were examined.	
ChIP-seq		
Data deposition Confirm that both raw and final processed data have been deposited in a public database such as GEO. Confirm that you have deposited or provided access to graph files (e.g. BED files) for the called peaks.		
Data access links May remain private before publ	For "Initial submission" or "Revised version" documents, provide reviewer access links. For your "Final submission" document, provide a link to the deposited data.	
Files in database submiss	Provide a list of all files available in the database submission.	
Genome browser session (e.g. <u>UCSC</u>)	Provide a link to an anonymized genome browser session for "Initial submission" and "Revised version" documents only, to enable peer review. Write "no longer applicable" for "Final submission" documents.	

Methodology	
Replicates	Describe the experimental replicates, specifying number, type and replicate agreement.
Sequencing depth	Describe the sequencing depth for each experiment, providing the total number of reads, uniquely mapped reads, length of reads and whether they were paired- or single-end.
Antibodies	Describe the antibodies used for the ChIP-seq experiments; as applicable, provide supplier name, catalog number, clone name, and lot number.
Peak calling parameters	Specify the command line program and parameters used for read mapping and peak calling, including the ChIP, control and index files used.
Data quality	Describe the methods used to ensure data quality in full detail, including how many peaks are at FDR 5% and above 5-fold enrichment.

Describe the software used to collect and analyze the ChIP-seq data. For custom code that has been deposited into a community

Flow Cytometry

Plots	
Confirm	that:

Software

001111111111111111111111111111111111111	
The axis labels state the m	arker and fluorochrome used (e.g. CD4-FITC).
The axis scales are clearly v	visible. Include numbers along axes only for bottom left plot of group (a 'group' is an analysis of identical markers).
All plots are contour plots	with outliers or pseudocolor plots.
A numerical value for num	ber of cells or percentage (with statistics) is provided.
Methodology	
Sample preparation	Describe the sample preparation, detailing the biological source of the cells and any tissue processing steps used.
Instrument	Identify the instrument used for data collection, specifying make and model number.
Software	Describe the software used to collect and analyze the flow cytometry data. For custom code that has been deposited into a community repository, provide accession details.
Cell population abundance	Describe the abundance of the relevant cell populations within post-sort fractions, providing details on the purity of the samples and how it was determined.
Gating strategy	Describe the gating strategy used for all relevant experiments, specifying the preliminary FSC/SSC gates of the starting cell population, indicating where boundaries between "positive" and "negative" staining cell populations are defined.
Tick this box to confirm that	at a figure exemplifying the gating strategy is provided in the Supplementary Information.

Magnetic resonance imaging

Behavioral performance measures

Experimental design

Design type Indicate task or resting state; event-related or block design.

repository, provide accession details.

Design specifications Specify the number of blocks, trials or experimental units per session and/or subject, and specify the length of each trial or block (if trials are blocked) and interval between trials.

State number and/or type of variables recorded (e.g. correct button press, response time) and what statistics were used to establish that the subjects were performing the task as expected (e.g. mean, range, and/or standard deviation across subjects).

Acquisition		
Imaging type(s)	Specify: fu	nctional, structural, diffusion, perfusion.
Field strength Specify in		Tesla
		e pulse sequence type (gradient echo, spin echo, etc.), imaging type (EPI, spiral, etc.), field of view, matrix size, ness, orientation and TE/TR/flip angle.
Area of acquisition	State when	ther a whole brain scan was used OR define the area of acquisition, describing how the region was determined.
Diffusion MRI Used	☐ Not u	sed
Preprocessing		
Preprocessing software	Provide detail on software version and revision number and on specific parameters (model/functions, brain extraction, segmentation, smoothing kernel size, etc.).	
Normalization	If data were normalized/standardized, describe the approach(es): specify linear or non-linear and define image types used for transformation OR indicate that data were not normalized and explain rationale for lack of normalization.	
Normalization template	Describe the template used for normalization/transformation, specifying subject space or group standardized space (e.g. original Talairach, MNI305, ICBM152) OR indicate that the data were not normalized.	
Noise and artifact removal	Describe your procedure(s) for artifact and structured noise removal, specifying motion parameters, tissue signals and physiological signals (heart rate, respiration).	
Volume censoring	Define your soft	ware and/or method and criteria for volume censoring, and state the extent of such censoring.
Statistical modeling & infere	ence	
Model type and settings	Specify type (mass univariate, multivariate, RSA, predictive, etc.) and describe essential details of the model at the first and second levels (e.g. fixed, random or mixed effects; drift or auto-correlation).	
Effect(s) tested	Define precise effect in terms of the task or stimulus conditions instead of psychological concepts and indicate whether ANOVA or factorial designs were used.	
Specify type of analysis: W	hole brain	ROI-based Both
Statistic type for inference	Specify voxel-wi	se or cluster-wise and report all relevant parameters for cluster-wise methods.
(See Eklund et al. 2016)		
Correction	Describe the typ	be of correction and how it is obtained for multiple comparisons (e.g. FWE, FDR, permutation or Monte Carlo).
Models & analysis n/a Involved in the study		
Functional and/or effective connectivity Graph analysis Multivariate modeling or predictive analysis		
Functional and/or effective conn	Functional and/or effective connectivity Report the measures of dependence used and the model details (e.g. Pearson correlation, partial corremutual information).	
Graph analysis		Report the dependent variable and connectivity measure, specifying weighted graph or binarized graph, subject- or group-level, and the global and/or node summaries used (e.g. clustering coefficient, efficiency, etc.).
Multivariate modeling and predictive analysis Specify independent variables, features extraction and dimension reduction, model, training and evaluation. metrics.
