

Supplementary Material

The data extracted and presented in the bar chart below highlights the differences across England in the uptake of ticagrelor 60mg by crude volume(1).

The uptake of extended DAPT is broadly quite low in England and our locality (West Yorkshire Integrated Care Board (ICB)) is outstanding in comparison. We are the second highest user across the country. This is potentially due to the extended DAPT service we provide.

Sheffield and Rotherham, from the South Yorkshire ICB, were two of the sites for the PEGASUS study.
