

**Note to readers with disabilities:** *EHP* strives to ensure that all journal content is accessible to all readers. However, some figures and Supplemental Material published in *EHP* articles may not conform to [508 standards](#) due to the complexity of the information being presented. If you need assistance accessing journal content, please contact [ehpsubmissions@niehs.nih.gov](mailto:ehpsubmissions@niehs.nih.gov). Our staff will work with you to assess and meet your accessibility needs within 3 working days.

### **Supplemental Material**

#### **Associations between Aircraft Noise, Sleep, and Sleep–Wake Cycle: Actimetric Data from the UK Biobank Cohort near Four Major Airports**

Xiangpu Gong, Katie Eminson, Glory O. Atilola, Calvin Jephcote, Kathryn Adams, Gabriella Captur, Andrew P. Hall, Marta Blangiardo, John Gulliver, Alex V. Rowlands, and Anna L. Hansell

#### **Table of Contents**

**Table S1.** Sleep disturbance outcomes – name, definition, data range, and interpretation – as included in the UK Biobank questionnaire or actimetrically measured.

**Table S2.** Field IDs or return ID of the variables used in the study and their descriptions.

#### **Main models – STATA code**

**Figure S1.** Directed Acyclic Graph (DAG) identifying potential confounders for the relationship between night-time aircraft noise exposure and sleep disturbance.

#### **Sensitivity Analysis**

**Figure S2.** Cross-sectional association between night-time aircraft noise and average acceleration during the least active 8 hours while excluding subgroups susceptible to noise misclassification using UK Biobank cohort.

**Figure S3.** Cross-sectional association between night-time aircraft noise and proportion of time spent on sleep or in bed (7-day average) while excluding subgroups susceptible to noise misclassification using UK Biobank cohort.

**Figure S4.** Cross-sectional association between night-time aircraft noise and relative amplitude while excluding subgroups susceptible to noise misclassification using UK Biobank cohort.

**Figure S5.** Cross-sectional association between night-time aircraft noise and intra-daily variability while excluding subgroups susceptible to noise misclassification using UK Biobank cohort.

**Figure S6.** Cross-sectional association between night-time aircraft noise and inter-daily stability while excluding subgroups susceptible to noise misclassification using UK Biobank cohort.

**Figure S7.** Repeated cross-sectional association between night-time aircraft noise and self-reported sleeplessness while excluding subgroups susceptible to noise misclassification using UK Biobank cohort.

**Figure S8.** Repeated cross-sectional association between night-time aircraft noise and self-reported daytime dozing while excluding subgroups susceptible to noise misclassification using UK Biobank cohort.

**Figure S9.** Repeated cross-sectional association between night-time aircraft noise and self-reported sleep duration while excluding subgroups susceptible to noise misclassification using UK Biobank cohort.

**Figure S10.** Cross-sectional association between night-time aircraft noise and average acceleration during the least active 8 hours among some demographic or socioeconomic groups using UK Biobank cohort.

**Figure S11.** Cross-sectional association between night-time aircraft noise and proportion of time spent on sleep or in bed (7-day average) among some demographic or socioeconomic groups using UK Biobank cohort.

**Figure S12.** Cross-sectional association between night-time aircraft noise and relative amplitude among some demographic or socioeconomic groups using UK Biobank cohort.

**Figure S13.** Cross-sectional association between night-time aircraft noise and intra-daily variability among some demographic or socioeconomic groups using UK Biobank cohort.

**Figure S14.** Cross-sectional association between night-time aircraft noise and inter-daily stability among some demographic or socioeconomic groups using UK Biobank cohort.

**Figure S15.** Repeated cross-sectional association between night-time aircraft noise and self-reported sleeplessness among some demographic or socioeconomic groups using UK Biobank cohort.

**Figure S16.** Repeated cross-sectional association between night-time aircraft noise and self-reported daytime dozing among some demographic or socioeconomic groups using UK Biobank cohort.

**Figure S17.** Repeated cross-sectional association between night-time aircraft noise and self-reported sleep duration among some demographic or socioeconomic groups using UK Biobank cohort.

**Figure S18.** Cross-sectional association between night-time aircraft noise and average acceleration during the least active 8 hours among people with health conditions linked to sleep disturbance using UK Biobank cohort.

**Figure S19.** Cross-sectional association between night-time aircraft noise and proportion of time spent on sleep or in bed (7-day average) among people with health conditions linked to sleep disturbance using UK Biobank cohort.

**Figure S20.** Cross-sectional association between night-time aircraft noise and relative amplitude among people with health conditions linked to sleep disturbance using UK Biobank cohort.

**Figure S21.** Cross-sectional association between night-time aircraft noise and intra-daily variability among people with health conditions linked to sleep disturbance using UK Biobank cohort.

**Figure S22.** Cross-sectional association between night-time aircraft noise and inter-daily stability among people with health conditions linked to sleep disturbance using UK Biobank cohort.

**Figure S23.** Repeated cross-sectional association between night-time aircraft noise and self-reported sleeplessness among people with health conditions linked to sleep disturbance using UK Biobank cohort.

**Figure S24.** Repeated cross-sectional association between night-time aircraft noise and self-reported daytime dozing among people with health conditions linked to sleep disturbance using UK Biobank cohort.

**Figure S25.** Repeated cross-sectional association between night-time aircraft noise and self-reported sleep duration among people with health conditions linked to sleep disturbance using UK Biobank cohort.
