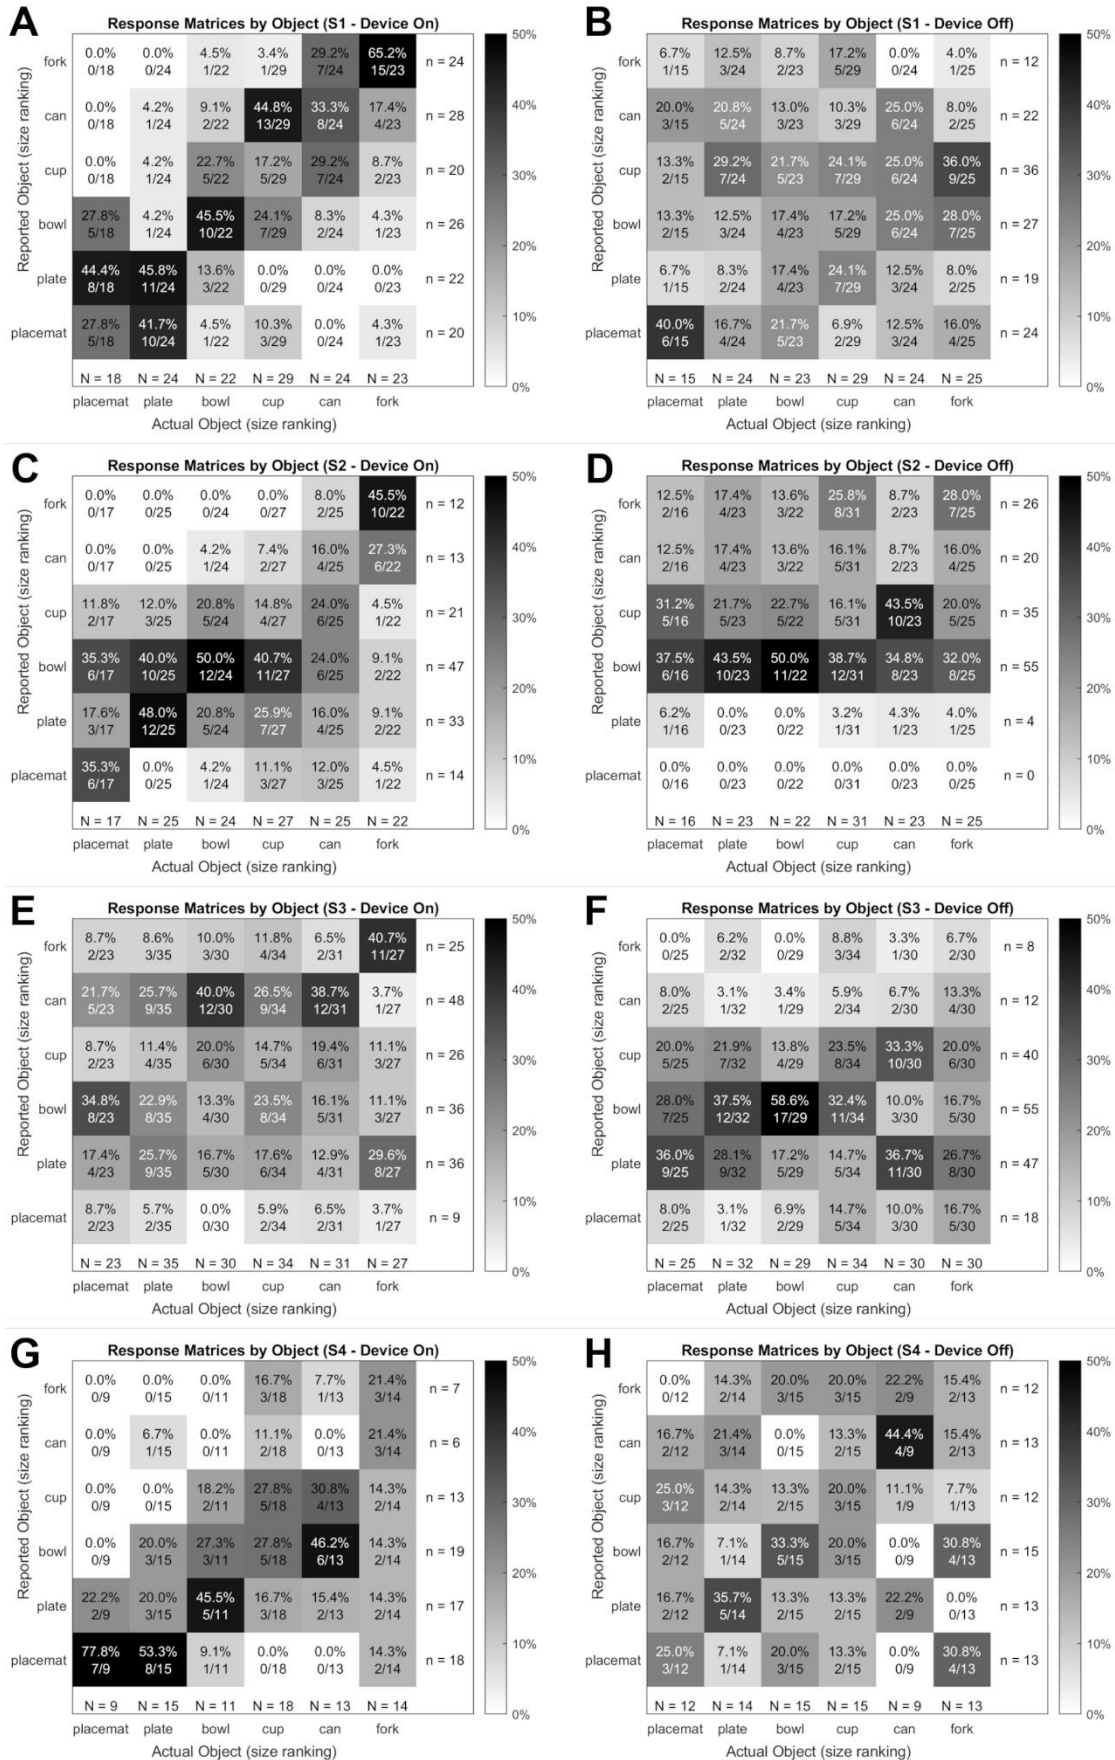

Figure S11: Response Matrices for Tabletop Object Identification per participant (S1, S2, S3, S4), pooled from all time-points, with Device On (**A,C,E,G**) and Device Off (**B,D,F,H**). Objects are ranked in size order. Darker cells indicate higher incidence of Reported Object (y-axis) for a given Actual Object (x-axis). Cell text indicates incidence percent and fraction of actual object incidence. Row numerator totals, n , are the response incidence. Column numerator totals, N , are the total object incidence. Correct responses fall on the diagonal line of cells from bottom-left to top-right. Note that the color-bar saturates at 50% to differentiate lower scores.
