

**Supplementary Table S2.** Six month outcomes of aortic procedures performed for abdominal aortic aneurysms ( $n = 370$ ) stratified by indication and urgency of the procedure.

	<b>Elective/ expedited</b>	<b>Urgent non- ruptured</b>	<b>Ruptured</b>
<b>30-day outcomes</b>			
Non-SARS-CoV-2 pneumonia	9 (3.3)	4 (9.1)	8 (17.4)
Mortality	18 (6.5)	10 (22.7)	16 (34.8)
<b>6-month outcomes</b>			
Mortality	21 (7.6)	12 (27.3)	17 (37.0)
Myocardial infarction	14 (5.1)	5 (11.4)	9 (19.6)
Non-SARS-CoV-2 pneumonia	23 (8.3)	4 (9.1)	15 (32.6)
Re-intervention	25 (9.0)	5 (11.4)	9 (19.6)

Data are presented as n (%).

Indications for surgery for elective/expedited and urgent non-ruptured aneurysms included reaching size threshold, rapid growth, or being symptomatic.
