

Supplementary Figure S9. Association between the $KIR2DL2/DL3+NKs/Helios+Tregs$ values and response to nivolumab treatment. Using the optimal cut-off value of $>35.3\%$ for $KIR2DL2/DL3+NKs$ and $>34.3\%$ $Helios+Tregs$, patients were divided in three groups, Low-Low, High-Low, Low-High and High-High, and the percentage of nivolumab responses was reported.
