1 **Figure S1. Model-estimated proportions of patients achieving scores of 0 in**

2 **each DLQI item at different PASI improvement levels**

3 **A) Over 16 weeks**

4 **B) Over 2 years**

5 A mixed-effects logistic regression model used data pooled across all trial visits and
6 treatments over a) 16 weeks and b) 2 years of BE RADIANT to estimate the proportions of
7 patients achieving DLQI item score=0 at specific PASI improvement levels. [a] For DLQI
8 Items 3–10, an item score of 0 ('not relevant') may mean that the activity in question is not
9 possible, sometimes due to severe disease, rather than there being no impact of disease on
10 the activity. Model estimates were calculated with baseline DLQI item scores equal to the
11 baseline median for the respective populations (16 weeks: all randomised patients; 2 years:
12 patients who entered the OLE). DLQI: Dermatology Life Quality Index; PASI: Psoriasis Area
13 and Severity Index.

Table S1. Data collection schedule

Outcome	Week of BE RADIANT																				
	0	**1**	**2**	**4**	**8**	**12**	**16**	**20**	**24**	**28**	**32**	**36**	**40**	**44**	**48[a]**	**52**	**56**	**64**	**72**	**84**	**96**
PASI	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X	X
DLQI	X			X	X	X	X				X				X				X		X
P-SIM	X			X	X	X	X				X				X		X	X	X	X	X

[a] The OLE began at Week 48. DLQI: Dermatology Life Quality Index; OLE: open-label extension; PASI: Psoriasis Area and Severity Index; P-SIM: Psoriasis Symptoms and Impacts Measure.
