PrescDRL: Deep reinforcement learning for herbal prescription planning in treatment of chronic diseases

1. Case study

In this section, we provide three examples of treatment process comparison given by doctors and PrescDRL. In the first example (Table S1), the algorithm performed better than the doctor. In the second example (Table S2), the doctor performed better than the algorithm, and in the third example (Table S3), both the doctor and the algorithm performed better.
