**S4 Table. Localisation phase total power analysed locally by the partners.** The table shows estimated means, standard error, lower confidence limit (CL), and upper confidence limit (CL) of WT and TG groups, as well as their contrasts (TG-WT). The p-value was derived from the statistical models run per laboratory on log<sub>10</sub> total power data. Note that p-values are not provided for individual means as this was not of interest in this study.
