

Supplemental Figure S4: Effect of the combination of MRTX1133 and Venetoclax on the weights of tumor-bearing mice. Mice with 2138, 3213, and 1245 tumors (~250-300mm³) were treated with vehicle control (DMSO), Venetoclax (15mg/kg daily), MRTX1133 (30mg/kg 2x/day), or the combination of Venetoclax and MRTX1133. The weights of the mice until they reached the study endpoints are shown here. Error bars \pm SD, n=4-6.
