Supplementary figures

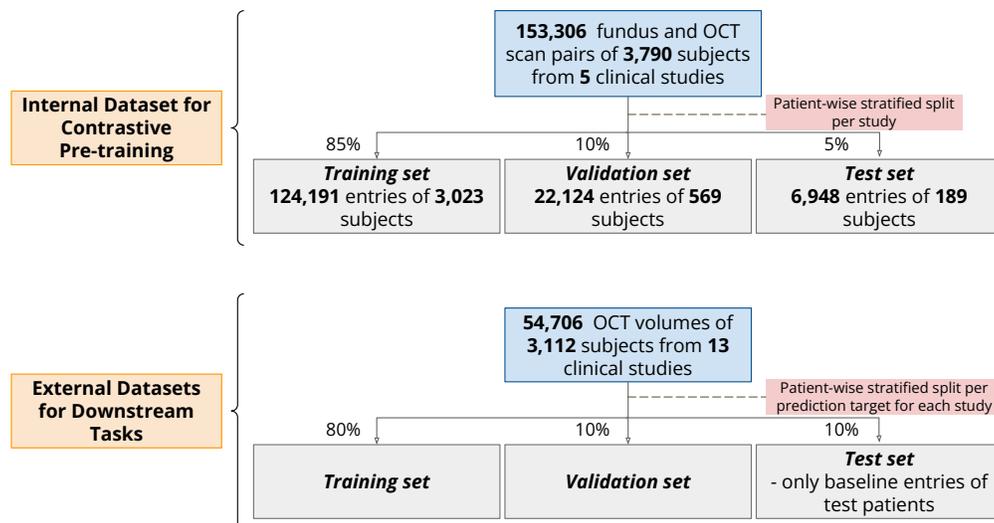

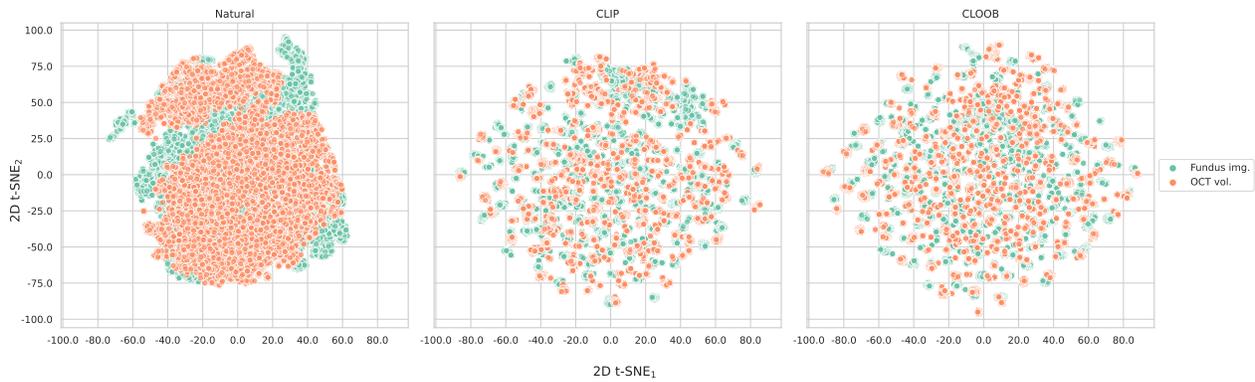

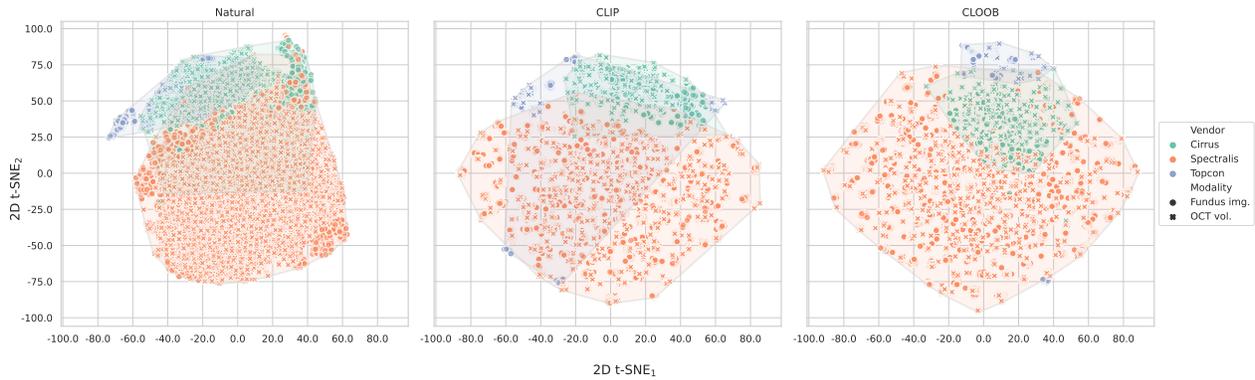

Figure A1. Flow chart of the data splits for the contrastive pre-training and external downstream task.

(a) t-SNE projections colored by imaging modality.

(b) t-SNE projections colored by imaging vendor.

Figure A2. Visualizations of latent representations using t-SNE projections created from the embeddings of two retinal imaging modalities in the hold-out test set. These visualizations compare embeddings obtained using natural image-based pre-trained weights with those obtained using CLIP and CLOOB contrastive weights for the 2D and 3D encoders.
