

**Supplementary Table C: JSSc skin-specific organ involvement questions**

Question	Answer	N (%)
20. For skin disease, choose the reasons that you would consider referral for ASCT. The skin reasons could indicate severe disease, progressive disease, and/or severe quality of life impairment (check all that apply) ( <i>N=19</i> )	-Skin thickening	18 (95%)
	-Calcinosis	11 (57%)
	-Non-vascular ulcers	11 (57%)
	-Oral/facial dysfunction	12 (63%)
	-Other- not listed (list)	3 (16%) (contractures)
21. For skin disease, please rank your reasons that you would consider referral for ASCT. The skin reasons could indicate severe disease, progressive disease, and/or severe quality of life impairment. ( <i>N=13</i> ) <i>*only answers selected in Q20 were available to rank</i>		<b>Ranked #1</b>
	-Skin thickening	8 (62%)
	-Calcinosis	2 (15%)
	-Non-vascular ulcers	3 (23%)
	-Oral/facial dysfunction	0 (0%)
	-Other- not listed	0 (0%)
22. For skin thickening as measured by modified Rodnan Skin Score (mRSS), which would you consider to be an indication for referral for ASCT? ( <i>N=19</i> )	-High mRSS only	0 (0%)
	-Progressive worsening of mRSS only	2 (11%) 17 (89%)
	-Both high or progressive worsening of mRSS	0 (%)
	-None-mRSS is not important	
22. Would you refer for ASCT only because of skin disease severity or progressive worsening? ( <i>N=19</i> )	-Yes	10 (53%)
	-No- would also need to have other organ system(s) with severe or worsening disease	9 (47%)
These questions were only provided to the 19 respondents who selected skin as organ system involvement which would be a consideration for jSSc referral for ASCT (Question 18).
