

**Supplementary Table G: JSSc musculoskeletal specific organ involvement questions**

Question	Answer	N (%)
33. For musculoskeletal (MSK) disease, please chose the reasons that you would consider referral for ASCT. The MSK reasons could indicate severe disease, progressive disease, and/or severe quality of life impairment. (Check all that apply) (N=8)	- Tenosynovitis	4 (50%)
	- Myositis	5 (63%)
	- Muscle weakness/myopathy	5 (63%)
	- Respiratory muscle weakness	8 (100%)
	- Other- not listed	0 (0%)
34. For musculoskeletal (MSK) disease, please rank the reasons that you would consider referral for ASCT. The MSK reasons could indicate severe disease, progressive disease, and/or severe quality of life impairment. (Check all that apply) <i>*only selected answers in Q33 were available for ranking. (N=7)</i>		<b>Ranked #1</b>
	- Tenosynovitis	0 (0%)
	- Myositis	2 (29%)
	- Muscle weakness/myopathy	1 (14%)
	- Respiratory muscle weakness	4 (57%)
- Other- not listed	0 (0%)	
35. Would you refer to ASCT only because of MSK disease severity, progressive worsening, or severe impairment of quality of life? (N=8)	- Yes	3 (38%)
	- No – would also need to have other organ system(s) with severe or worsening disease	5 (62%)
These questions were only provided to the 8 respondents who selected musculoskeletal as organ system involvement which would be a consideration for jSSc referral for ASCT (Question 18).
