

**Supplementary Fig. S4. Examples of expression patterns of CagA and NFATc1 in tumor cells of HPE-responsive gastric MALT lymphoma** (A) CagA expression was found in the tumor cells of gastric mucosa or submucosa in three sample cases of HPE-responsive gastric MALT lymphoma (case 1#, case 3#, and case 4#) (all images  $\times 400$ ) (B) Nuclear NFATc1 expression was found in the same cases of tumor cells of gastric mucosa or submucosa. (case 1#, case 3#, and case 4#) (all images  $\times 400$ ). CagA, cytotoxin-associated gene A; NFAT, nuclear factor of activated T cells; HP, *Helicobacter pylori*; MALT, mucosa-associated lymphoid tissue.
