Appendix 2

Preferred Reporting Items for Systematic Review and Meta-analyses (PRISMA) Individual Patient Data (IPD) Study Selection Process

CU = Cardiff University; CBT-TF = cognitive behavioral therapy with a trauma focus; RCT = randomized controlled trial; k = number of studies

Appendix 3

Definitions of the CBT-TF interventions for PTSD

Intervention	Description
Brief Eclectic Psychotherapy ^a <i>BEP</i>	BEP merges aspects of CBT with psychodynamic therapy, emphasizing the emotional processing of trauma. It often incorporates writing exercises, therapeutic correspondence, and discussions on existential topics, with a strong focus on the therapeutic relationship. The therapy typically concludes with a farewell ritual.
Cognitive Behavioural Therapy with a Trauma Focus ^b <i>CBT-TF</i>	CBT-TF encompasses various therapies aimed at assisting those with PTSD by altering their thoughts, beliefs, and behaviors. This method typically involves educational sessions, exposure exercises, cognitive techniques, and relaxation or stress management strategies, though the emphasis on each component may differ depending on the specific form of CBT-TF.
Cognitive Behavioural Therapy for Trauma-Focused Coping ^c <i>COPE</i>	COPE is tailored for treating individuals with both PTSD and substance use disorders. It integrates traditional CBT methods with trauma-focused strategies to address trauma and substance use simultaneously, helping individuals develop coping mechanisms, reduce substance use, and enhance overall functioning.
Cognitive Therapy for PTSD ^d <i>CPT</i>	CPT focuses on evaluating and modifying problematic thoughts that arise after traumatic events, such as beliefs that the individual is to blame or that the world is unsafe. It may also involve creating a detailed written narrative of the traumatic experience.
Narrative Exposure Therapy ^e <i>NET</i>	NET is designed for individuals with multiple or complex traumas. It involves creating a detailed life narrative, focusing on traumatic experiences to help integrate these memories into the broader life story, reducing their emotional impact.
Prolonged Exposure Therapy ^f <i>PE</i>	PE involves repeated and detailed exposure to trauma-related memories, feelings, and situations to reduce distress. The approach typically includes recounting traumatic experiences and real-life exposure to fear-evoking but safe situations to promote habituation.
Reconsolidation of Traumatic Memories ^g <i>RTM</i>	RTM involves activating a traumatic memory and then using a technique where the individual imagines the event as a black-and-white movie, dissociated from its content, and re-winds it quickly to change the memory's perspective.
Skills Training in Affective and Interpersonal Regulation with Narrative Therapy ^h <i>STAIR-NT</i>	STAIR-NT is a therapeutic method that combines emotional regulation skills training with narrative therapy to help individuals process and reframe their traumatic experiences, particularly in cases of complex trauma.
Trauma-Informed Present-Centered Safety Skills ⁱ <i>TIPSS</i>	TIPSS is a specialized CBT approach for individuals with PTSD who are not ready for trauma-focused exposure therapies. It focuses on developing safety skills, emotional regulation, and present-centered awareness, emphasizing coping strategies without delving deeply into traumatic details.
Trial-based cognitive therapy ^j <i>TBCBT</i>	TBCBT is a structured form of cognitive therapy designed to address and modify maladaptive beliefs and cognitive distortions that sustain PTSD. This therapy is conducted through a series of "trials," where patients critically assess their negative beliefs in a court-like setting, helping them to re-evaluate and restructure their thoughts.

COPE = Concurrent treatment of PTSD and substance use disorders using Prolonged Exposure; CPT = Cognitive Processing Therapy; CBT-TF = Cognitive Behavioral Therapy with a Trauma Focus; STAIR-NT = Skills Training in Affective and Interpersonal Regulation with Narrative Therapy; PE = Prolonged exposure therapy; BEP = Brief eclectic psychotherapy; NET = Narrative exposure therapy; NET = Narrative exposure therapy – revised; RTM = Reconsolidation of Traumatic Memories; TIPPS = Treatment of Integrated Posttraumatic Stress and Substance Use; mixed = both military personnel/veteran and general population; USA = United States of America.

Appendix 6

Summary of participant characteristics (N = 823)

	n (k)	M	SD
Age (years)	794 (25)	39.81	13.47
Years of education	429 (10)	14.06	2.74
	n	%	
Age groups (years)	794 (25)		
18-29	219	27.58	
30-39	196	24.69	
40-49	178	24.69	
50 to 59	137	17.25	
60-69	45	5.67	
70-80	19	2.39	
Gender	822 (28)		
male	326	39.66	
female	496	60.34	
Race	353 (9)		
white	244	69.12	
african american/black	91	25.78	
other ¹	18	5.11	
Relationship status	535 (19)		
single/ cohabitating	211	39.44	
married	199	37.20	
divorced	98	18.32	
widowed	13	2.43	
separated	14	2.62	
Marital status	535 (19)		
unmarried	322	60.19	
married	213	39.81	
Employment status	289 (12)		
unemployed	73	25.26	
employed	131	45.33	
student	11	3.81	
retired	21	7.27	
homemaker	23	7.9	
disabled	30	10.38	
Psychotropic medication at baseline	528 (15)		
no	233	44.13	
yes	295	55.87	
Trauma type	469 (17)		
accident/disaster	79	16.84
