9. ThT-based aggregation kinetics background readings

Figure S9. Background readings of compounds 4a–d and 5a–d (25 μM each), with ThT in the absence of Aβ₄₂ at 37 °C in phosphate buffer after 24 h incubation. Aggregation kinetics were monitored by ThT at 440 nm excitation and 490 nm emission. Results are averages of three independent experiments in triplicate measurements.

10. Effect of compounds 4a–d and 5a–d on preformed A β 42 aggregates

Figure S10. The effect of compounds 4a–d and 5a–d (25 μ M each) on preformed A β 42 (10 μ M), was determined using ThT fluorescence at 37 $^{\circ}$ C in phosphate buffer after 24 h incubation. Aggregation kinetics were monitored by ThT (440 nm excitation and 490 nm emission). Results are averages of two independent experiments (n = 3).

11. Congo red UV assay for compounds 4b, 4d, 5b, 5d and resveratrol (RVT)

Figure S11. CR-assay curve of Aβ42 (20 μM) in the presence and absence of **4b**, **4d**, **5b**, **5d** and RVT at 25 μM. The CR assay absorbance was measured by UV scanning from 450– 600 nm after 24 h incubation at 37 °C. Results are averages of two independent experiments (n = 3).

12. Table S1. Physicochemical properties of 4a–d and 5a–d calculated using the web tool SwissADME

Compd	Molecular Weight	No. of H-Bond Acceptors	Donors	Number of Rotatable Bonds	Polar Surface Area (TPSA) Å²	Consensus Log P	BBB Perm.
4a	283.28	4	2	4	71.70	2.54	Yes
4b	283.28	4	2	4	71.70	2.50	Yes
4c	297.31	4	1	5	60.70	2.88	Yes
