

Supplemental file: Grønlund et al. Arterial spin labeling MRI for acute disorders of consciousness in the ICU

Figure S1: Box and whisker plot showing CBF levels of the best (“max hemi”) and worst (“min hemi”) hemispheres all DoC patients measured at 1.5T ALS-MRI.

Figure S2: Best hemispheric CBF of \leq UWS and \geq MCS patients and of healthy controls (right hemisphere) as a function of hemoglobin levels. All groups showed decreasing CBF with increasing hemoglobin levels.
