Supplemental Table 1 depicts pharmacokinetic parameters of cattle and buffalo injected with standard and long-lasting ivermectin.

Parameters were presented as median (min, max). Administered doses were presented as dose in mg and dose per weight in  $\mu\text{g}/\text{kg}$ .

Pharmacokinetic parameters include area under the concentration-time curve (AUC), dose normalized AUC, maximum concentration ( $C_{\max}$ ), dose normalized  $C_{\max}$  and half-life.
