- 2 Translation of Psychological Safety Scale
- 3 Our study "Healthcare professionals' perception of the World Health Organization Surgical Safety
- 4 Checklist and psychological safety: a cross-sectional survey", used a Danish translation (Table S1) of
- 5 Edmondsons<sup>1</sup> Psychological Safety Scale (PSS), which was originally developed and validated in
- 6 English. In a five-step process, we translated PSS into Danish using WHO translation guidelines<sup>2</sup> to
- 7 ensure the validity of the outcome data. A professional bilingual Danish-English translator did the
- 8 forward translation, and a professional native English-speaking translator did a blind backward
- 9 translation into English. In step 3, three researchers met to reach consensus on the Danish translation,
- a process that resulted in the final translation (Figure S1).

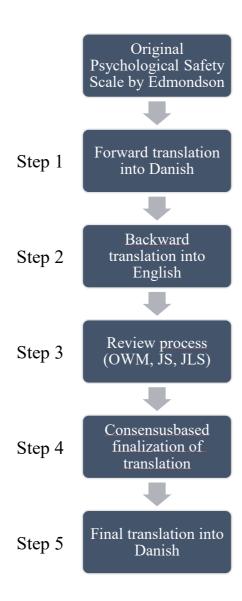

Figure S1: Overview of the five-step translation into Danish.

All analysis are adjusted for multiple testing. CI, Confidence Interval; PSS, Psychological Safety Score; SSC, Surgical Safety Checklist

**Table S5**: Associations between Psychological Safety Sum score and perceptions of Surgical Safety Checklist, adjusted for age and profession.

Outcome	Exposure	Difference, (CI 95%)	p-value
Psychological Safety Scale sum	1. I have received training in the clinical use of SSC	0.62 (-0.14 to 1.39)	0.11
score	2. I am familiar with other staff groups' important items on the SSC	0.8 (0.04 to 1.57)	0.04*
	3. My colleagues listen when I review SSC items	1.25 (0.36 to 2.14)	0.006
	4. SSC works best when only one person reviews all items on the checklist throughout all three phases (sign in, timeout, and sign out)	0.66 (-0.06 to 1.37)	0.07
	5. A visualization of SSC (e.g. poster) would help me review SSC items	0.05 (-0.64 to 0.75)	0.88
	6. SSC increases patient safety in the operating room	0.93 (-0.04 to 1.89)	0.06
	7. SSC provides the opportunity to reflect on the operation	0.71 (-0.07 to 1.49)	0.08
	8. SSC provides structure in the operating room	0.86 (0.15 to 1.57)	0.02
	9. SSC enhances interdisciplinary teamwork in the operating room	1.1 (0.53 to 1.78)	0.002

10. SSC consumi	is unnecessarily time- ng	-1.37 (-2.27 to -0.46)	0.004
couple o operation	uld be a good idea to add a f minutes to reflect on the n that just took place in tion of the 'timeout phase'	-0.05 (-0.69 to 0.59)	0.89
impleme	k that there is a need to nt a project on training to correctly	0.16 (-0.44 to 0.75)	0.61

\* When looking at this association, an observation with a low SSC item score and a low psychological safety score was seen, and when removing this one influential observation, the association did not persist (0.6, 95 % CI -0.15 to 1.43, p=0.11). We therefore did not consider this as an association.

CI, Confidence Interval; PSS, Psychological Safety Score; SSC, Surgical Safety Checklist
