

Fig. S1. CENP-C is required for PLK-1 kinetochore localisation. (A) Immunofluorescence analysis using a specific anti-PLK-1 antibody was carried out in wild type and CENP-C PD^{mut} embryos at metaphase. Scale bar, 5 μm. (B) Fluorescently labelled BUB-1 was followed throughout mitosis in wild type and CENP-C PD^{mut} embryos. Scale bar, 5 μm. (C) Chromosomal BUB-1 levels were quantified and normalised to the chromosome (histone) signal. Individual values are shown and the dashed line represents the median. ‘n’ denotes the number of embryos analysed. Wild type and CENP-C PD^{mut} embryos were compared using a non-parametric test (Mann-Whitney) and the P value is shown.

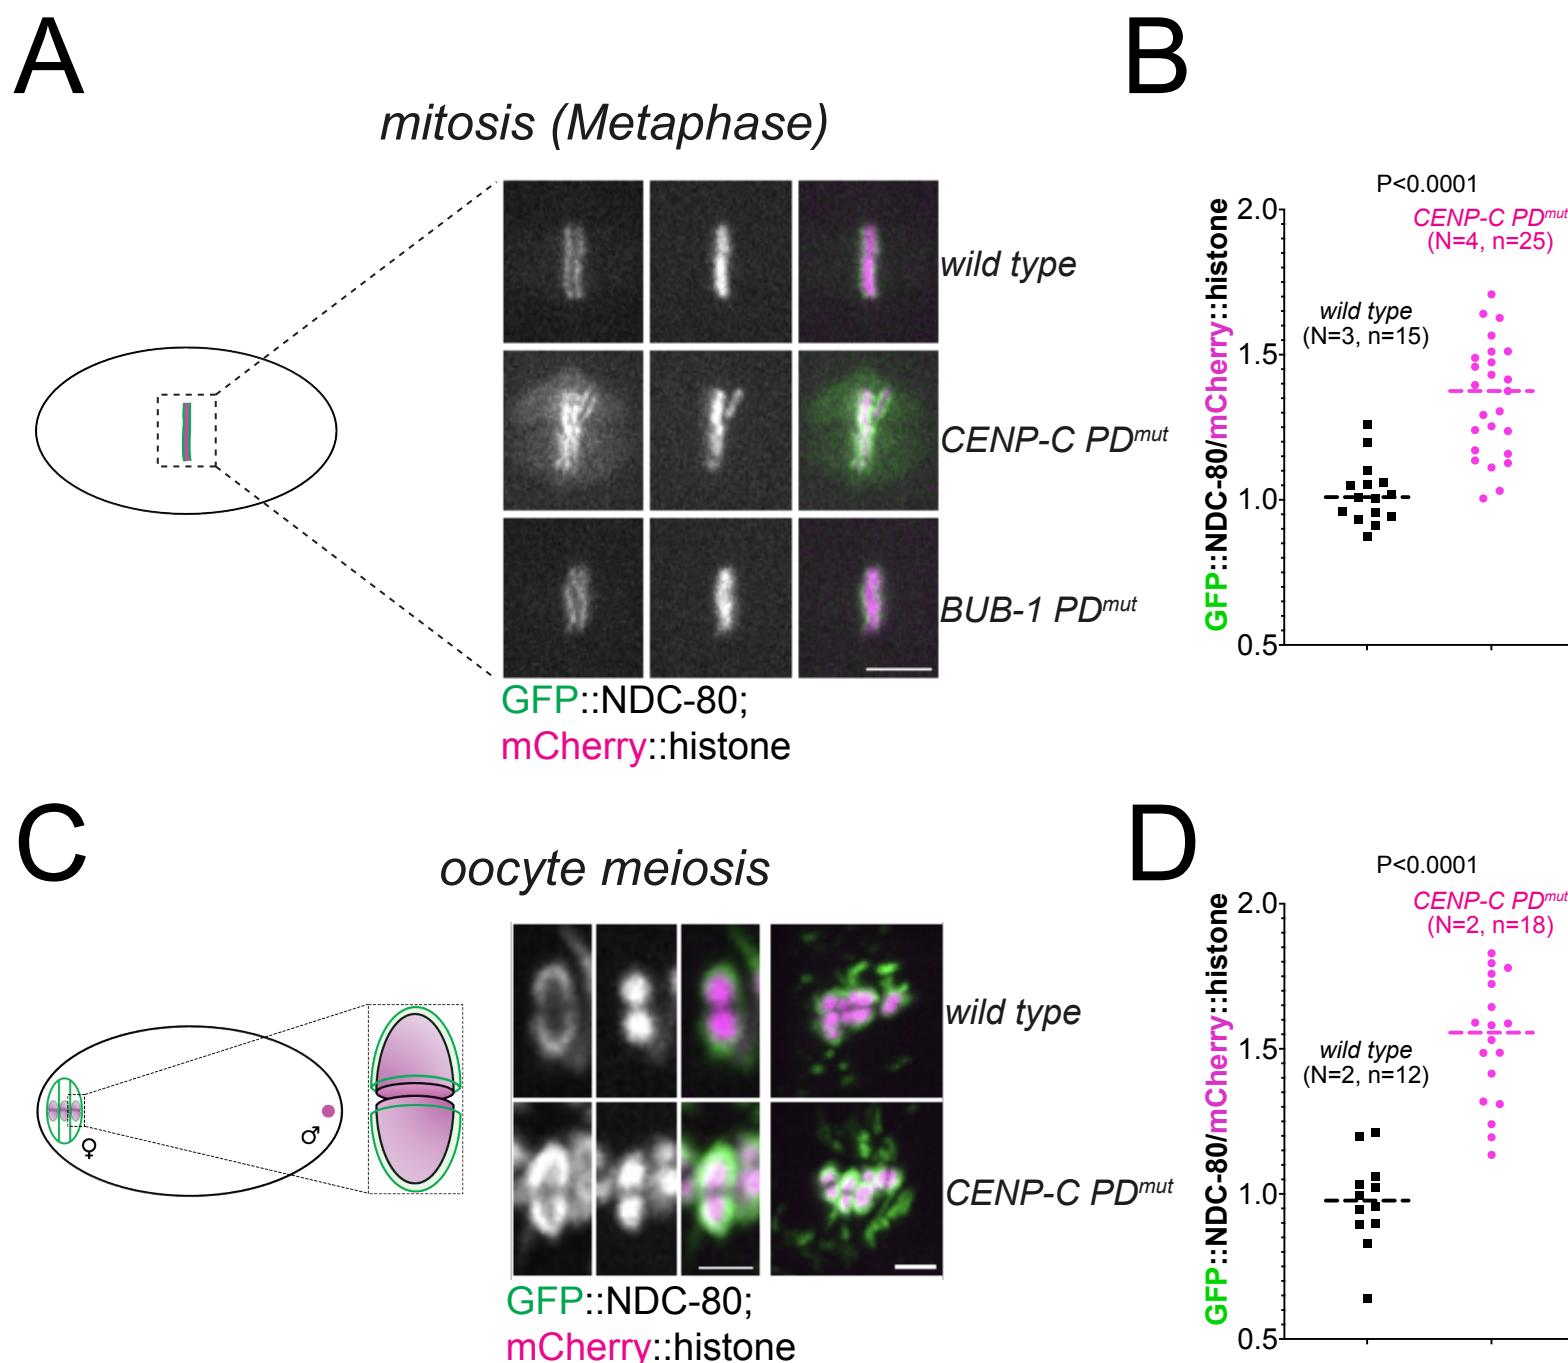

Fig. S2. NDC-80 kinetochore localisation in the CENP-C PD^{mut}. (A) GFP-tagged endogenous NDC-80 was followed throughout mitosis in wild type, CENP-C PD^{mut}, and BUB-1 PD^{mut}. Scale bar, 5 μ m. (B) Chromosomal NDC-80 levels at metaphase were quantified and normalised to the chromosome (histone) signal. Individual values are shown and the dashed line represents the median. ‘N’ denotes the number of experiments and ‘n’ denotes the number of embryos analysed. Wild type and CENP-C PD^{mut} embryos were compared using a non-parametric test (Mann-Whitney) and the P value is shown. (C) GFP- tagged endogenous NDC-80 was imaged during oocyte meiosis and a single image corresponding to prometaphase I is shown for wild type and polo docking mutant CENP-C (‘CENP-C PD^{mut}’). Scale bars, 2 μ m in the zoomed panel (left) and 3 μ m in right panel. (D) Chromosomal NDC-80 levels at prometaphase of Meiosis I were quantified and normalised to the chromosome (histone) signal. Individual values are shown and the dashed line represents the median. ‘N’ denotes the number of experiments and ‘n’ denotes the number of embryos analysed. Wild type and CENP-C PD^{mut} embryos were compared using a non-parametric test (Mann-Whitney) and the P value is shown.

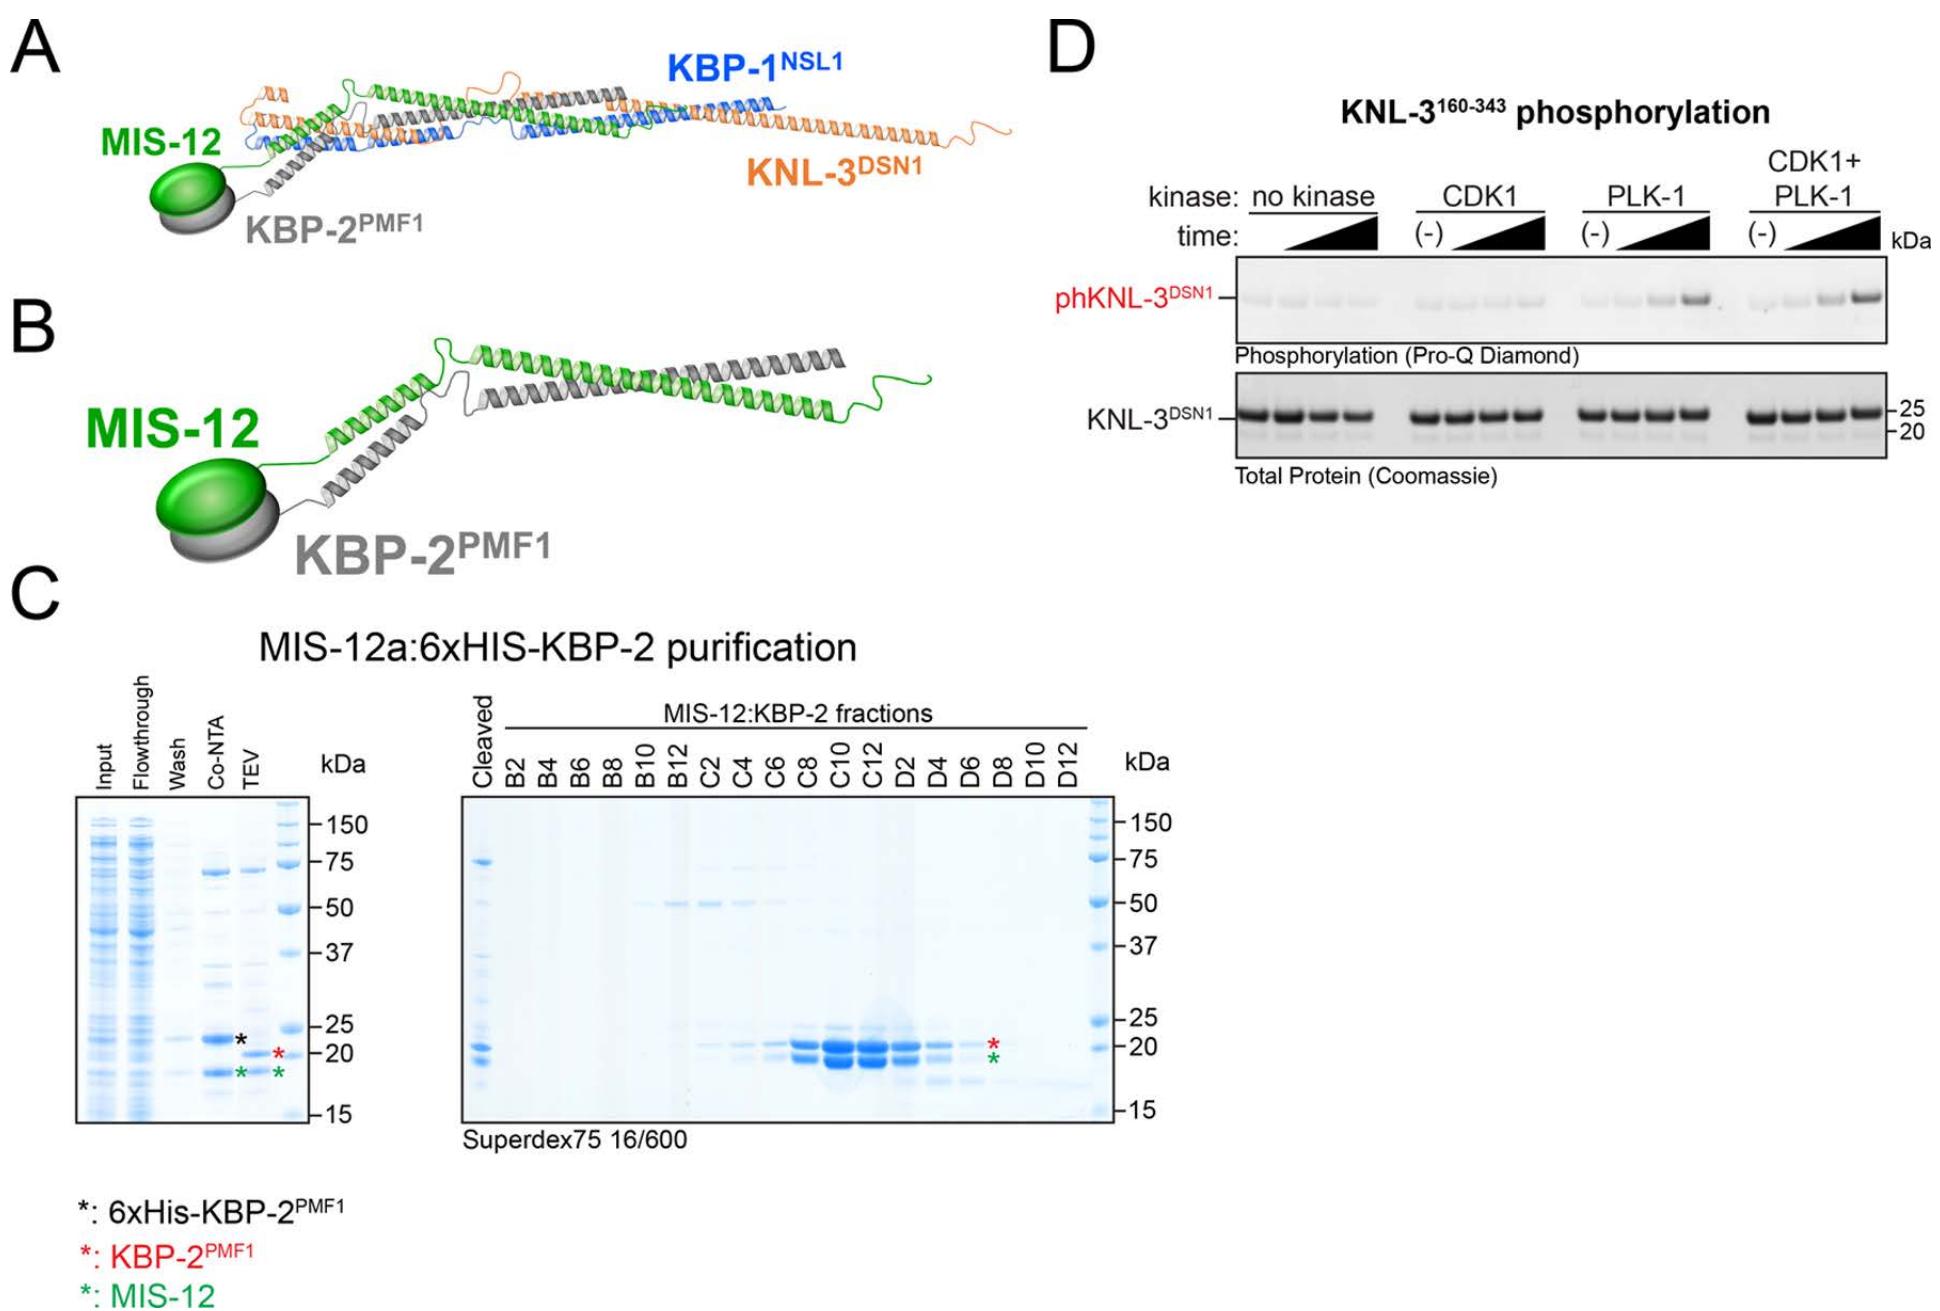

Fig. S3. Purification of the MIS-12:KBP-2PMF1 dimer. (A) Schematic of the full MIS-12 complex structure based on an AlphaFold2 prediction.

The disordered region of KNL-3^{DSN1} (aa 1-159) is not shown. (B) Enlarged image of the MIS-12:KBP-2^{PMF1} complex from (A). (C) Biochemical purification of the MIS-12:KBP-2^{PMF1} complex from bacteria. (D) Kinase assays were performed with the indicated protein kinases and KNL-3. Time points analysed were 15, 30, and 45 minutes. (D) Kinase assays were performed with the indicated protein kinase and KNL-3^{DSN1} as a substrate. Time points analysed were 0, 15, 30, and 45 minutes.

Table S1. List of phospho-sites identified from in vitro kinase assays

Movie 1. Embryo expressing PLK-1::sfGFP and mCherry::histone was imaged throughout mitosis. Movie corresponds to ‘wild type’ panels in Fig. 1B.

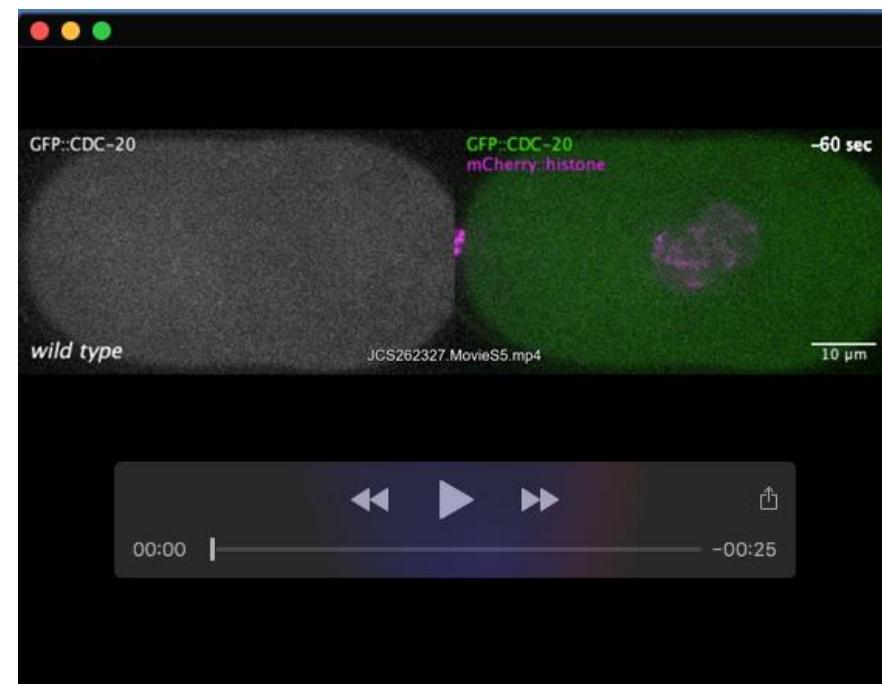

Movie 2. Embryo expressing PLK-1::sfGFP and mCherry::histone was imaged throughout mitosis. Movie corresponds to ‘cenp-c(RNAi)’ panels in Fig. 1B.

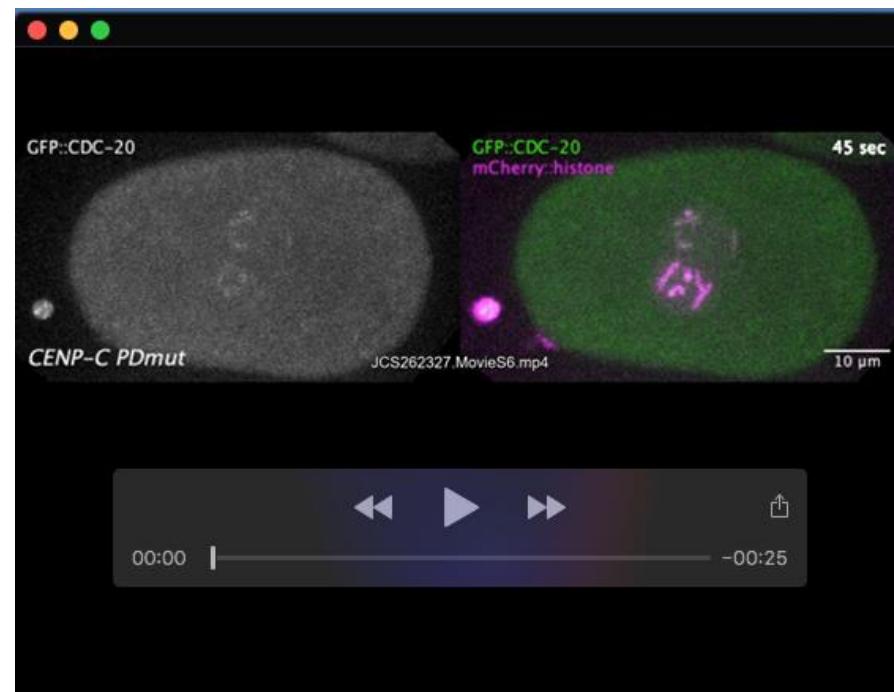

Movie 3. Embryo expressing PLK-1::sfGFP and mCherry::histone was imaged throughout mitosis. Movie corresponds to ‘wild type’ panels in Fig. 1F.

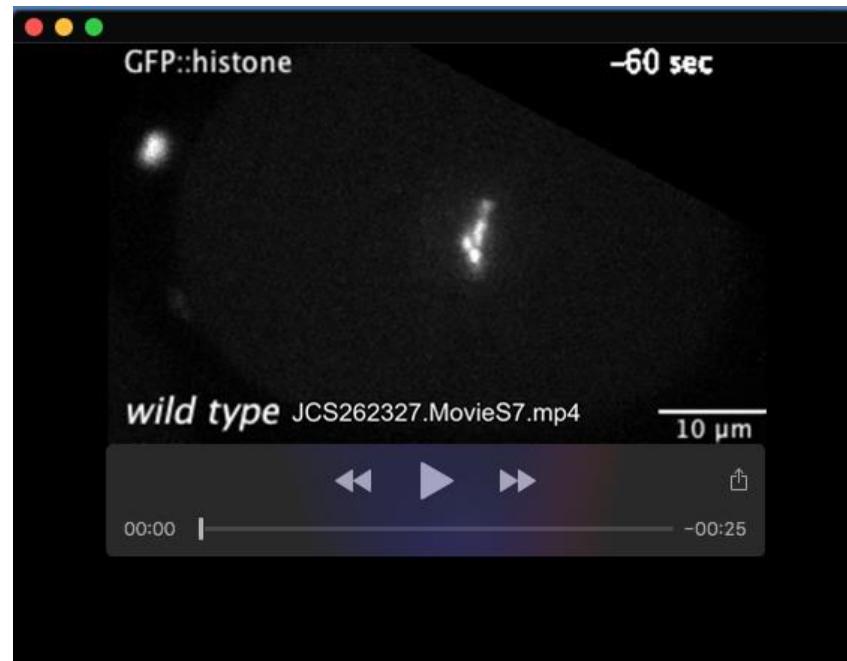

Movie 4. Embryo expressing PLK-1::sfGFP and mCherry::histone was imaged throughout mitosis. Movie corresponds to ‘CENP-C PD^{mut}’ panels in Fig. 1F.

Movie 5. Embryo expressing GFP::CDC-20 and mCherry::histone was imaged throughout mitosis. Movie corresponds to 'wild type' panels in Fig. 2A.

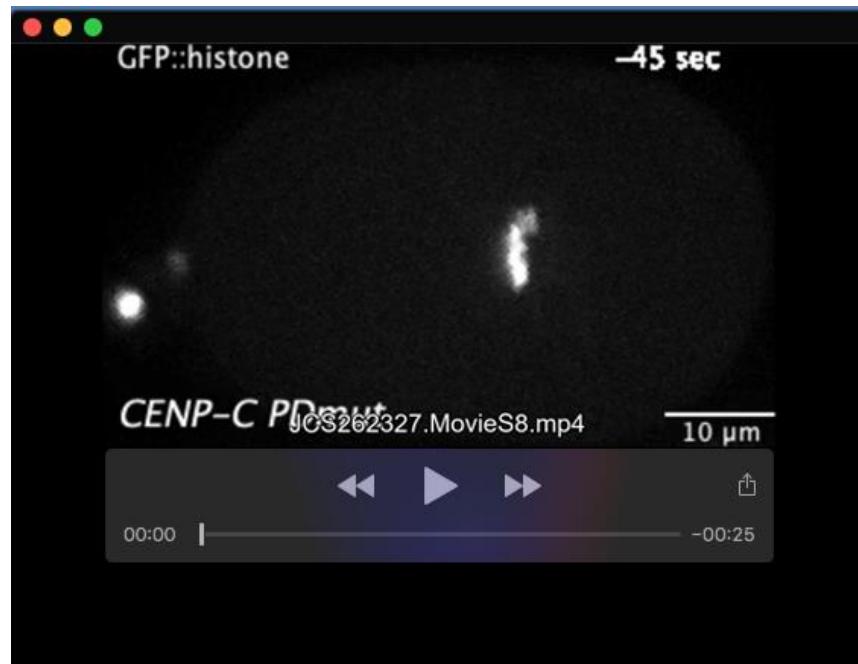

Movie 6. Embryo expressing GFP::CDC-20 and mCherry::histone was imaged throughout mitosis. Movie corresponds to 'CENP-C PD^{mut}' panels in Fig. 2A.

Movie 7. Embryo expressing GFP::histone was imaged throughout mitosis.

Movie corresponds to 'wild type' panels in Fig. 2D. The strain used here was FGP722.

Movie 8. Embryo expressing GFP::histone was imaged throughout mitosis.

Movie corresponds to 'CENP-C PD^{mut}' panels in Fig. 2D. The strain used here was FGP728.

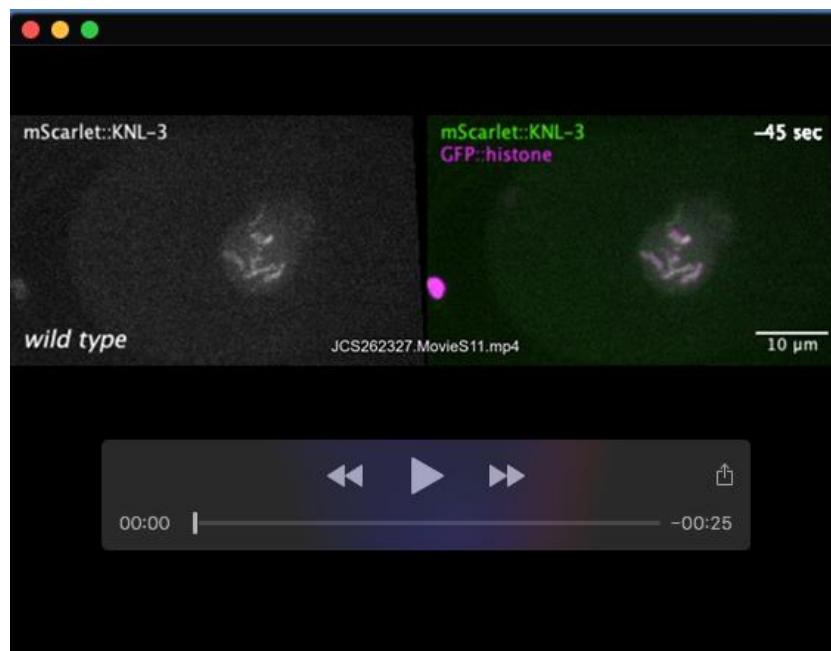

Movie 9. Embryo expressing GFP::histone was imaged throughout mitosis.

Movie corresponds to 'wild type' panels in Fig. 2E. The strain used here was FGP722.

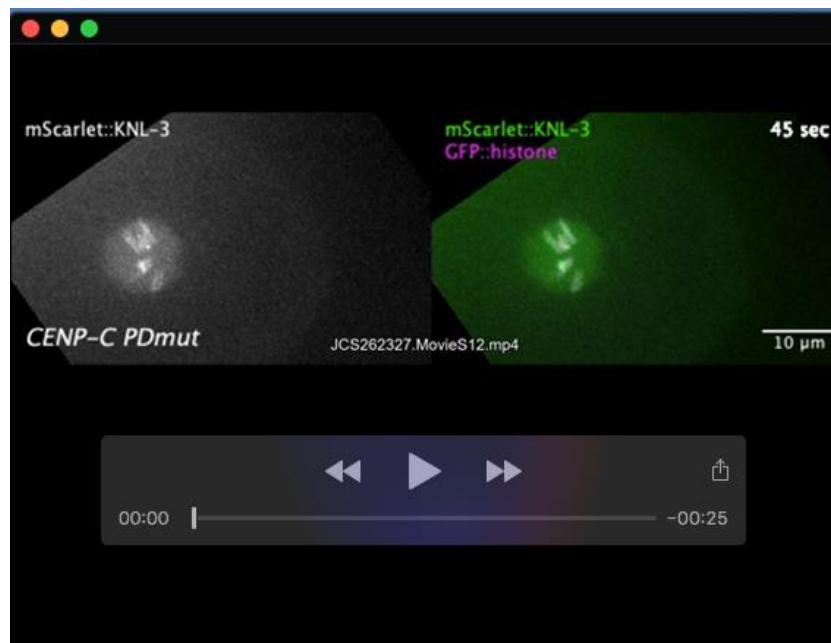

Movie 10. Embryo expressing GFP::histone was imaged throughout mitosis.

Movie corresponds to 'CENP-C PD^{mut}' panels in Fig. 2E. The strain used here was FGP728.

Movie 11. Embryo expressing Scarlet::KNL-3 and GFP::histone was imaged throughout mitosis. Movie corresponds to ‘*wild type*’ panels in Fig. 3B.

Movie 12. Embryo expressing Scarlet::KNL-3 and GFP::histone was imaged throughout mitosis. Movie corresponds to ‘*CENP-C PD^{mut}*’ panels in Fig. 3B.

Movie 13. Embryo expressing Scarlet::KNL-3 and GFP::histone was imaged throughout mitosis. Movie corresponds to '*BUB-1 PD^{mut}*' panels in Fig. 3B.

Movie 14. Embryo expressing GFP::histone was imaged throughout mitosis. Movie corresponds to '*wild type*' panels in Fig. 4A.

Movie 15. Embryo expressing GFP::histone was imaged throughout mitosis.

Movie corresponds to 'CENP-C PD^{mut}' + BUB-1 PD^{mut} panels in Fig. 4A.

Movie 16. Embryo expressing Scarlet::KNL-3 and GFP::histone was imaged throughout mitosis. Movie corresponds to 'wild type' panels in Fig. 4B.

Movie 17. Embryo expressing Scarlet::KNL-3 and GFP::histone was imaged throughout mitosis. Movie corresponds to 'CENP-C PD^{mut}' panels in Fig. 4B.

Movie 18. Embryo expressing GFP::histone was imaged throughout mitosis. Movie corresponds to 'BUB-1 PD^{mut}' panels in Fig. 4B.

Movie 19. Embryo expressing GFP::histone was imaged throughout mitosis.

Movie corresponds to 'CENP-C PD^{mut} ' + 'BUB-1 PD^{mut} ' panels in Fig. 4B.
