

Supplementary Figure 1. MiR-124 expression in primary and cultured Müller cells. After culturing rodent primary Müller cells, miR-124 expression decreased significantly with each passage as shown by an increased Ct (cycle threshold). After passage 4, miR-124 expression levels were similar to those of MIO-M1 cells (*indicates significance using a Student's t-test or two-way ANOVA with Sidak's post hoc test for multiple comparisons, $P < 0.05$ error bars indicate SEM, $n=3$).
