

Reviewer Comments

I had the pleasure of reviewing the manuscript titled "Systemic Vasoconstriction and Mortality in Patients with Heart Failure and Reduced Ejection Fraction: A Cohort of Patients Who Underwent Non-Invasive Hemodynamic Monitoring." The manuscript effectively discusses and evaluates the prognostic significance of non-invasively identified systemic vasoconstriction in patients with decompensated heart failure and reduced ejection fraction (HF_rEF). It should be free of grammatical and typographical errors. For instance, on line 141, the word "according" is missing a "to" after it. I recommend that the manuscript be reviewed for similar mistakes.
