

Relative risk of melanoma in patients with heart transplant compared to the general population:
Literature review

| PUBMED 7/31/24 | Population | Intervention | Comparison | Outcome |
|----------------|------------|--------------------------|------------|---|
| | | "Heart transplant"[Mesh] | | Skin Neoplasms"[Mesh] OR "Melanoma"[Mesh] |
| Total studies | 192 | | | |

| EMBASE 7/31/24 | Population | Intervention | Comparison | Outcome | Study |
|-----------------|------------|----------------------------|------------|---|---|
| | | Heart Graft + all synonyms | | Melanoma + all synonyms OR Skin cancer + all synonyms | RCT + Observational + retrospective + prospective |
| Total studies = | 102 | | | | |

Total studies: 192 (Pubmed) + 102 (EMBASE) = 294

Pubmed exclusions with filters: 0 filters = 0 excluded

Duplicates 26: 13 removed

Total remaining assessed for eligibility: 281

- Reason for exclusions:
 - Not an observational study
 - Not full text
 - Not heart transplant
 - Not Melanoma
 - Control group not the general population

Studies to be analyzed: 9
